FAROE ISLANDS

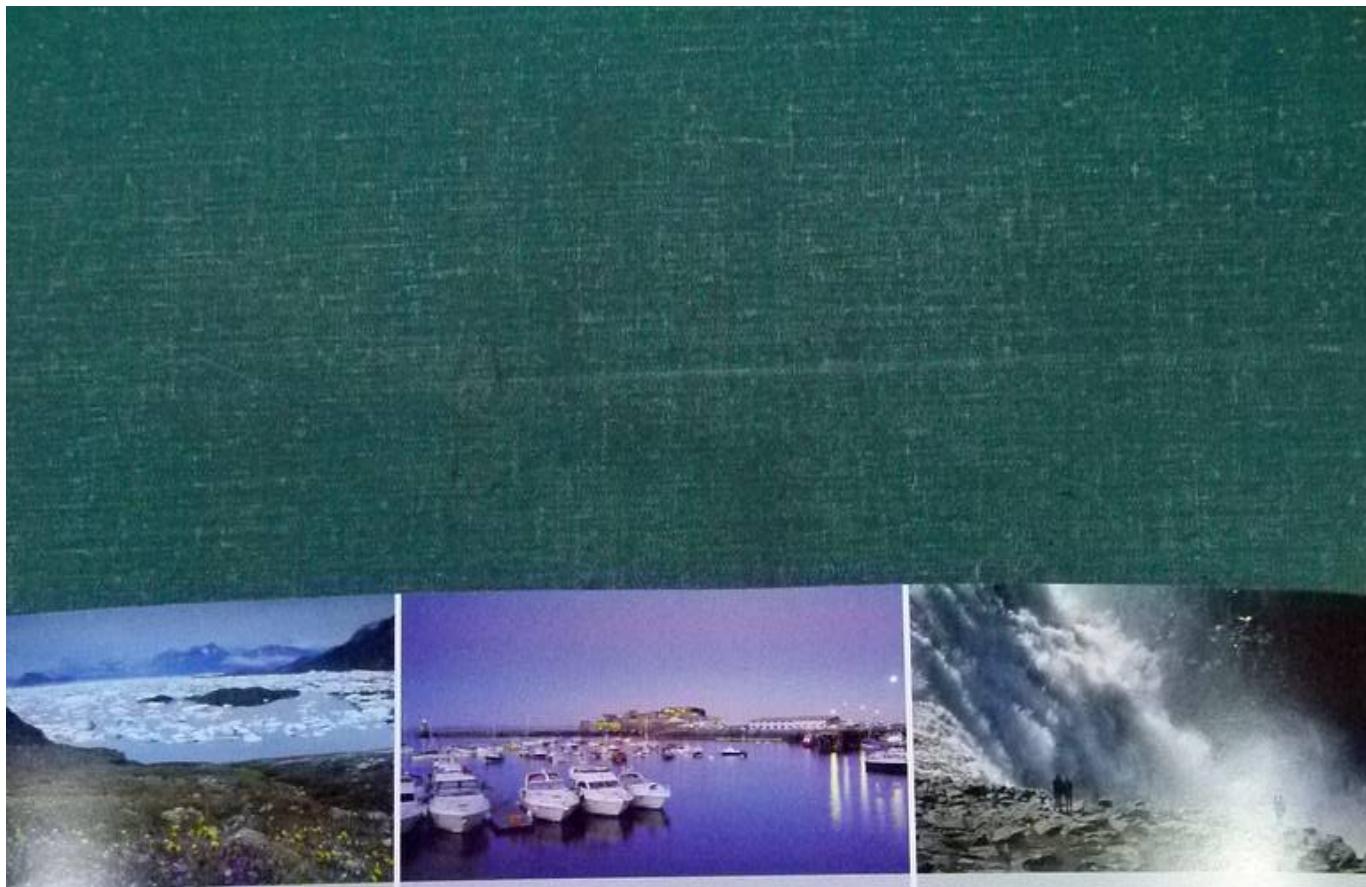

Situated in the heart of the Gulf Stream in the North Atlantic at 62°N and 7°W, the Faroe Islands lie northwest of Scotland and halfway between Iceland and Norway. With a population of only 48,000 inhabitants – besides 3.5 million birds and 80,000 sheep – the Faroes is one of the smallest nations in the world. The archipelago is composed of 18 rocky islands separated by narrow sounds and covering 1399 sq. Km (545.3 sq. Miles).

The weather can be characterized as enormously changeable. During the course of one day you can experience snow, sunshine and rain, wind and calm weather, thick fog and such atmospheric clarity that mountains in the distance of 50 km seems to be right in front of you.

GIBRALTAR

In ancient times, right through the ages of man and in the global conflicts of our own century, Gibraltar has guarded over the western Mediterranean, its unique position making it the focus of a continuous struggle for power. This spectacular rock, covering a land area of 6sq kilometres, is situated at the southern tip of Spain overlooking the strait of Messina. It is known as the Meeting Place of Continents. The sub-tropical climate is warm and welcoming throughout the year. The local people smile their welcome with friendly charm born from a blend of many cultures united in a unique community. Gibraltar's history and environment are captivating. From its formation millions of years before and the myths surrounding its dominant presence, to its status today as a tourism and business destination.

Foto nr.: 3

GREENLAND
Greenland is a place of contrasts, friendship, ice, ocean, hills, and mountains. The island is divided into two parts of the Arctic circle. The northern part of the island has no sunlight at all, whereas south of the Arctic circle the sun is visible every single day, all year round. It is the second largest island in the world. Greenland only covers one climatic zone, which of course has a big impact on it. More than 500 species of plants are to be found here.

The arctic summer is short but hectic, which means that Greenlandic landscape flowers from early July until August.

GUERNSEY

Guernsey and its three sister isles, Alderney, Sark and Herm, make up this small archipelago in the bay of St Malo. Guernsey's capital St Peter Port is said to be one of the most beautiful ports in Europe. Its terraces of orange-pantiled roofs, church spires and domes coupled with narrow shop fronts, hidden alleys and terraced streets can certainly rival many. Together with long golden beaches, rugged cliffs, inland wooded valleys, rolling fields and scatterings of farmhouses and parish churches, the Bailiwick is a tranquil spot right in the heart of Europe.

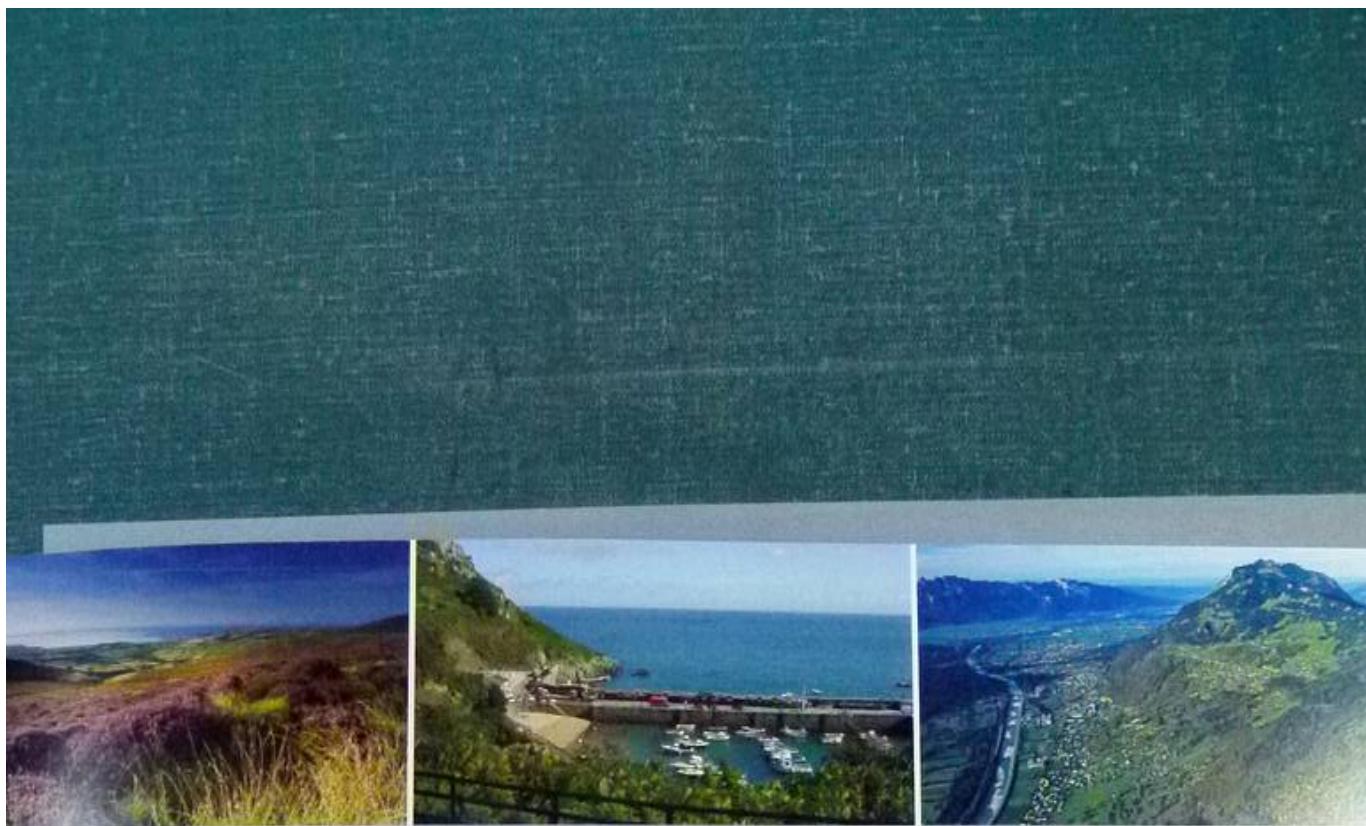

Our stamps offer a diverse range of subject matter, a wide array of talented artists producing beautiful, highly memorable issues.

ICELAND

Iceland has been called "the land of fire and ice". Steaming hot springs and rugged lava fields are to be found in an active volcanic country, which also is home to some of the most majestic glaciers in Europe. Lying in the path of the North Atlantic Gulf Stream the country has generally cool summers with spells of fine pleasant weather and long, dark winters. The natural beauty of the country lies in its spectacular volcanic, impressive river canyons, sandy wastelands, glaciers, rugged mountain and varied vegetation. The population of around 300,000 people mainly lives in the coastal areas with the largest concentration in and around the capital, Reykjavik. Icelandic culture and history is close at hand wherever you go, reaching centuries back in time to the first settlers which arrived some 1200 years ago.

Foto nr.: 4

ISLE OF MAN

The Isle of Man is situated in the middle of the Irish Sea, it is roughly 35 miles long by 13 miles wide, with around 100 miles of coastline. The Island has a land area of 227 square miles and a population of just under 80,000. Within the island's 227 square miles lies a rich diversity of flora and fauna. The national flower is the cushion - breathing life into every miles of unspoiled, open country, sandy beaches, woodland glens and 10,000 years of age. The highest peak is Snaefell ('Snowy Mountain') standing at 2,976 feet high and longest river, the Sulby at 13 miles. Some of the most stunning landscape can be seen while travelling on the Island's lovingly restored geotrap transport systems.

JERSEY

At just 45 square miles, Jersey is the largest land mass in the Channel Islands archipelago which may be found approximately 100 miles south of England and just 14 miles off the Normandy coastline of France.

The Island of Jersey is famed for beautiful country and coastal scenery, clean beaches and good surfing conditions. There are also plenty of restaurants with excellent menus to enjoy and the geographical location of Jersey ensures a favourable climate.

Jersey's north coast is steep and rocky where a handful of secluded bays and harbours may be found. 'Bonne Nuit' is one of these picturesque harbours. It is sheltered by the adjacent hills and a small number of fishing and pleasure boats take advantage of its protective moorings.

LIECHTENSTEIN

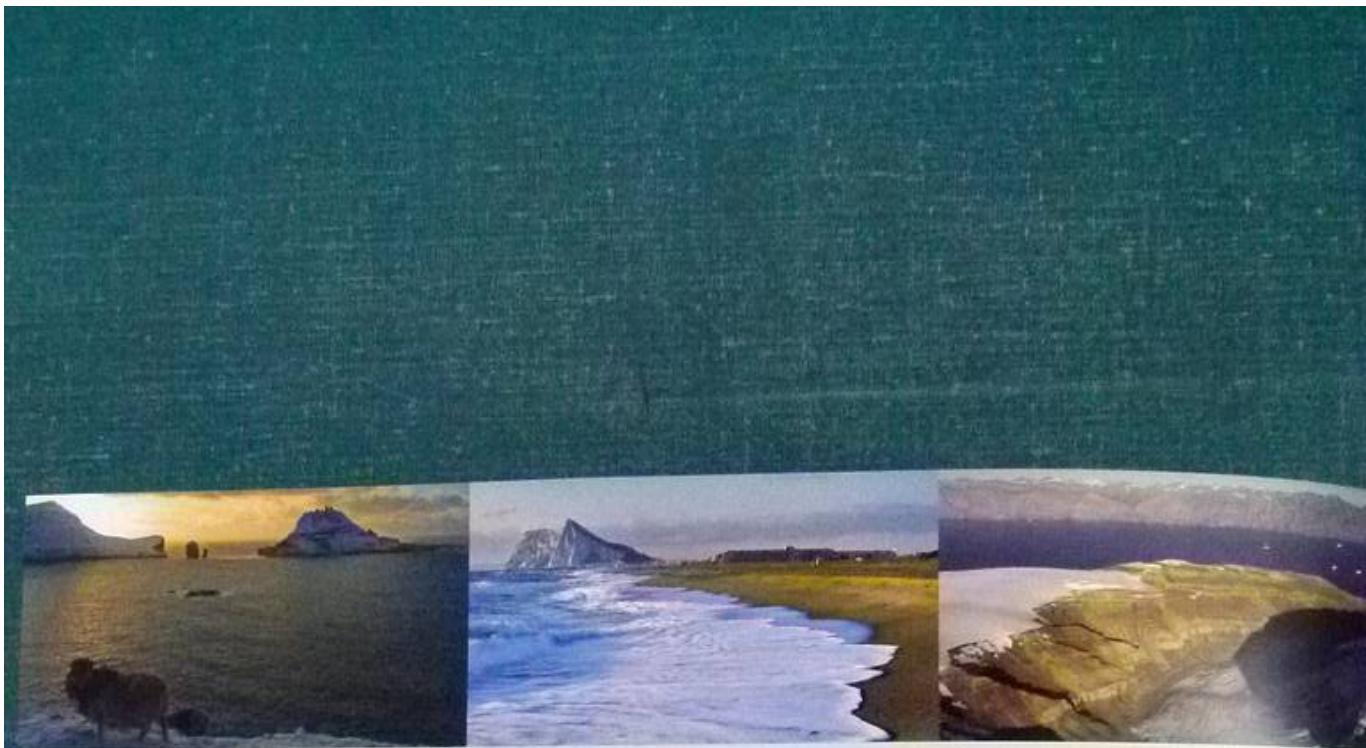

A green valley between the Rhine and majestic mountains. In fact, Liechtenstein is the only country situated entirely in the Alps. Seen from the air, the Principality's topography and unique geographic shape mirror its distinctive and diverse charm. Famous for its gastronomy, art museum and stamps, the place offers a great variety of small wonders to discover. Liechtenstein is industrial, open to the world and financially sound. The Principality counts 35,000 inhabitants and offers 30,000 working places. It is athletic in winter, cultural in summer – and vice versa. And it is a recreational area with 250 miles of long trails through forests, pastures and nature reserves. Climb one of its mountain peaks and you will always get a breathtaking view into the wide world.

Foto nr.: 5

Foto nr.: 6

FAROE ISLANDS

Each country has its own landscapes and in each country live people who not only think their children are the best, they also think their landscapes are the most beautiful in the world. Are people marked by the landscapes they live amongst?

Many poems and a lot of writing have been devoted to this much debated question. But there must undoubtedly be something in it – it is unavoidable that growing up on boundless steppes or among the skyscrapers of big cities will influence people's characters, each in its own way. And what does growing up on rocky islands surrounded by the endless sea do to people?

Unlike many other creatures on Earth, we are distinguished by incredible flexibility – a secluded life on a rocky island can certainly be exchanged for a busy urban life in the heterogeneous human sea of the continents.

GIBRALTAR

When you first see the Rock of Gibraltar, whether it is from the air, from the sea or from either the Costa del Sol or the western end of the Bay, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

For the person interested in natural history, whether it is on land or sea, Gibraltar is incredibly rich and full of surprises at any time of the year.

It is a combination of geographical location, climate and a unique history, together with the preservation of areas of habitat, that has made it a tiny paradise for wildlife.

GREENLAND

Greenland is hospitality, friendship, ice, ocean, hills, and overall unreal beauty.

Greenland is partitioned into two parts of the Arctic circle. To the north the midnight sun is present in the summer and darkness in the winter, whereas south of the Arctic circle the sun rises and sets every single day, all year round.

Despite its massive size, Greenland only covers one climatic zone, the Arctic zone, which of course has a big impact on nature. More than 500 species of plants are to be found here.

The Arctic summer is short but hectic, which means that the Greenlandic landscape flowers from early July until mid-August.

Foto nr.: 7

GUERNSEY

Using close to the north coast of France and bathed by the warm waters of the Gulf Stream, the island of Guernsey and its three sisters, Alderney, Sark and Herm, have a rich heritage and a timeless natural beauty.

With a spectacular rugged coastline, ribboned with stunning cliff path walks, sandy beaches, secret coves and pretty harbours, the islands are true gems. Sleepy lanes, lush, shaded valleys and patchwork fields are just some of their treasures.

Rich in wildflowers, these tranquil country lanes and rugged cliffs have inspired talented artists and photographers to create our memorable stamp issue which celebrates this beautiful landscape.

While Guernsey may be a thriving financial centre, with busy restaurants and new, luxury shore-side developments, go inland or walk along the coast a few minutes and you can rediscover its timeless beauty.

ICELAND

Vatnajökull National Park was established by law in 2008. It is the largest National Park in Europe, covering around 15,000 km² (15% of the surface of Iceland), including all of Vatnajökull, the largest glacier in Europe, and also Skálfell, Jökulsárlón and surrounding areas. Unique and diverse geological landscapes are within the vicinity of this National Park with spectacular land formation. Skálfell is one of Iceland's distinctive natural attractions of extravagant beauty. Nowhere in the country is the natural variety and contrast as abundant and evident. Vast glaciers, forbidding crevasses, canyons, hanging valleys, ice-cold mountain streams flowing in ravines with luxuriant vegetation and wild flowers, basalt columns of most unusual configurations and other natural marvels have created this tellurian spectacle. Skálfell is also endowed with more sunshine hours than other parts in the south, as well as mild weather since it is shielded from rain and wind by the Öræfajökull glacier.

ISLE OF MAN

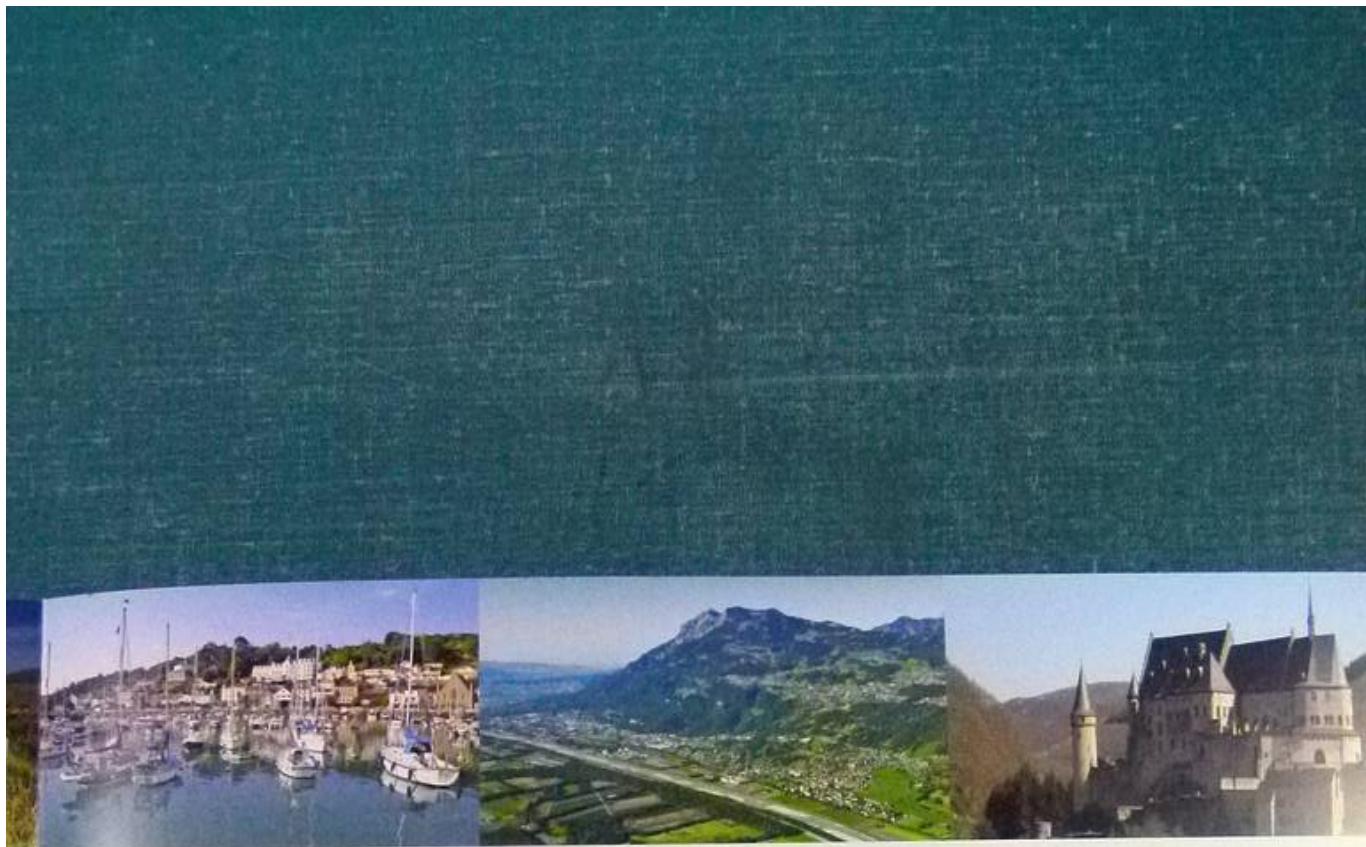

Whilst Archibald Knox is best known internationally as a designer of metalwork, in the Isle of Man he is remembered mostly as a watercolourist. Although he rarely signed or dated his paintings his unique style is easily identifiable to collectors. He exhibited at the Whitstable Art Gallery, London in 1921, 1923 and 1925. It was during that his work was spotted by the director of the National Gallery of Canada, and in 1926 he was invited to exhibit 80 watercolours at the National Gallery in Ottawa. His one-man exhibition travelled across Canada. Knox never sold his watercolours, they were only given as close friends as gifts.

He regarded them as his studies in colour; it is said in the Isle of Man that "He could paint the wind."

Foto nr.: 8

JERSEY

At just 15 square miles, Jersey is the largest land mass in the Channel Islands archipelago which may be found approximately 100 miles south of England and just 14 miles off the Normandy coastline of France.

The picturesque harbour and surrounding area at St Aubin is situated at the western end of the long, sandy curve of St Aubin's Bay on the south of the Island. St Aubin was Jersey's main commercial port until St Helier harbour became the Island's premier docking facility in the early 19th century. Until this time, St Aubin had been a bustling port with various merchant's premises along the bulwarks and shipyards catering to their marine needs.

Today, St Aubin is still a busy village with an art gallery, shops, marine chandlers, restaurants, hotels and bars overlooking the harbour which is now filled with yachts and motor boats instead of the merchant ships of yesteryear.

A beautiful and popular location for visitors and locals alike.

LIECHTENSTEIN

When Prince Johann Adam Andreas of Liechtenstein bought the two dominions, the Lordship of Schellenberg (in 1699) and the County of Vaduz (in 1712), he reunited two territories which for centuries had been separated: the "Oberland" (the Upper Country) in the South and the "Unterland" (the Lower Country) in the North. In 1719 they were elevated to the Imperial Principality of Liechtenstein. Today this former separation is still noticeable at elections with the "Oberland" sending 15 Members to Parliament and the "Unterland" 10. The Chapel of St. Mamerta which is situated in Triesen was built in the 9th or early 10th century and is the oldest chapel in Liechtenstein. It has always been one of the most famous landmarks of the "Oberland".

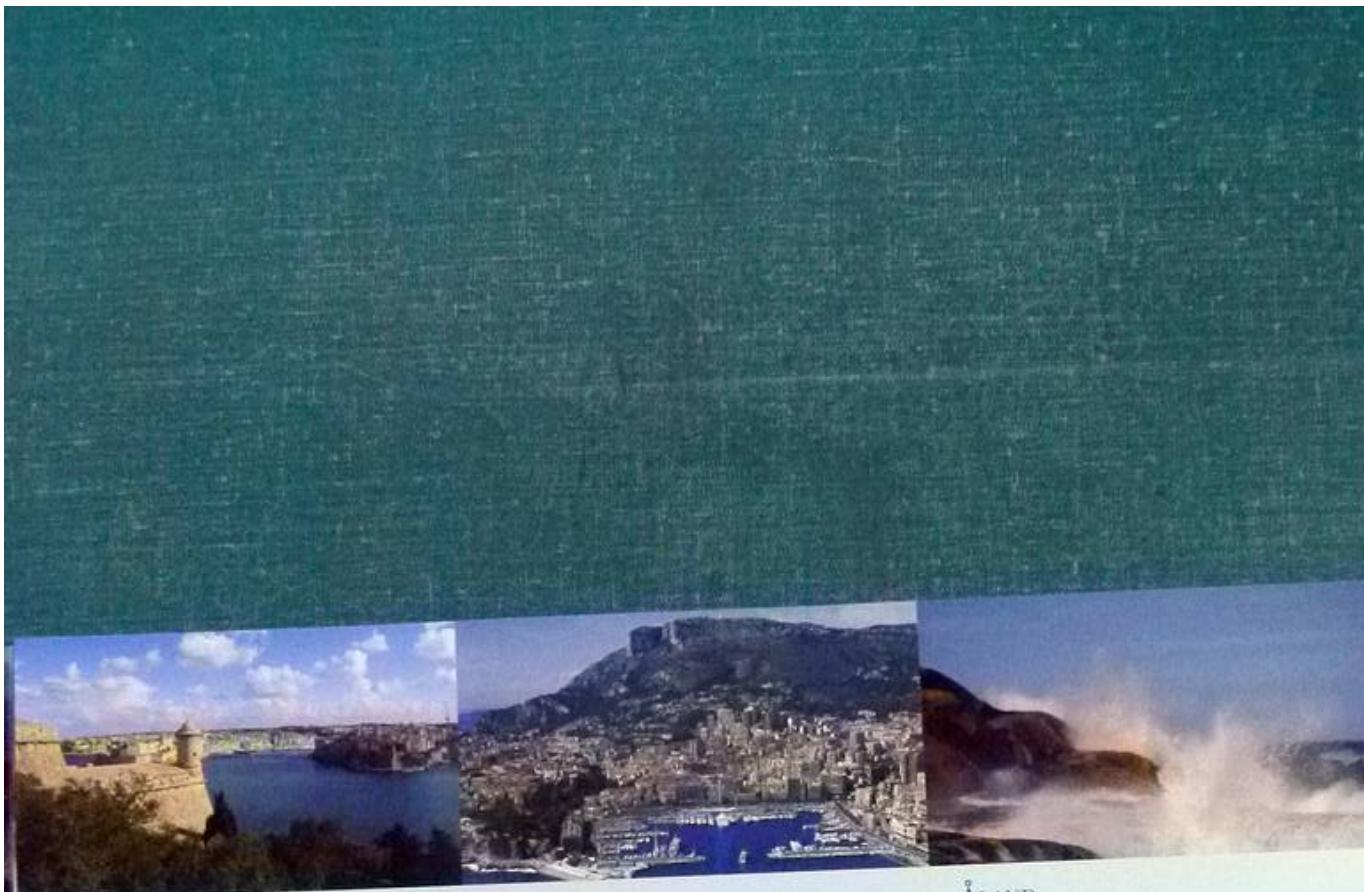

LUXEMBOURG

The Grand Duchy of Luxembourg, a constitutional monarchy, is an independent sovereign state, tucked between Belgium, France and Germany. The country is 23 km long and 52 km wide, encompassing an area of 23 square kilometres with a population of 484,000 inhabitants (official estimate 2008).

Vianden Castle was constructed between the 11th and 13th centuries on the foundations of a Roman 'castellum' an Carolingian refuge. It is one of the largest residence of the romanesque and gothic periods in Europe. Until beginning of the 15th century it was the seat of the counts of Vianden. In 1977 it was transferred to State ownership and restored to its former glory.

Foto nr.: 9

MALTA

Malta is a small and densely populated European republic state, comprising an archipelago of islands situated in Southern Europe, 95 km (58 miles) off the coast of Sicily and 300 km (186 miles) north of Libya, giving the country a warm, Mediterranean climate. Malta has a population of 400,000 and its capital city is Valletta.

Throughout much of its history, Malta has occupied a strategic location in the Mediterranean Sea. It was conquered and ruled by a sequence of powers including the Phoenicians, Romans, Arab Arogouese, Knights of St John, the French and English, before achieving independence from the United Kingdom in 1964. It joined the European Union in 2004 and is a member of the Commonwealth of Nations and also the United Nations. It joined the eurozone in 2008.

MONACO

Nestled on the French Riviera, the Principality of Monaco is one of the smallest countries in Europe, covering only 195 hectares and counting 35,000 inhabitants. H.S.H. Prince Albert II holds the destiny of this Sovereign State led by the Grimaldi Dynasty for more than 700 years. Since 1993, the Principality has been an official member (183rd) of the United Nations. A hundred of non-polluting industries and more than one thousand companies from the tertiary sector testify the expansion of a reliable activity.

Visitors are drawn to Monaco's Mediterranean climate, its luxurious hotels and world-renown events such as the Rallye

or the Formula 1 Grand Prix. Arts and culture are also widely

celebrated with the Monte-Carlo Philharmonic Orchestra,

the Monte-Carlo Ballet Company.

The stamp features a watercolour of the Italian artist Riso

Golinelli representing a genuine square of Monaco-Ville, the old town.

ÅLAND

Åland is an autonomous and demilitarized island province situated in the Baltic Sea between Finland and Sweden. Almost half of the population of 27,000 lives in Mariehamn, the only town in Åland.

Åland's nature has an abundance of variation alternating between coniferous forests, groves of deciduous trees, picturesque meadows and a majestic coastline. Large parts of Åland's archipelago of more than 6,500 named islands are completely uninhabited - unspoiled nature with a spectacular coastline of smooth cliffs and salty granite. Secluded coves and an extended archipelago surrounded by limpid waters form the northern coastline of Åland.

The stamp shows the view from the highest hill in Åland, Orndals klint, located in the municipality of Saltvik. The elevation of Orndals klint is 128.8 metres above sea level.

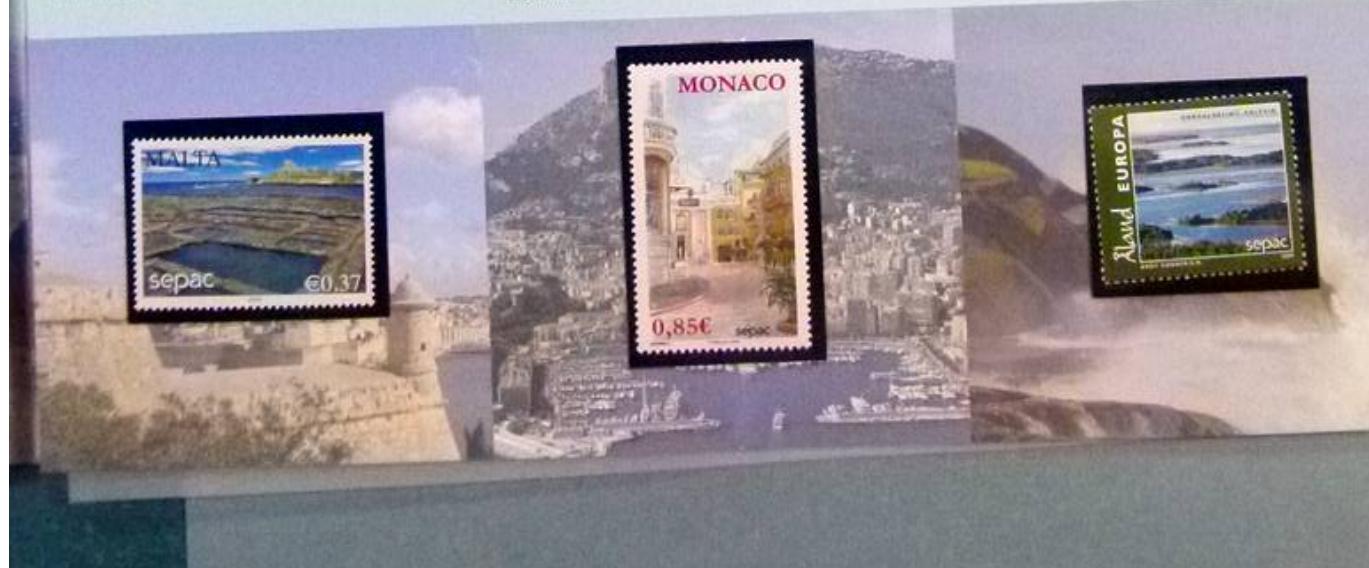

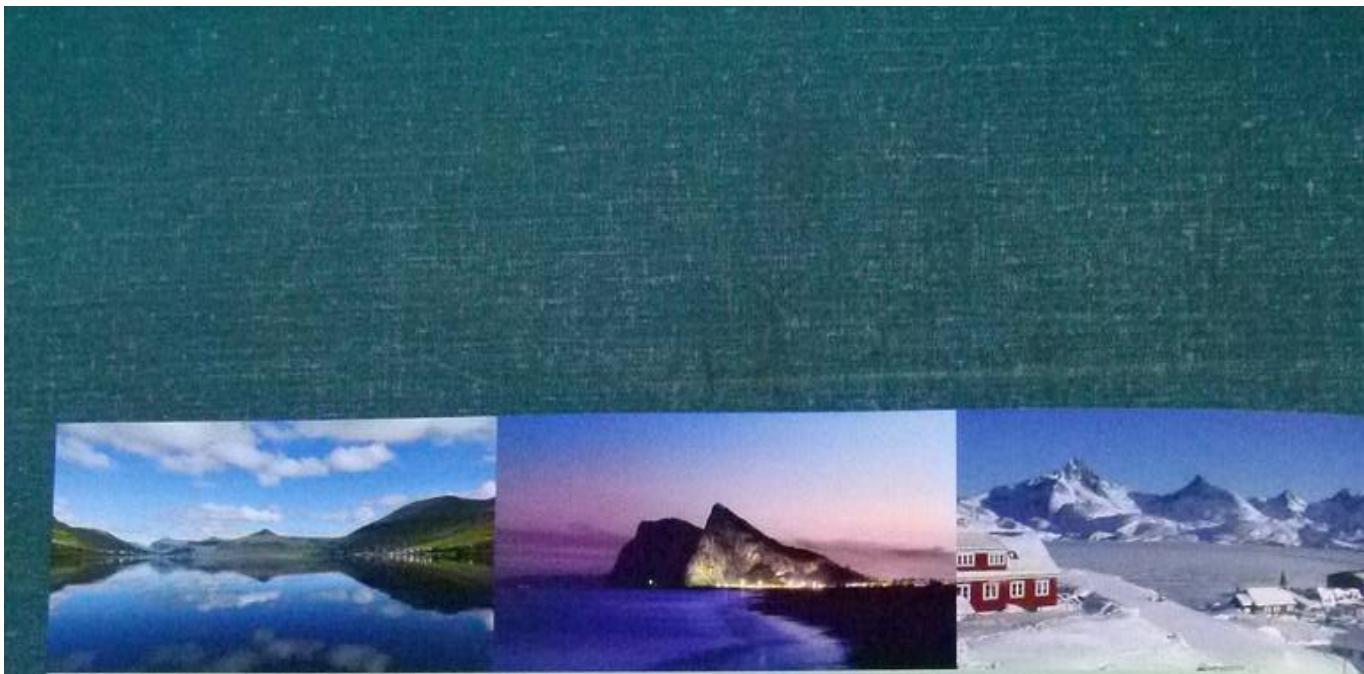

Foto nr.: 10

FAROE ISLANDS

The Faroe Islands are among the most visually and spiritually alluring islands I've visited on my travels to many wilderness places in the world, and part of what makes them special is the feeling of closeness to the land that they generate, being small windswept islands in the middle of the vast and cold North Atlantic Ocean.

I first saw the Faroe Islands while traveling between Iceland and Norway. What initially impressed me were the striated layers upon layers of the pyramidal shaped mountains rising out of the middle of the ocean. I had never seen such visually unique and appealing mountains such as these, and immediately felt the land calling to me, beckoning me to come explore and stand on its narrow mountain ridges with the white-capped ocean channels surrounding me on all sides.

Johnathan Esper, Wilderness photographer

GIBRALTAR

When you first see the Rock of Gibraltar, whether it is from the air, from the sea or from either the Costa del Sol or the western end of the Bay, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

For the person interested in natural history, whether it is on land or sea, Gibraltar is incredibly rich and full of surprises at any time of the year.

It is a combination of geographical location, climate and a unique history, together with the preservation of areas of habitat, that has made it a tiny paradise for wildlife.

GREENLAND

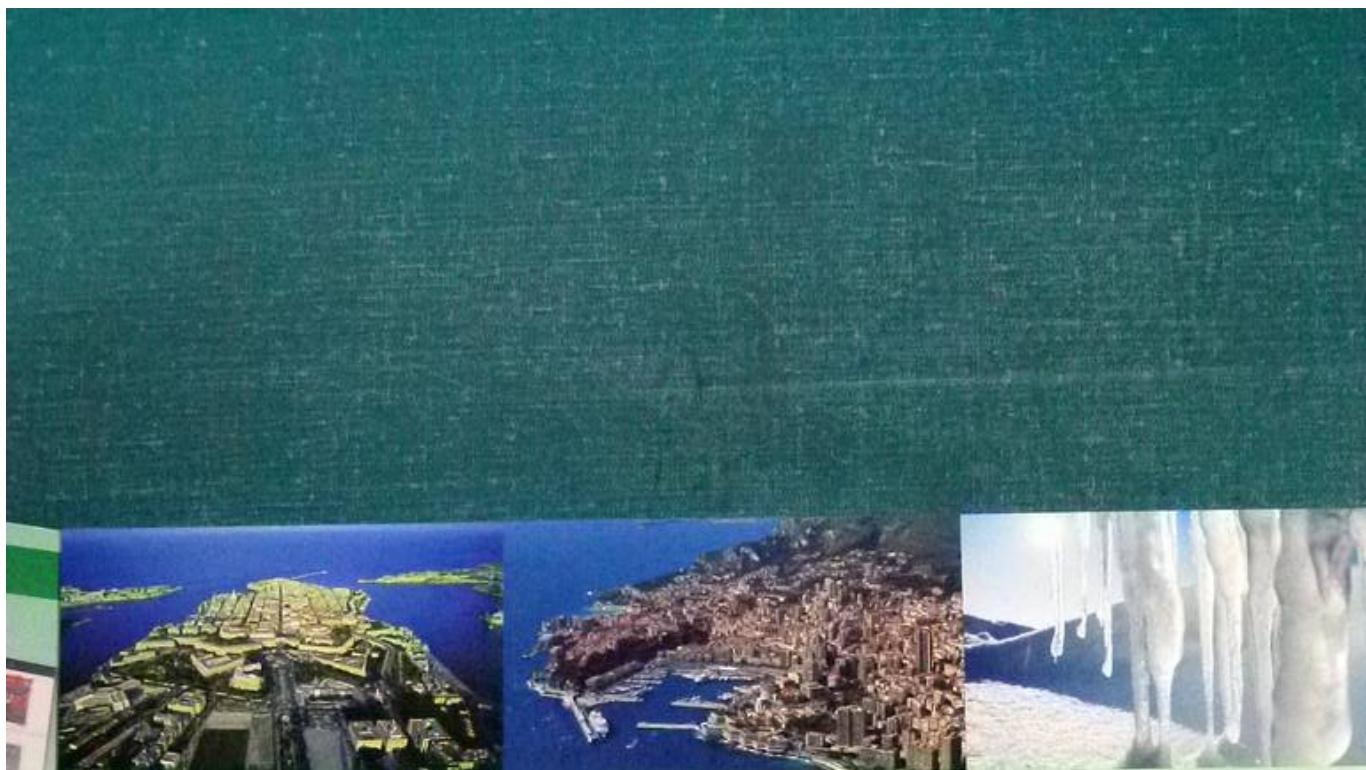

Greenland is the world's largest island with an area around 2.2 million sq. km, but only some 110,000 sq. km are not covered by ice. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in South Greenland, the climate is arctic and the average temperature during the summer months of the year does not exceed 10°C.

Greenland enjoys self-government within a union with Faroe Islands and Denmark. In 2009, Greenland voted to transfer more powers to the local government. This became effective the following year with the Danish government in charge only of foreign affairs, defense and financial policy.

With a population of 56,452 (January, 2010 estimate) it is the least densely populated dependency of countries in the world.

Foto nr.: 11

MALTA

Malta's strategic location in the middle of the Mediterranean Sea has given it a rich and varied history. Nearly every major power who dominated the region has left a cultural imprint: the Phoenicians, Romans, Arabs, Aragonese, Knights of St. John, the French and, finally, the British. It achieved independence from the United Kingdom in 1964, became a Republic in 1974 and joined the European Union in 2004 - adopting the Euro as its national currency in 2008.

This unique history has given Malta a wealth of subjects and themes to depict in its postage stamps. The first Malta stamp was issued on 1 December 1860 and, since then, philatelic issues have been popular with both local and oversea collectors.

MONACO

The Principality of Monaco is the second smallest country, by size, in the world. It is located in Southern Europe on the Northern central coast of the Mediterranean Sea. It is the most cosmopolitan state in the world with 119 nationalities living on its 2 square kilometre territory. Monaco is a constitutional monarchy, headed by H.S.H Prince Albert II. The Government and the Municipality have separate and distinct roles but there is no geographical distinction between the State and the City of Monaco.

The Mediterranean Sea is essential for the Principality of Monaco as the country is bordered by the Sea. Monaco has always been engaged in the protection of the environment. Since 2006, the Prince Albert II Foundation has supported more than 130 environmental projects around the world.

ÅLAND

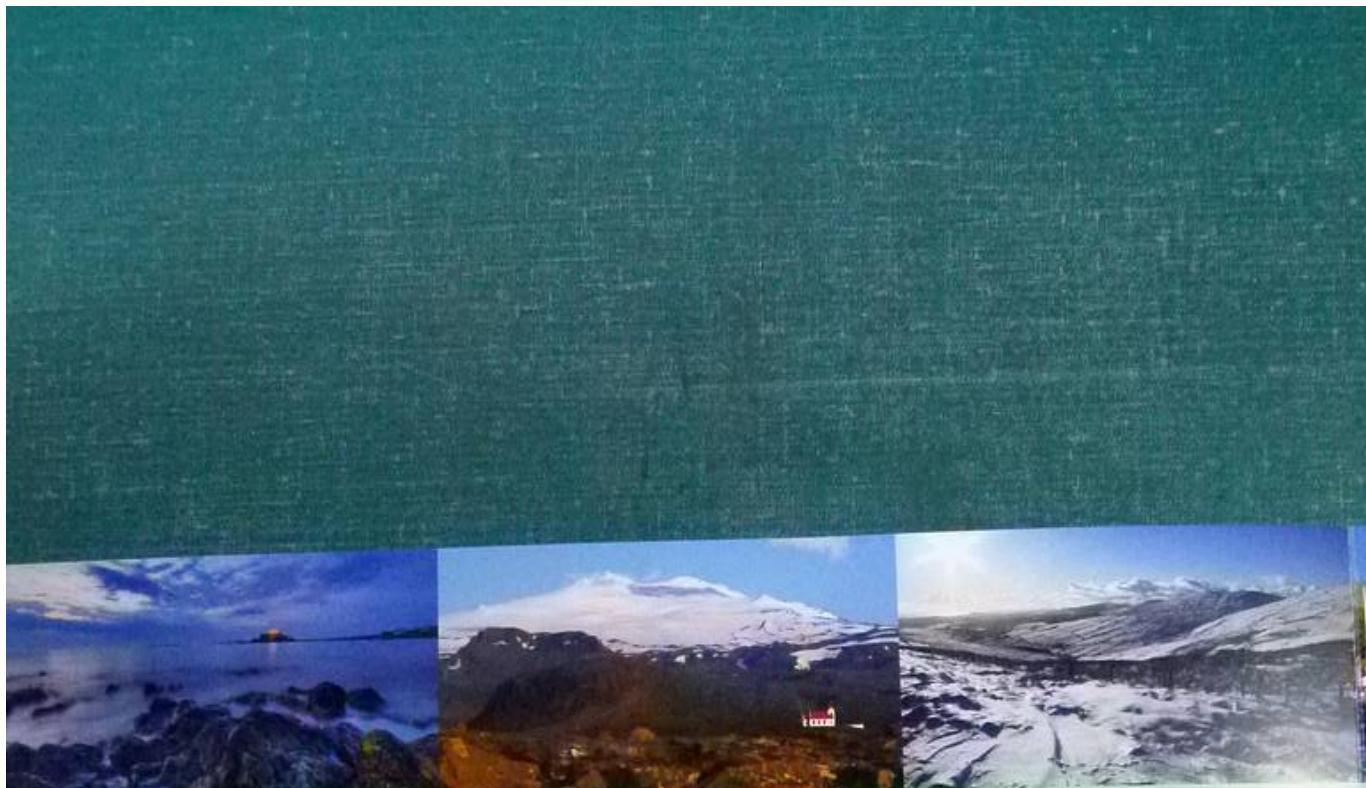

Åland is an autonomous and demilitarized island province situated in the Baltic Sea between Finland and Sweden. Almost half of the population of 27 000 lives in Mariehamn, the only town in Åland.

The rich diversity of the Åland nature is characterized by coniferous forests, groves of deciduous trees, picture meadows and barren rocks. Åland consists of a small archipelago of more than 6 500 named islands, the majority of which are uninhabited. A large part of the archipelago is unspoiled consisting of rocks beautifully rounded by time and cliffs sprayed with a mist of saltwater. Secluded bays and an extended archipelago surrounded by limpid water form the northern coastline of Åland.

The scenery featured on the stamp was photographed at Hammarudda in the municipality of Jomala.

Foto nr.: 12

GUERNSEY

Lying close to the north coast of France and bathed by the warm waters of the Gulf Stream, the island of Guernsey and its three sisters, Alderney, Sark and Herm, have a rich heritage and a timeless natural beauty.

With a spectacular rugged coastline, ribboned with stunning cliff path walks, sandy beaches, secret coves and pretty harbours, the islands are true gems. Sleepy lanes, lush, shaded valleys and patchwork fields are just some of their treasures.

Rich in wildflowers, these tranquil country lanes and rugged cliffs have inspired talented artists and photographers to create our memorable stamp issue which celebrates this beautiful landscape.

While Guernsey may be a thriving financial centre, with busy restaurants and new, luxury shore-side developments, go inland or walk along the coast a few minutes and you can rediscover its timeless beauty.

ICELAND

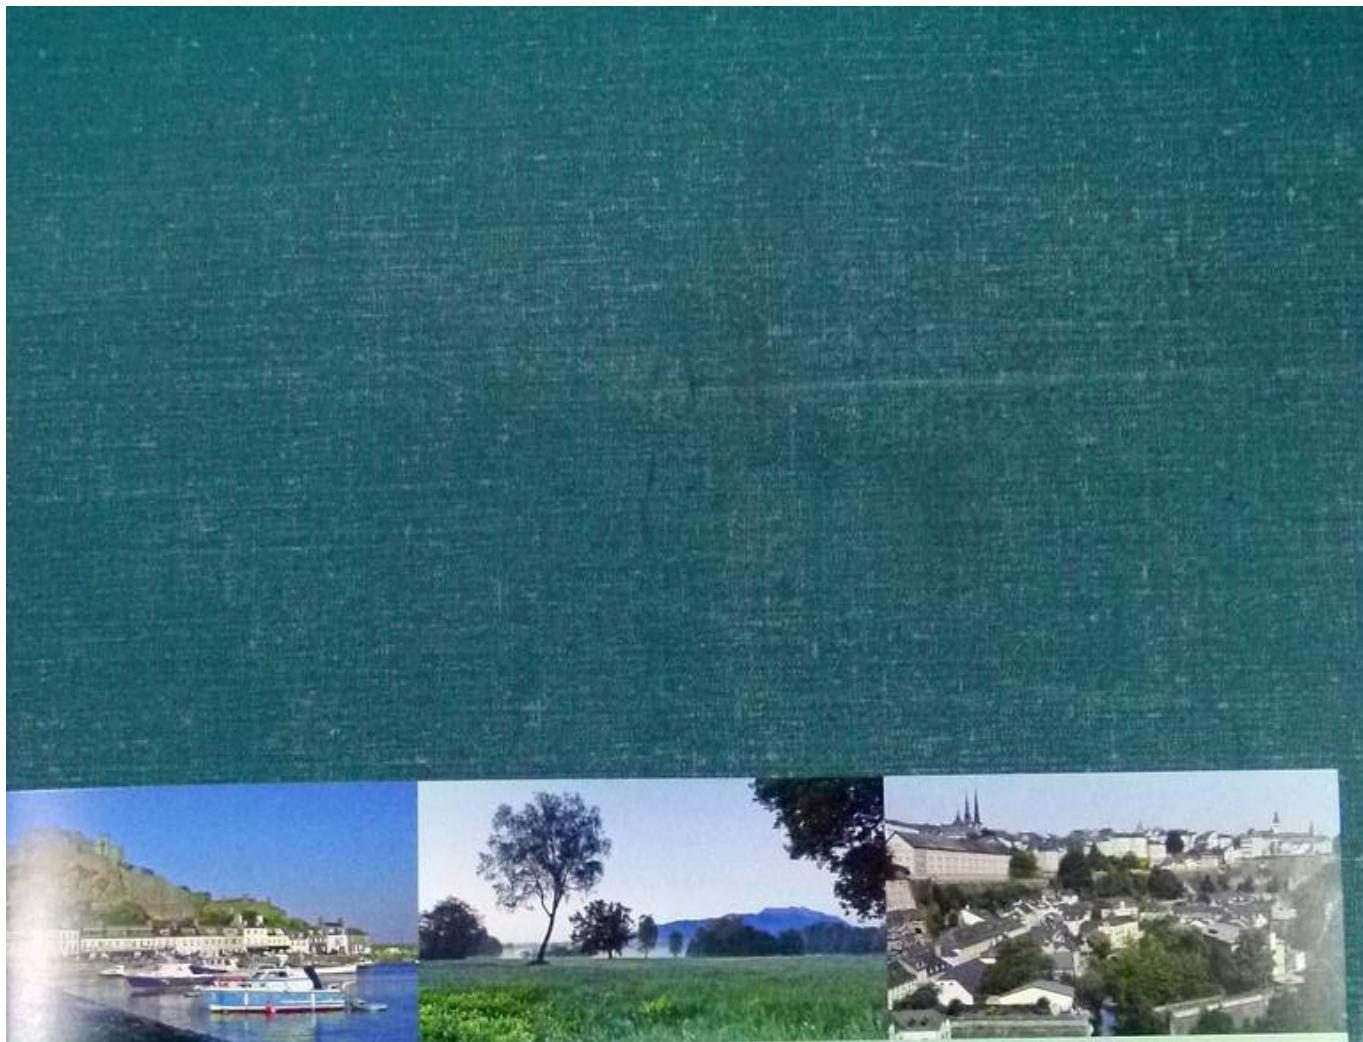

The Snæfellsjökull National Park was officially established on the 28th of June 2001. Within its boundaries are highly interesting geological phenomena and historical sites. According to geological findings, the volcanic drift belt crossed the Snæfells Peninsula about 6 million years ago. Rugged lava fields are found in the westernmost part of the peninsula. During the earlier centuries there was much activity along the coastline. Wherever natural conditions permitted there were fishing outposts, where hundreds, if not thousands, of fishermen, who frequented the rich fishing grounds near the coast, used open rowboats. The mountain Snæfellsjökull is one of the most famous sites of Iceland, primarily due to the science fiction novel "The Journey to the Centre of the Earth" (1864) by Jules Verne, in which the protagonists find the entrance to a passage leading to the center of the earth on Snæfellsjökull.

ISLE OF MAN

More than anything else the Isle of Man is an island that gives you choice – beautiful scenery, relaxation, adventure, fun, and culture. You can explore and ride Victorian steam trains and watch wildlife on land and sea. You can even watch one of the most famous sport events in the world – the legendary TT races which this year celebrated its 100th centenary. If you wish to get out and about in the open spaces and clean fresh air, you'll feel comfortable at home as walking, golf and cycling are some of our most popular activities. We are a proud nation and preserve our traditions and history, a story which began well over a thousand years ago.

Foto nr.: 13

JERSEY

Although part of the British Isles, Jersey is found just 14 miles off the coast of Normandy, France and is the largest island of the Channel Islands.

Jersey Post's 2011 SEPAC stamp features St Ouen's Bay which dominates the west coast of Jersey. The natural curve of the bay is home to some of the best surf conditions in Europe providing the venue for international competitions on a regular basis.

The area of coastal sand dunes that border the beach, has been designated a Site of Special Interest and is one of the most important habitats in Jersey with an abundance of wild flora and fauna.

Jersey has a long history of being invaded and many fortifications have been built around the Island over the years. Offshore in St Ouen's Bay stands La Rocco Tower, built during the Napoleonic Wars as a defence against the threat of French invasion.

LIECHTENSTEIN

The Liechtenstein "Unterland" (the Lower Country) is situated in the north of the Principality and with its 35 km² it is the smaller of the two territories that make up the whole country. In its five communes Eschen-Nendeln, Mauren-Schaanwald, Gamprin-Benders, Ruggell and Schellenberg live about 12,500 people, which is almost a third of the Liechtenstein population. In Ruggell, the northernmost village of Liechtenstein, we find the nature reserve of the Ruggeller Riet, a charming peatland dating back 10,000 years. Its most famous plant is the Siberian Iris which in May and June turns the whole area into one blue carpet. But this peaceful place which has been under conservation for many years is also home to 146 different bird species and 534 species of butterflies.

LUXEMBOURG

In the year 963, the Carolingian Count Siegfried acquired a small stronghold called "Lucilinburhuc". It was there that the name of Luxembourg first appeared in history. The name would pass to the city which took shape all about, and then be handed on to the country which developed around that city.

In spite of its modest demographic dimensions (approximately 93,000 inhabitants), the city of Luxembourg has become a metropolis, as much in what concerns activities in the service of the international community as in what concerns the composition of its population (over 60 % of its inhabitants are foreigners). Today the city is a microcosm of the Europe of tomorrow.

The old quarters and fortifications of Luxembourg have been declared UNESCO World Heritage Site.

Foto nr.: 14

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe, the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point on the islands. This close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

Faroe Islands sheep

In late April the greatest and most valued sign of spring appears in the Faroe Islands. Everybody is looking forward to the event and we observe the meadows with expectation. And then suddenly it is there – the first lamb. A tiny little lump of wool with large eyes and ears – and like most baby animals, the cutest little thing you'll ever see.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Atlantic bluefin tuna

The Atlantic bluefin tuna is a species of tuna in the *Scombridae* family. It is native to both the western and eastern Atlantic Ocean, as well as the Mediterranean Sea. Atlantic bluefin have become extinct in the Black Sea and is a close relative of the other two bluefin tuna species, the Pacific bluefin tuna and the southern bluefin tuna.

GREENLAND

The musk ox

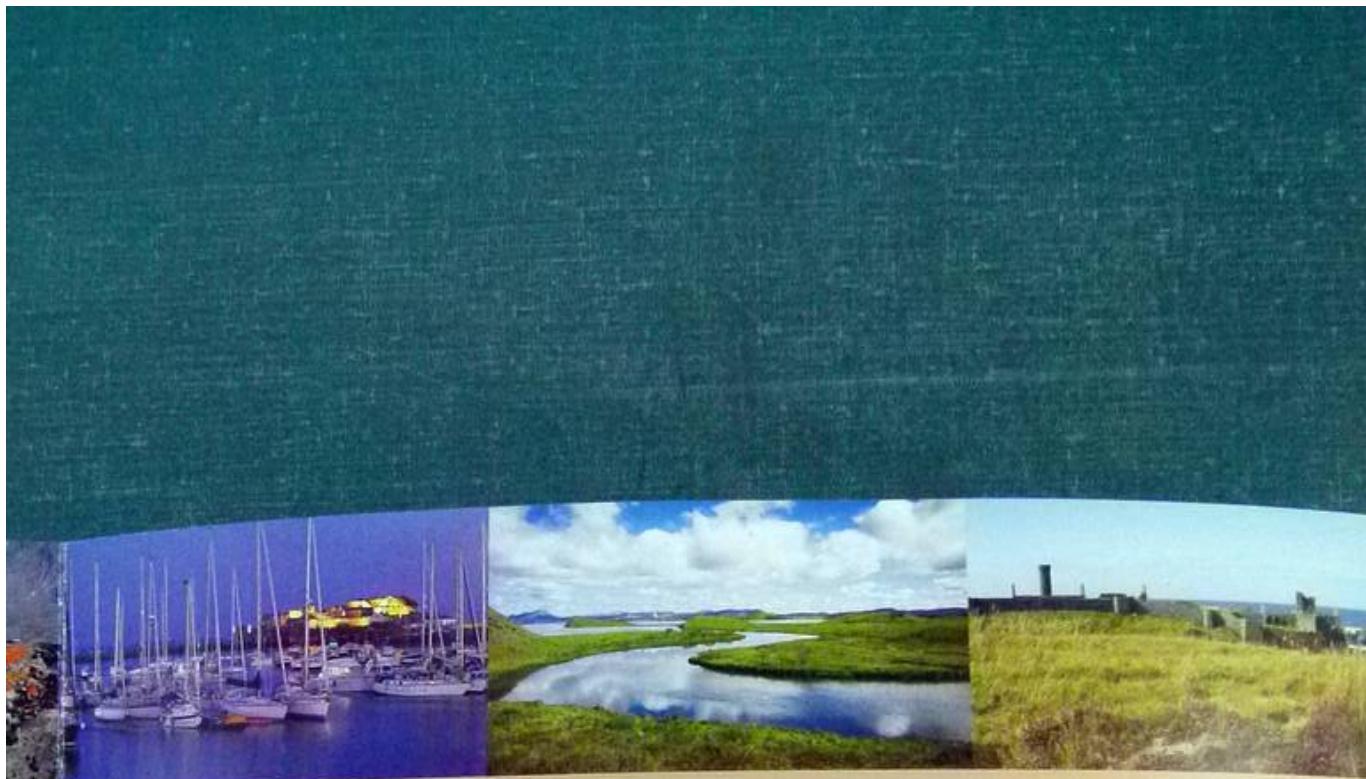

The musk ox is Greenland's largest land ox. It is noted for its thick coat and for the strong odour. Musk ox primarily live in Greenland and Arctic Canada, with small introduced populations in Norway, Sweden, Siberia and Alaska.

In Greenland you can encounter this unique animal! Zackenbergdalen in Greenland's National Park, North East Greenland. This national park is the world's largest with its 972,000 km². In addition, you will find the musk ox further down the east coast around Jan Mayen Land at Ittoqqortoormiit.

On the west coast of Greenland, especially around Kangerlussuaq (Sondre Strømfjord), the musk ox populations are so big that locals and a few foreign trophy hunters are allowed to shoot a number of oxen per year. This hunting is regulated.

Guernsey Goats

The second largest of the Channel Islands, Guernsey is nestled in the bay of St Malo in the English Channel, just 30 miles west of the Normandy coast of France. A dependency of the British Crown, this beautiful island is just 24 square miles. Long and winding cliff paths, perfect vistas of golden sands and sparkling blue seas, rocky coves and bustling harbours make Guernsey an idyllic place to be.

Guernsey Goats

The legendary Guernsey goat has played a major role in Guernsey's farming heritage. With their typically pink noses, docile and friendly temperament they are affectionately known as the Golden Gurnsey. Her rich, yellow coloured milk and butter is prized throughout the world. A ban on importing cattle to the island has been in place since the 19th century in order to protect this much loved breed.

ICELAND

Iceland, "the Land of Fire and Ice", is the home of steaming hot springs, rugged lavafields and majestic glaciers. It has cool summers and long, mild winters. What makes Iceland stand out is its unique natural beauty, spectacular contrasts and absence of pollution. It is also a land of good people and peaceful living. The population of around 320,000 people mainly lives in the coastal areas.

Icelandic goat

The Icelandic goat dates back to the settlement of Iceland over 1100 years ago. It has been on the verge of extinction during the last two centuries. In 2010 the number of settlement goats was 535. Its coat is of high quality cashmere fiber. It is the only farm animal protected by Icelandic regulation to help ensure that it survives.

ISLE OF MAN

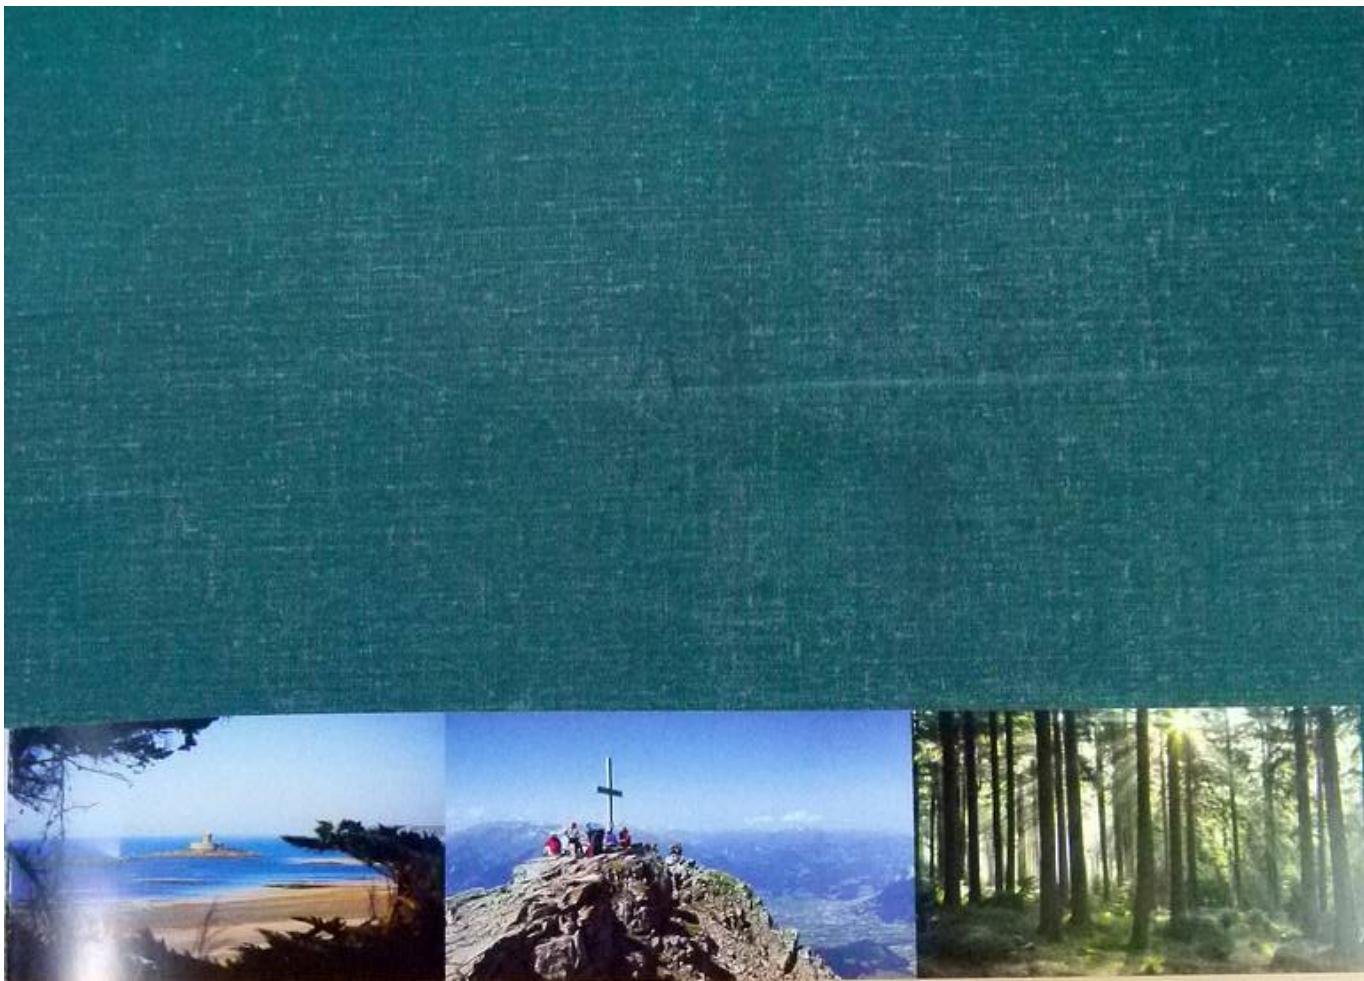

Best known for the TT and Grand Prix motorcycle races beautiful and contrasting Manx scenery has much to offer lovers of the great outdoors and those with a taste for culture. The Island is of compact scale and varied terrain with two mountainous areas divided by a central valley running between the capital, Douglas, and Peel, which houses castle which was built in the 11th century by the Vikings.

Big Cats

Isle of Man resident wildlife artist Jeremy Paul writes: "There are seven subspecies of tiger ranging from the largest – the Siberian tiger to the smallest Sumatran. All are in danger because of habitat loss and the desire for 'tiger parts' in traditional medicine. I saw my first tiger from the back of an elephant in a reserve in India an unforgettable moment and a real privilege. It is sad that they could be extinct in the wild in not too many years."

Foto nr.: 16

JERS

The most westerly of the British Isles lies 22km from Normandy, France. The island's unique heritage reflects a history of Neolithic settlement and continental invasion, yet its constitution has been loyal to the British Crown for over 800 years. Jersey is well known for its mild climate, peaceful leafy lanes and dramatic coastlines, medieval fortresses, secluded bays and golden beaches.

Irish Setter

Many of Jersey's dogs are enrolled in the Kennel Club of Jersey for training in obedience and agility and they are often entered into Shows in the Channel Islands and the UK as fine representatives of a wide variety of breeds. Jersey has many Champion Dogs and this Irish Setter, Jay CH Tiroen Elyformade Pd'H Sh CM is the only Jersey bred dog to receive a Show Certificate of Merit from the Kennel Club in the UK.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

The marmot

The European marmot is at home in the high mountain region and lives in colonies in extended corridor burrows. The marmot is a mammal and belongs to the squirrel family. It is without doubt the best-known creature among Alpine fauna. A notable characteristic is the shrill whistle with which marmots warn one another of approaching predators, the golden eagle for example.

LUXEMBOURG

More than 20% of the surface of Luxembourg is covered by forests and woodland. The northern part of the country is formed by mountains rising up to 600 meters, the rest of the country is made up of undulating country side with broad valleys. Important differences in relief, together with stretches of water interspersed with forests, fields and pastures are the main features that make the landscape so distinctive. Today the Grand-Duchy likes to name itself proudly the "Green heart of Europe".

Wild cat

The population of the wild cat (*Felis silvestris*) in Luxembourg has started to grow again after it has been put under strict protection by the nature conservation act. The European wild cats resemble heavily built tabbies with bushy tails, white chins and throats. They are generally larger than house cats with longer legs and more robust bodies.

Foto nr.: 17

MALTA

The islands of Malta are situated in the Mediterranean Sea, 60 miles south of Sicily. With a history spanning over 7000 years, Malta has been a home, stronghold, trading post and refuge to many civilizations.

The Islands have been described as a melting pot of cultures with many who have left their mark throughout the ages; Malta is now an independent sovereign nation and a member of both the EU and the Commonwealth.

Wild hare

The Wild hare, *Oryctolagus cuniculus*, in Maltese "Fenek il-viagg" is not indigenous to the Maltese islands but it has been in Malta for centuries and is now considered part of the country's fauna. The Wild Hare is still encountered in Malta's countryside particularly the isolated island of Gozo.

MONACO

The Principality of Monaco is the second smallest country, by size, in the world. It is located in Southern Europe on the Northern central coast of the Mediterranean Sea. It is the most cosmopolitan state in the world with 119 nationalities living within its 2 square kilometre territory. Monaco is a constitutional monarchy, headed by H.S.H. Prince Albert II. www.oepm-monaco.mc

Yellow-legged Gull

The stamp depicts the gull, a very common marine bird in Monaco. The species featured on the stamp is the *Larus michahellis*, also called the Yellow-legged Gull. It is characteristic of the Mediterranean Sea. This large gull is omnivorous like most *Larus* gulls.

ÅLAND

The surrounding sea has a great influence on the Åland climate. Spring arrives late and summer is warm and short. The coastal climate also means that autumn and winter tend to be mild. Large parts of Åland are covered with coniferous forest with a relatively high share of broad-leaf trees. The lush forest meadows with a wealth of species, particularly of butterflies, Hymenoptera and beetles, give Åland its special character.

European Peacock butterfly

The stamp depicts the European Peacock butterfly. It belongs to the family Nymphalidae and has a wingspan of 55 to 65 mm. It is no coincidence that the pattern of this butterfly reminds you of staring eyes, a perfect deterrent against predators. Potential predators will find the pattern of the fully extended wings alarming.

Foto nr.: 18

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands.

The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

The Soft Downy Rose, Rosa mollis

The Soft Downy Rose is the only Faroese rose. In 1952 it was found in a few places: Vestmannia, Eidi (Brimnes) and Haldósvík, however, it has become extinct in the wild during the last 50 years. The Faroese Environment Agency took seeds from the shrub found in Haldósvík. Thanks to them, we can still enjoy the sight of the only Faroese rose shrub. Since it does not flower every year, it is a delightful sight to see it bloom.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Iberis gibraltarica

Iberis gibraltarica (Gibraltar candytuft) is a flowering plant of the genus *Iberis* and the family Brassicaceae. It is the symbol of the Upper Rock Nature Reserve in Gibraltar; but is actually a native of North Africa. Gibraltar is the only place in Europe where it is found growing in the wild. The candytuft grows from crevices in the limestone, and is often seen growing in abundance from the north face of the Rock of Gibraltar. Its flowers range from pale violet to almost white, and can reach up to 8 cm (3.1 in) across.

GREENLAND

Greenland is the world's largest island with an area of around 2.2 million sq. km., but only some 410,000 sq. km. are not covered by ice. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in South Greenland, the climate is arctic and the average temperature during the warmest month in the east does not exceed 10°C.

With a population of 56,483 (August 2013 estimate) it is the least densely populated dependency or country in the world.

Rhodiola rosea

Rhodiola rosea, also known as Roseroot, is native to the arctic regions. In Greenland it grows in Southern and Middle Greenland up to the area around Disko Bay on the Western coast and up to the Daneborg area high up on the Eastern coast. It has traditionally been used as a medical plant.

Foto nr.: 19

MALTA

The islands of Malta are situated in the Mediterranean Sea, 60 miles south of Sicily. With a history spanning over 7000 years, Malta has been a home, stronghold, trading post and refuge to many civilizations. The Islands have been described as a melting pot of cultures with many who have left their mark throughout the ages. Malta is now an independent sovereign nation and a member of both the EU and the Commonwealth.

Verbascum sinuatum

English: Wavyleaf Mullein, Wavy-leaved Mullein, Scallop-leaved Mullein; Maltese: Xaxbi l-Andjar. Commonly seen growing on disturbed ground and flowering mainly in late May and early June. Its large leaves, which are carried mainly at ground level, are somewhat greyish and hairy with wavy margins. The bright yellow flowers are carried on tall branched stems up to some 70cm high. Widely distributed in the Mediterranean area.

MONACO

The Principality of Monaco is the second smallest country, by size, in the world. It is located in Southern Europe on the Northern central coast of the Mediterranean Sea. It is the most cosmopolitan state in the world with 119 nationalities living on its 2 square kilometre territory. Monaco is a constitutional monarchy, headed by H.S.H. Prince Albert II. www.oep-monaco.mc

Protea

In honour of H.S.H. Princess Charlene of Monaco, the "Office des Timbres" has chosen to highlight protea, the symbolic flower of South Africa. It is a work of the French watercolour artist, Noëlle Le Guillouzic.

ÅLAND

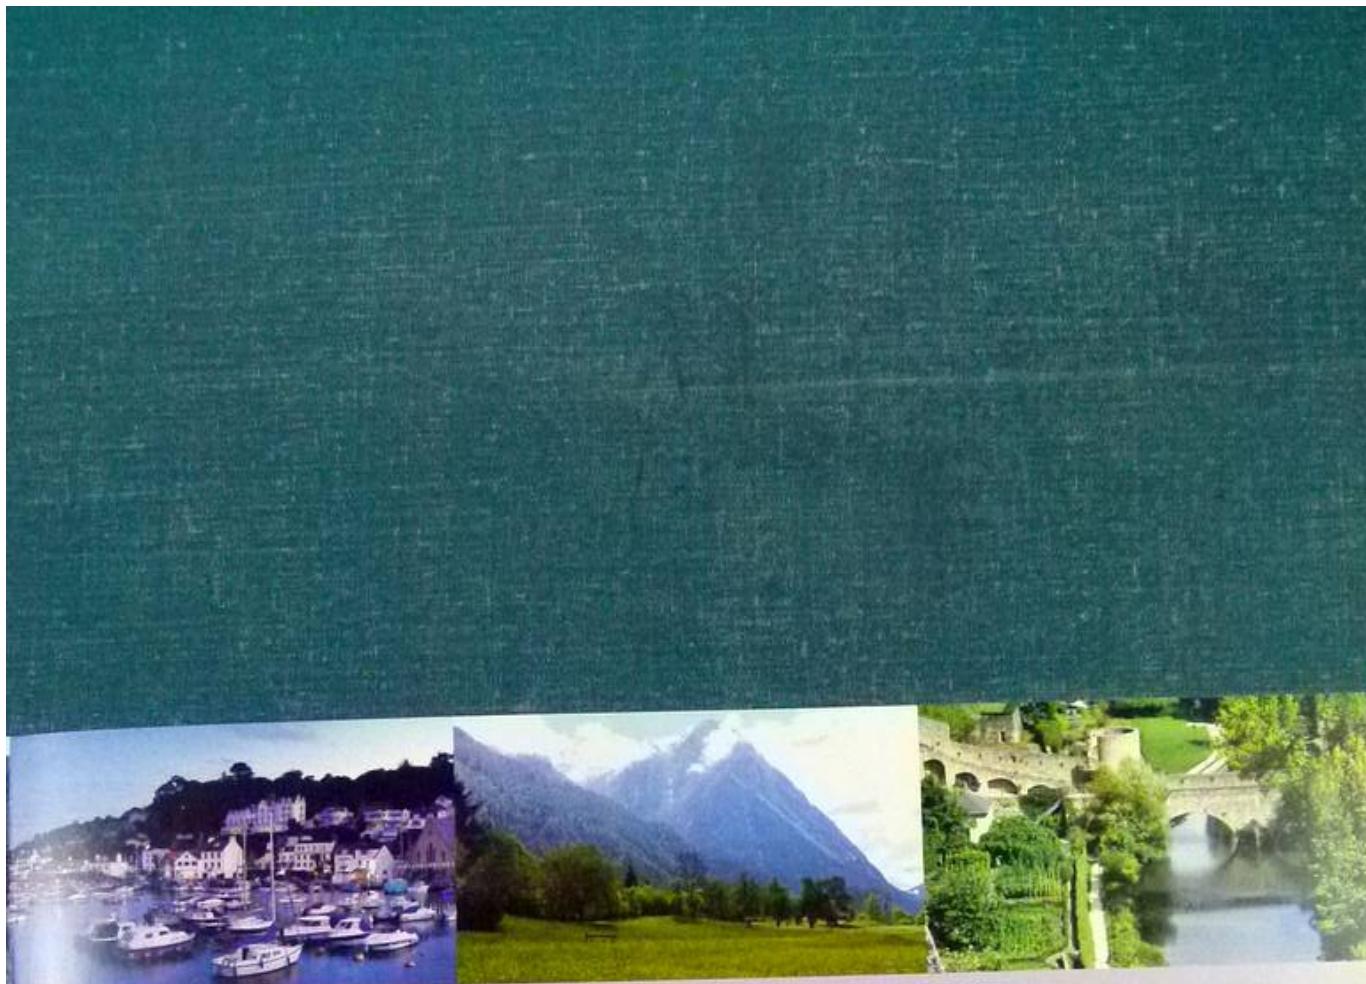

The Åland nature contains many fascinating nature types and the closeness to the sea and the coast is very tangible on the island. The landscape varies between pine forests with many deciduous trees, worked grounds with fields and pastures and forest meadows. The climate is mild due to the surrounding sea and that, in combination with fertile soil, ensures a rich diversity of species in the flora and fauna.

The Nettle-leaved Bellflower

The stamp depicts the nettle-leaved bellflower. The family Campanulaceae comprises some 700 species in 35 genera. In Åland, we find four genera of some 15 species. The nettle-leaved bellflower grows up to one metre tall with pointed petals. It is often found in hazel groves and broad-leaved woodlands where defoliation guarantees fresh, nutritious, decomposing soil every year.

Foto nr.: 20

JERSEY

Said to be the warmest place in the British Isles, Jersey lies less than 30 kilometres from the French coast of Normandy. The island's location allows visitors to benefit from its close proximity to the United Kingdom while enjoying the influence of Continental Europe. With historical landmarks to explore, from dolmens to castles and forts, a bustling town, country parishes and long sandy beaches, it is little wonder that holidaymakers visit the island time and time again.

Hydrangea macrophylla

Hydrangeas can be seen all over Jersey as they were once favoured for parks, gardens and for planting along roadsides. They flourish exceedingly well in Jersey's climate and, for that reason and despite being out of fashion, they tend to be left as they add so much colour to their surroundings. The species growing by the Fisherman's Chapel at St Brelade's Bay in Jersey are commonly known as 'mopheads' and most are blue or pink although some varieties are white.

LIECHTENSTEIN

In terms of area, Liechtenstein – lying between Austria and Switzerland – is the sixth smallest country in the world, with around 37,000 inhabitants. With the formation of the Confederation of the Rhine (Rheinbund) in 1806, the principality became effectively independent. Today, Liechtenstein's economy is well diversified and benefits from the currency and customs treaty with Switzerland. The official language is German, although an Alemannic dialect is spoken colloquially.

The Siberian iris

Although the appearance of the Siberian iris is very much in decline, it is still to be found in Liechtenstein's marshy meadows and lowland moors. In large parts of the Ruggeller Riet this light-loving plant, which is also known as the "Blauer Ilze" (*iris pseudacorus*), dominates the landscape with its large violet-blue flowers in the months of May and June.

LUXEMBOURG

With 1,300 identified species of vascular plants in the country, Luxembourg is, despite its small size, the keeper of an astonishing biodiversity. In accordance with the UN Convention on Biological Diversity, its goal is to stop the loss of endangered species. Hopefully many ancient and traditional vegetable varieties will be saved in the gardens, thus contributing to the maintenance of these natural treasures.

Tragopogon porrifolius

Cultivated for its ornamental flower, edible root, and herb properties, it also grows wild in many places and is one of the most widely known species of the salsify genus, *Tragopogon*. The root and sometimes the young shoots of *T. porrifolius* are used as vegetables, and historically the plant was cultivated for that purpose. The plant has also been used in herbalism, also since classical times (mentioned by Dioscorides), and is claimed to have beneficial effects on the liver and gall bladder. The root is regarded as a diuretic.

Foto nr.: 21

GUERNSEY

Second largest of the Channel Islands, Guernsey is situated in the bay of St Malo in the English Channel, just 30 miles west of the Normandy coast of France. Improvements in transport links to and from the islands heralded the start of the export industry with the first commercial crops of onions and grapes, exported in the mid-1800s. There is still a vibrant export market in the flower industry, including via Guernsey lily and award-winning clematis.

Guernsey in Bloom

Guernsey has enjoyed huge success at Britain in Bloom awards, which celebrate their 50th anniversary in 2014. Featured on our stamp is St Pierre Port, a beautiful country parish whose national Gold medal-winning team demonstrated skills in restoration, community work on church land and the use of the regeneration of plant material.

ICELAND

Iceland, "the Land of Fire and Ice", is the home of steaming hot springs, rugged lavafields and majestic glaciers. It has cool summers and long, mild winters. What makes Iceland stand out as a venue is its unique natural beauty, spectacular contrasts and absence of pollution. It is also a land of good people and peaceful living. The population of around 320,000 people mainly lives in the coastal areas.

Iceland flora

One of the main characteristics of the flora of Iceland is the small number of species of vascular plants. The last Ice Age erased all or most of Iceland's vegetation. There are a total of around 400 native and naturalized species in Iceland. A number of species were deliberately introduced and cultivated for agricultural and soil conservation purposes.

ISLE OF MAN

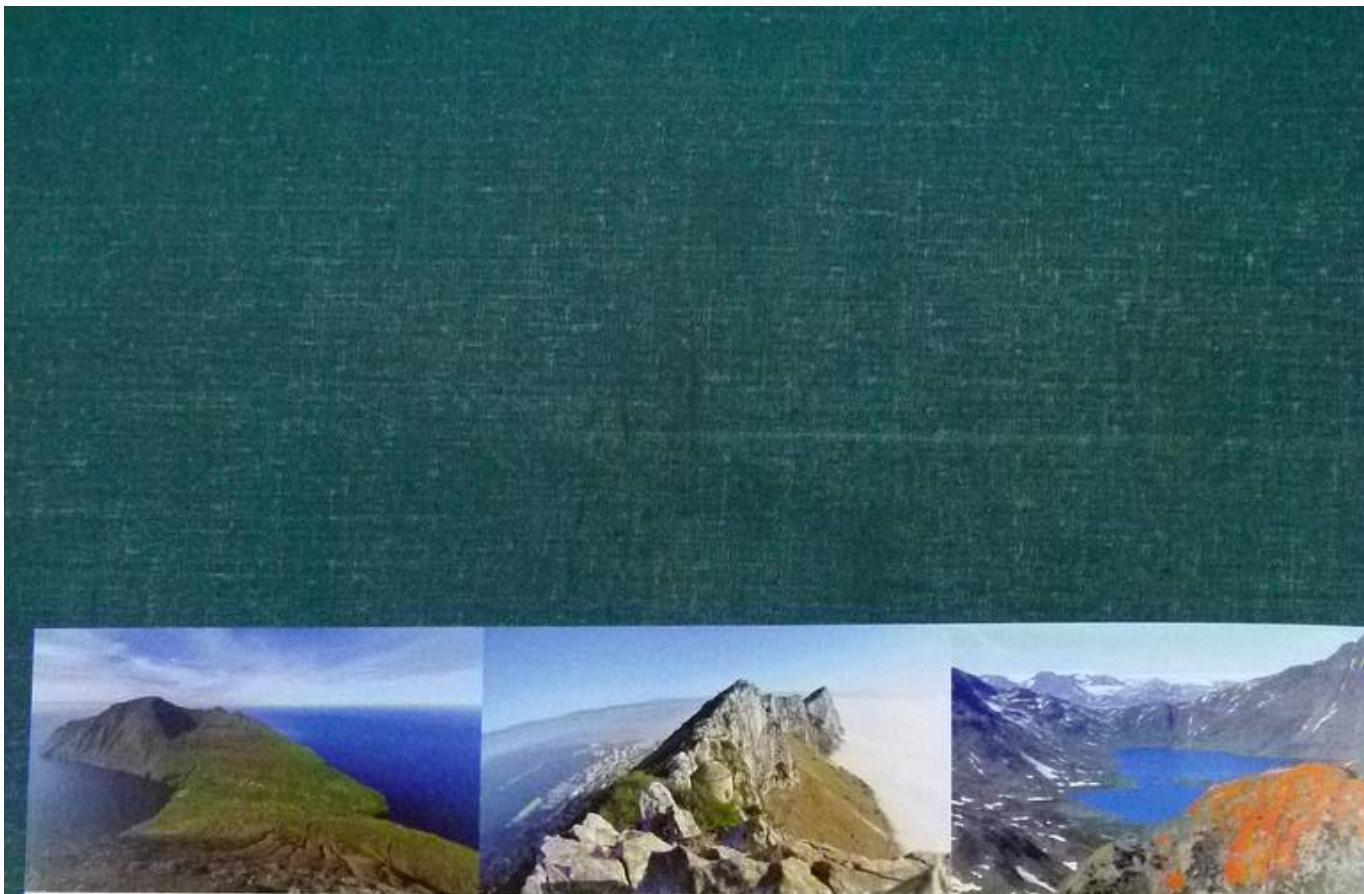

Ours is an Island of contrasts. Our flourishing and progressive international business sector is becoming a world centre for the space industry while our Victorian industrial heritage is represented by the famous Laxey Wheel. Built in 1854 to pump water from the nearby mine, and set within a beautiful pastoral valley, it is the world's largest working water wheel.

Flora

Manx artist Catherine James's colourful SEPAC Flora stamp celebrates the hellebore which offers a burst of colour during the colder months of the year. This beautiful stamp was originally part of our Winter Flora miniature sheet issued in January of this year.

Foto nr.: 22

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands. The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

Knitting

It is known that Faroese wool has been a vital product for the Faroese since the Viking Age. For many years handicrafts such as knitting were held in some disdain while design was considered a far superior form of art. But actually these two are inseparable; you cannot have one without the other. There is now a rapid and growing appreciation of handicrafts which is a delightful turn of events.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Moorish Castle

The Moorish Castle is the name given to a medieval fortification in Gibraltar comprising various buildings, gates, and fortified walls, with the dominant features being the Tower of Homage and the Gate House. Part of the castle itself also housed the prison of Gibraltar until it was relocated in 2010. The Tower of Homage is clearly visible to all visitors to Gibraltar due to its dominant and strategic position.

GREENLAND

Greenland is the world's largest island with an area of around 2.2 million sq. km, but only some 410,000 sq. km are not covered by ice. The Greenland ice sheet is the largest in the world.

With a population of 56,901 (March 2015 estimate) it is the least densely populated dependency or country in the world.

Nuuk Gaypride

The first Nuuk Gaypride was held in May 2010. It has developed into an annual event in Nuuk, capital of Greenland. Lesbian, gay, bisexual, transgender (LGBT) rights in Greenland are very similar to those in Denmark. Same-sex sexual activity is legal, with an equal age of consent, and there are broad anti-discrimination laws. Furthermore same-sex couples have access to registered partnerships which provide them with nearly all of the rights provided to married opposite-sex couples.

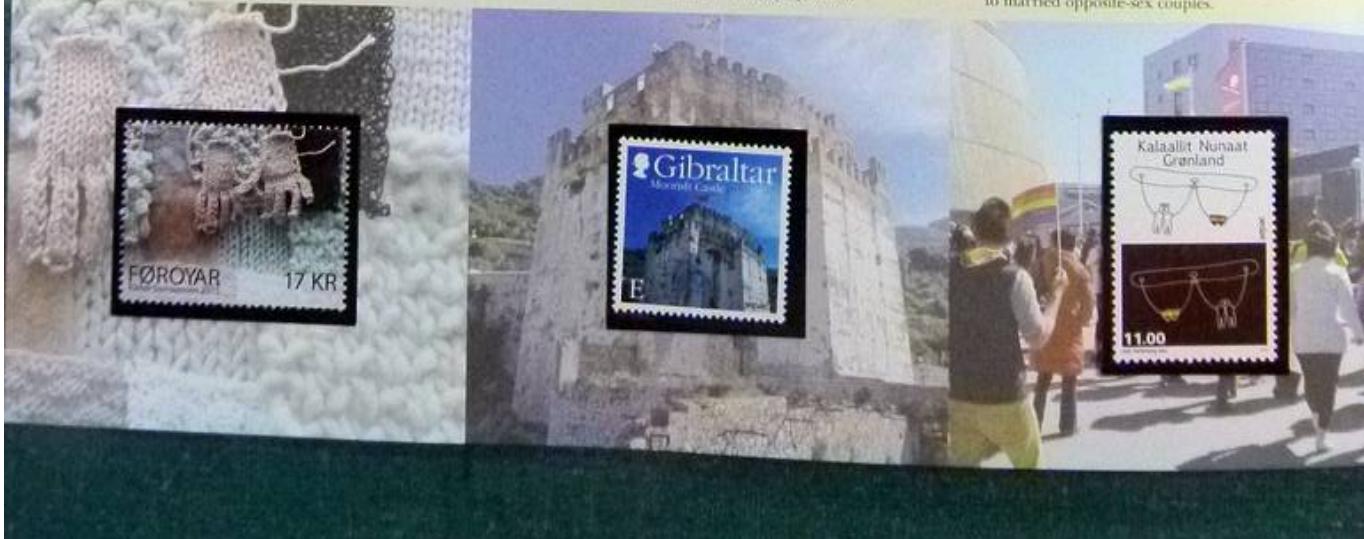

Foto nr.: 23

Malta

islands of Malta are situated in the Mediterranean Sea, 60 km off the coast of Sicily. With a history spanning over 7000 years, it has been a home, stronghold, trading post and refuge for various civilisations. The islands have been described as a pot of cultures with many who have left their mark over the ages. Malta is now an independent sovereign state and a member of both the EU and the Commonwealth.

The country's culture has been influenced by many different societies which include the Order of St John, the British and the French. As a result, the Islands host numerous annual feasts, special occasions and events. Amongst these festivals lies 'The Regatta' on 1 March and 8 September in the Grand Harbour to celebrate Malta's victory during the Great Siege of 1565 and the end of World War II.

MONACO

The Principality of Monaco is the second smallest country, by size, in the world. It is located in Southern Europe on the Northern central coast of the Mediterranean Sea. It is the most cosmopolitan state in the world with 119 nationalities living on its 2 square kilometre territory. Monaco is a constitutional monarchy, headed by H.S.H. Prince Albert II.

The Monte-Carlo Opera

The Princes of Monaco have supported the arts since the 18th century, thus giving the Principality a greater cultural influence in comparison to its small territory. A symbol of this success is the Monte-Carlo Opera, built in 1879 by Charles Garnier, which hosted famous performances of Diaghilev's Ballets Russes. The Government focuses on developing a cultural programme of high quality. The Principality reinforces its status as a cultural dominion by actively participating in many international cultural organisations such as UNESCO.

Åland

Åland has a rich and diverse cultural life. The music scene is lively with all types of concerts from organ festivals to rock festivals. Theatre productions range from historical plays to variety shows. Museums are plentiful from small farm museums in the countryside to the world famous Åland Maritime Museum. The archipelago has also been a source of inspiration for many writers and painters and Åland has several art galleries and active artists and artisans.

Midvinterblot

The stamp depicts the Swedish artist Carl Larsson's debated work of art Blöt from 1918. The original 90 m² painting is displayed at the Swedish National Museum of Fine Arts in Stockholm. Appearing on the stamp is a smaller signed version, which is today part of the private art collection of the Åland businessman Anders Wiklöf.

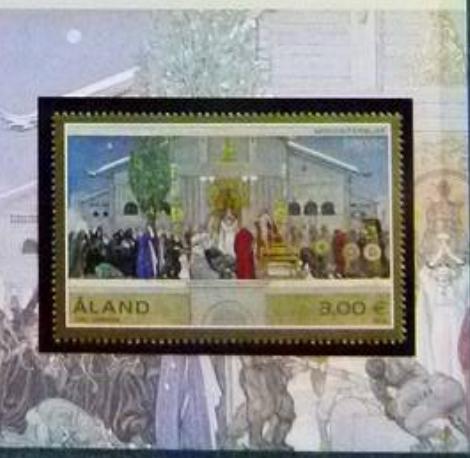

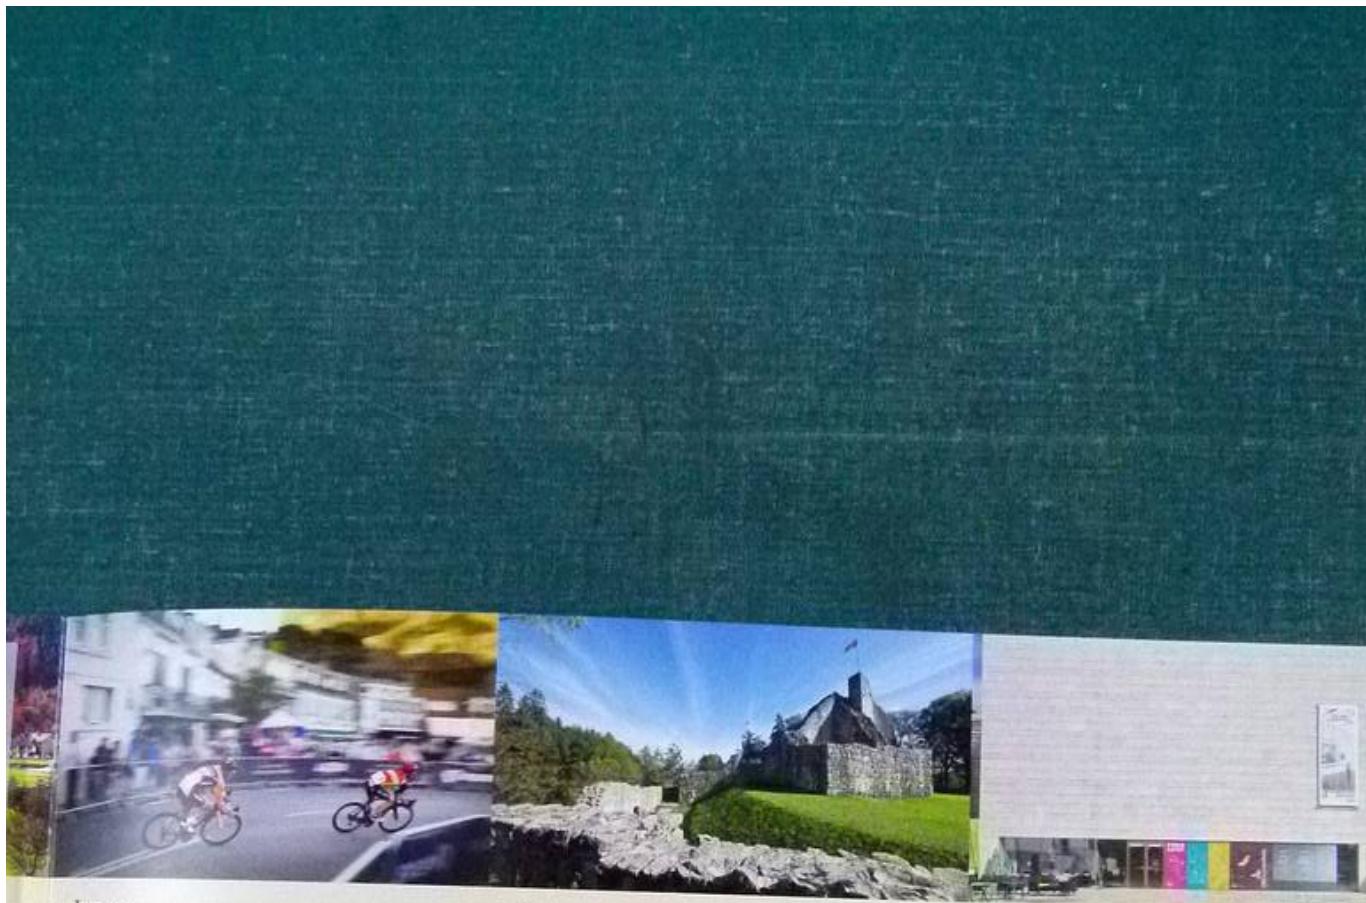

Foto nr.: 24

JERSEY

Despite being just 9 miles long and 5 miles wide, the dynamic landscape of Jersey creates the perfect place for a huge variety of sports which are deep-rooted in island life. The jagged northern cliffs and pretty fishing harbours are perfect for those who enjoy rock climbing, diving and kayaking, whilst the flat southern bays are a haven for jet skiers, wake boarders and sailors. Miles of winding, green lanes offer unspoilt beauty to cyclists, walkers and horseback riders and the island continues to attract thousands of visitors year after year.

Outdoor pursuits

Having one of the largest tidal ranges in the world and boasting abundant offshore reefs and miles of magnificent coastline means that sailing in Jersey is extremely popular with islanders. Home to some of the largest yacht clubs in British waters, the southern, picturesque and historical bay of St Aubin is the base for competitive racing and numerous sporting companies.

LIECHTENSTEIN

The territory of Liechtenstein was conquered by the Romans in 15 B.C. who, in the years afterwards, built a Roman road for the important route running between Milan and Bregenz. Today's Principality of Liechtenstein was established in 1719 through the unification of the county of Vaduz and the domain of Schellenberg which Prince Hans Adam von Liechtenstein had purchased from the Counts of Hohenems several years previously.

Cameo

The cameo made of green glass dates back to the 1st century and was found in 1992 during archaeological excavations in Vaduz. It shows the bust of goddess Minerva wearing a Corinthian helmet. Minerva was the Roman goddess of wisdom, tactical warfare, arts and shipbuilding as well as the guardian of knowledge. She was worshipped as a supreme deity in Rome in addition to Jupiter and Juno.

LUXEMBOURG

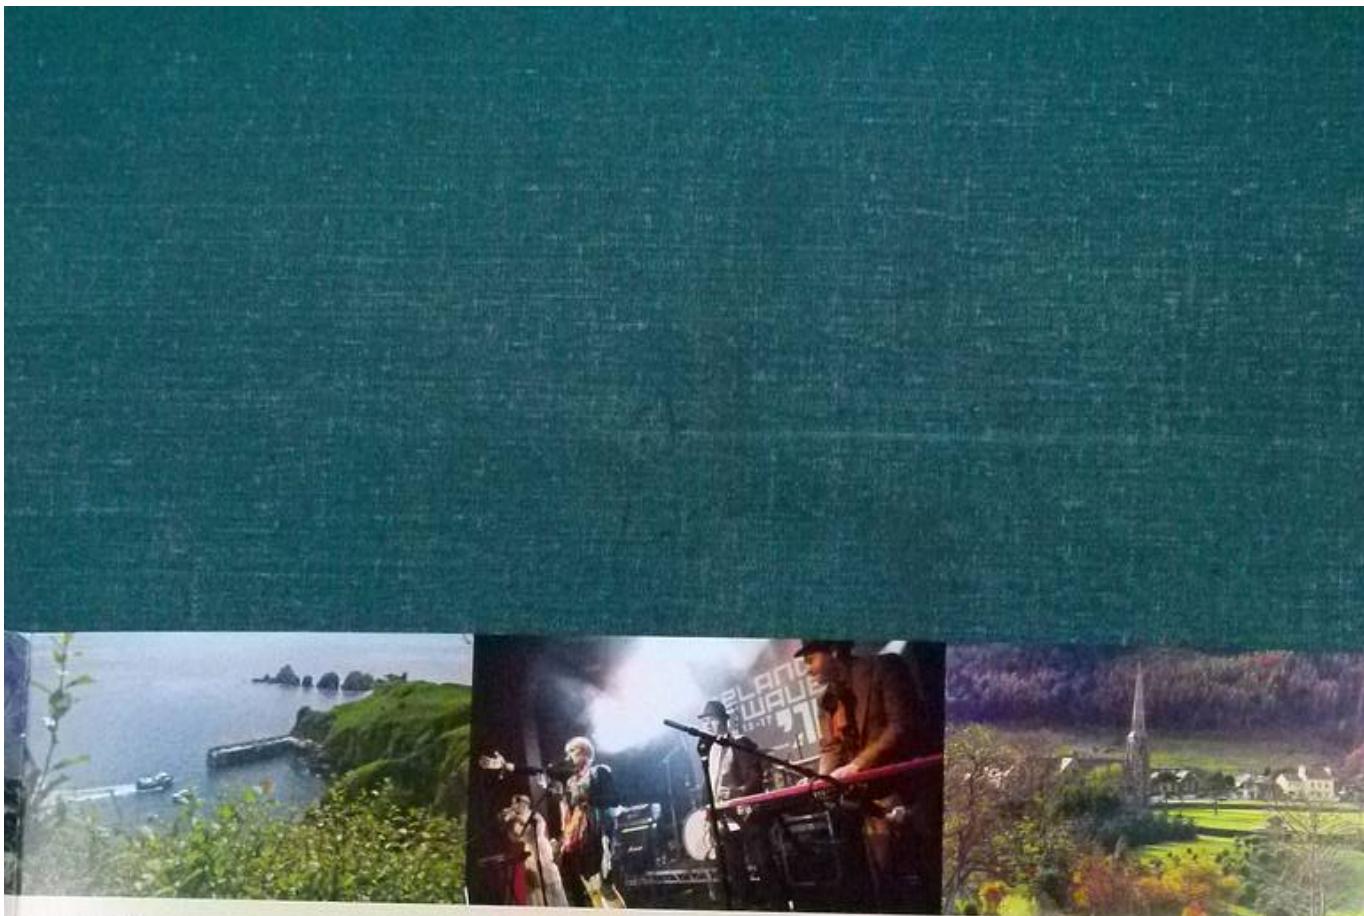

As reflected in its diverse and multicultural population, the culture of Luxembourg is characterised by its openness to the world, its multi-lingualism in every field, its festivals and traditions. With its numerous medieval castles and contemporary architecture, Luxembourg is home to a multitude of fascinating cultural sites.

The National Museum of History and Art

The National Museum of History and Art, located in the historic quarter of Luxembourg's old town, was renovated, extended and reorganised. The new rooms are dedicated to sections about prehistory, protohistory and the Gallo-Roman era. The medieval, numismatic, weapons and fortress, arts sections are located in the original and restructured parts of the Museum. The beautiful refurbished houses, dating from the 17th and 18th centuries on rue Wiltheim, house the decorative and fine art collections as well as the collection on popular tradi-

Foto nr.: 25

GUERNSEY

The Bailiwick of Guernsey comprises the three separate jurisdictions of Guernsey, Alderney and Sark. Guernsey lies less than thirty miles from the French coast and seventy miles from the south coast of England. The stunning coastline comprises flat sandy beaches, secret coves and rugged harbours; and thanks to its temperate climate the island is host to a range of flora and fauna rarely found elsewhere in the British Isles.

Artists of Guernsey

Originally from Sheffield William Toplis was a young, but established artist when he first holidayed on Sark in 1883. He went on to spend 60 years on the tiny Channel Island and his paintings reflect the natural beauty of its stunning coastal scenery.

Our 62p stamp shows his wonderful representation of La Sanguine in the North West of the island.

ICELAND

"The Land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and vast glaciers. It has cool summers and long, mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and recent literature, its music and award-winning films. The population of around 325,000 lives mainly in the coastal areas.

Iceland Airwaves

Music is the theme of the Icelandic SEPAC issue which features Iceland Airwaves, the country's biggest music festival. The object of this annual celebration is to introduce Icelandic music to foreigners. For five autumnal days, artists are invited to perform in a variety of venues, enjoying musical creativity. More than 200 bands attended the Airwaves celebrations in 2014.

ISLE OF MAN

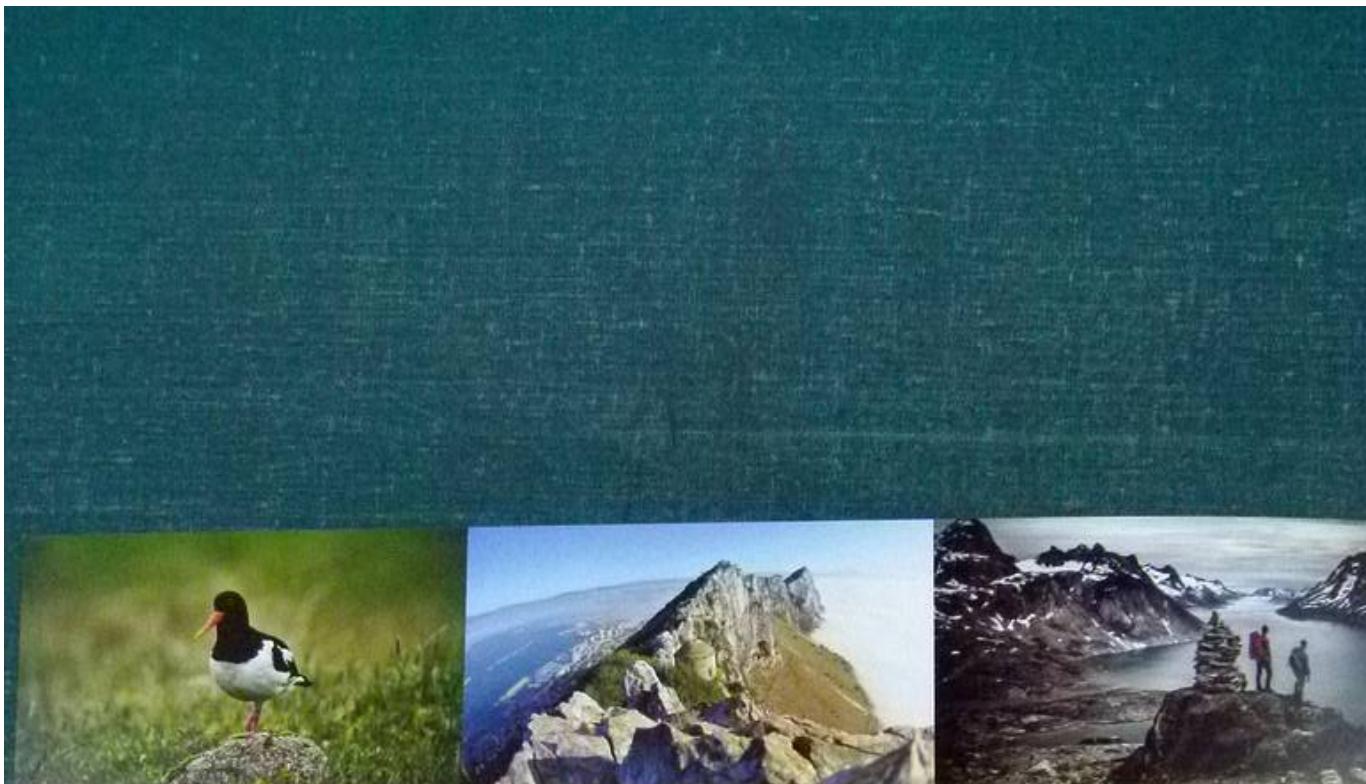

At the centre of the Isle of Man, in the picturesque village of St John's, sits the Tynwald green; our Parliament field is sheltered by tree-covered hills and the Tynwald National Park and National Arboretum which was founded in 1979 like the tapestry, to celebrate the Millennium of Tynwald (our most ancient form of government introduced by Vikings). Covering 25 acres the Park is home to a wide range of ornamental shrubs and trees and a number of breed ducks.

Tynwald Hill

Our 2015 SEPAC stamp is part of The Millennium Tynwald Tapestry stamp issue derived from a large work made by the Isle of Man Federation of Women's Institute 1979. The view depicted is that of the ceremonial path which links the church to the Tynwald Hill where the Island's laws are promulgated each year in July.

Foto nr.: 26

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands. The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

National Bird – The Oystercatcher

Saint Gregory's Day on the 12th of March is celebrated for the arrival of the oystercatcher and the oncoming spring. In September the oystercatchers start to congregate in large flocks on the beach – just before starting the long journey back to the British Isles and the French Atlantic coast. This is the melancholic season, the beginning of winter, when people see the last oystercatchers migrate southeast.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Alameda Gardens Bridge

The old bridge over The Dell affords the prettiest vistas in the Alameda Gardens. The stunning Bougainvillea that grows over it is over a hundred years old. Parts of the Alameda Gardens and other gardens in and around Gibraltar were designed by Italian landscape gardener Giuseppe Codali, who is commemorated by a bust that lies at the entrance to the bridge.

GREENLAND

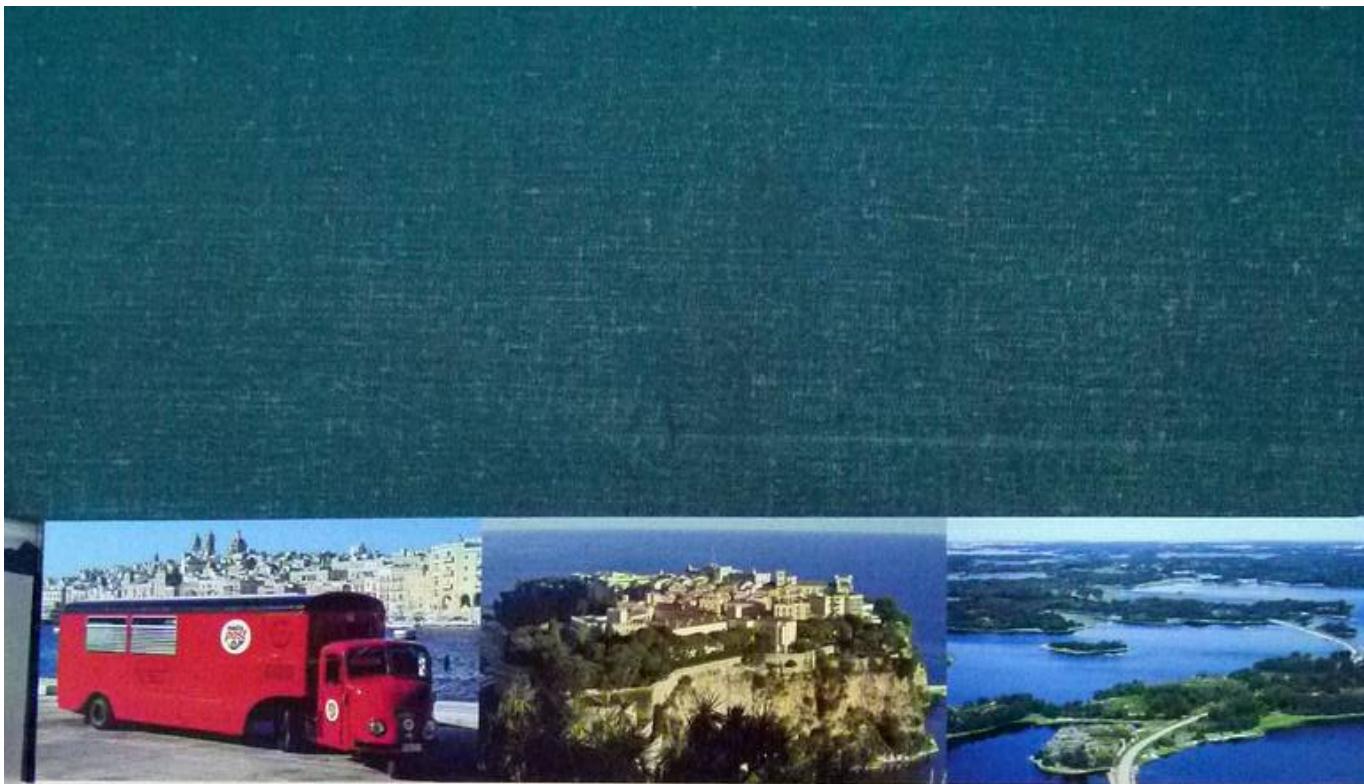

Greenland is the world's largest island with an area around 2.2 million sq. km, but only some 410,000 sq. km are not covered by ice. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in South Greenland, the climate is arctic and average temperature during the warmest month of the year does not exceed 10°C. With a population of 55,984 (Janus 2015 estimate) it is the least densely populated dependent country in the world.

Seasons in Greenland

Seasons in Greenland are very diverse. Each season has distinctive marks. But what really differentiates the seasons is presence or absence of snow. Some activities and experiences are seasonal, e.g. dogsledding and witnessing the northern lights which primarily take place during winter; whereas north lights and whales can be seen during summer.

Foto nr.: 27

MALTA

The country's landscape has been influenced by many civilisations and societies which include the Order of St John, the Arabs, the British and the French. As a result, Malta is endowed by beautiful historical buildings which are found at every corner of the islands. Amongst these building lies the Verdala Palace found in Buskett Gardens, limits of Siggiewi Malta. This architectural heritage is illustrated on MaltaPost's SEPAc stamp issue entitled 'Seasons'.

Verdala Palace, Buskett Gardens, Malta

MaltaPost's SEPAc stamp illustrates 'Autumn' and features the Verdala Palace. This Palace is found in Buskett Gardens, limits of Siggiewi Malta and was built in 1586 during the reign of Grandmaster Hugues Loubenx de Verdalle. Today Palazzo Verdala serves as the official summer residence of the President of Malta.

MONACO

The Principality of Monaco is the second smallest country by size, in the world. It is located in Southern Europe on the Northern central coast of the Mediterranean Sea. It is the most cosmopolitan state in the world with 119 nationalities living on its 2 square kilometres territory. Monaco is a constitutional monarchy, headed by H.S.H. Prince Albert II. www.oepm-monaco.mc

Seasons

Monaco benefits from a particularly temperate climate. All seasons are enjoyable. The stamp allows for a poetic view on the different seasons in Monaco.

ÅLAND

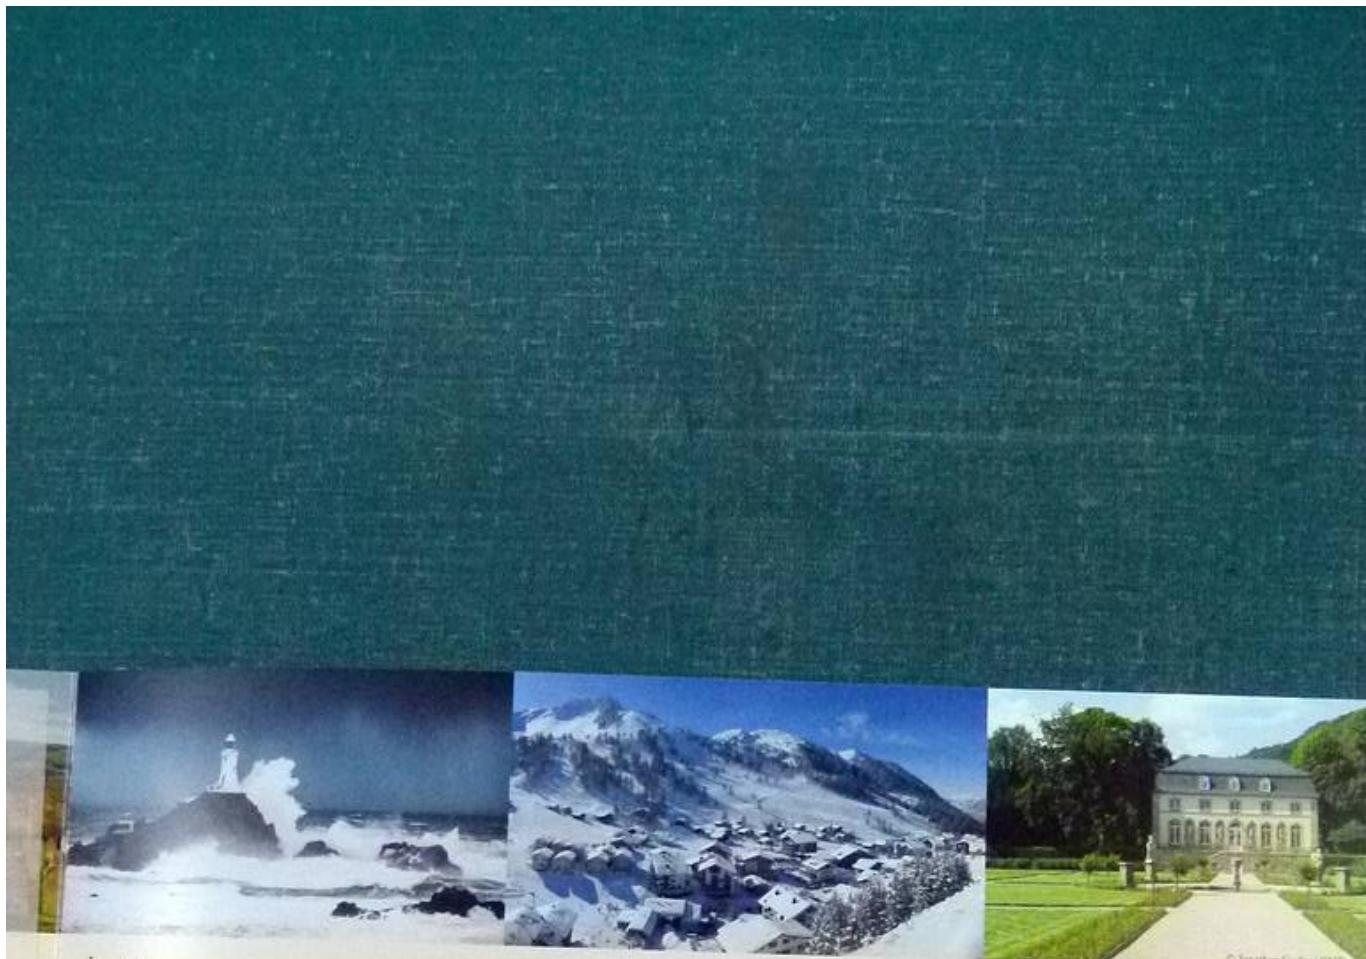

Because of its location in the waters between Sweden and Finland, the Åland Islands have milder climate than comparable places this far north. This means that summers are a little cooler compared to mainland Finland or Sweden but winters are relatively mild. Summer is from June to August and the Åland Islands have more sunshine hours than anywhere else in Scandinavia. Winter is from December to March. On average, February is the coldest month.

Seasons

The stamp depicts the Åland seasons from the perspective of an apple. Graphic designer Annika Zetterqvist's idea for motif may be summarised by the words "germinate, blossom, ripen and enjoy", symbolising the seasons of both nature and life. In recent years, apples as a garden produce have significantly increased its share of the total Åland farm produce.

Foto nr.: 28

© Jonathan Godin / ONT

JERSEY

Islanders and visitors continue to enjoy Jersey's great outdoors during the winter months which are the mildest in the British Isles. Snow settles on the island only occasionally and the beautiful countryside, coastal paths and villages are transformed into a winter wonderland. Being an island which boasts a varied coastline of cliffs, rocky bays and long sandy beaches, high winds and high tides also produce dramatic scenes that are observed and photographed as much as they are on a tranquil summer's day.

La Tour de Vinde

The lighthouse known as La Tour de Vinde, at the foot of the cliff at Noirmont Point, is a Martello tower that was erected between 1808 and 1810 to assist ships approaching St Aubin's Bay on the south coast of Jersey. It has housed a light since 1915 and is painted black and white as a daymark for sailors and is a popular site for visitors throughout the year.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in the area and the only one to lie entirely in the Alps.

Four Seasons

Liechtenstein's "Four Seasons" SEPAC stamp is divided into equally large areas depicting winter, spring, summer and autumn in a clockwise direction. At the same time, a palette with coloured fields symbolises the time of the year. In addition, the theme of the SEPAC stamp was printed on a 10-stamp sheetlet in silver with a partial UV coating in each language of the member states.

LUXEMBOURG

The Grand Duchy has no clear-cut climate: it is influenced by the oceanic climate of the Atlantic region (slight differences, with mild, wet winters) and the continental climate of the plains of Eastern Europe (substantial differences, harsh winters and wet summers).

Springtime in the Eislek

The ocean influence brings rain throughout the year, while the continental influence brings biting, dry weather in winter. The climate is temperate from May to mid-October. August are the hottest months, especially in the Mosel Crops, especially wine grapes, thrive here. In the sparsely populated countryside is a riot of wildflowers and blossoms. The Duchy often experiences its own version of an Indian summer in September and October. There are slight variations in temperature, of rarely more than 2°C, between the north and south of the country, due to the difference in altitude.

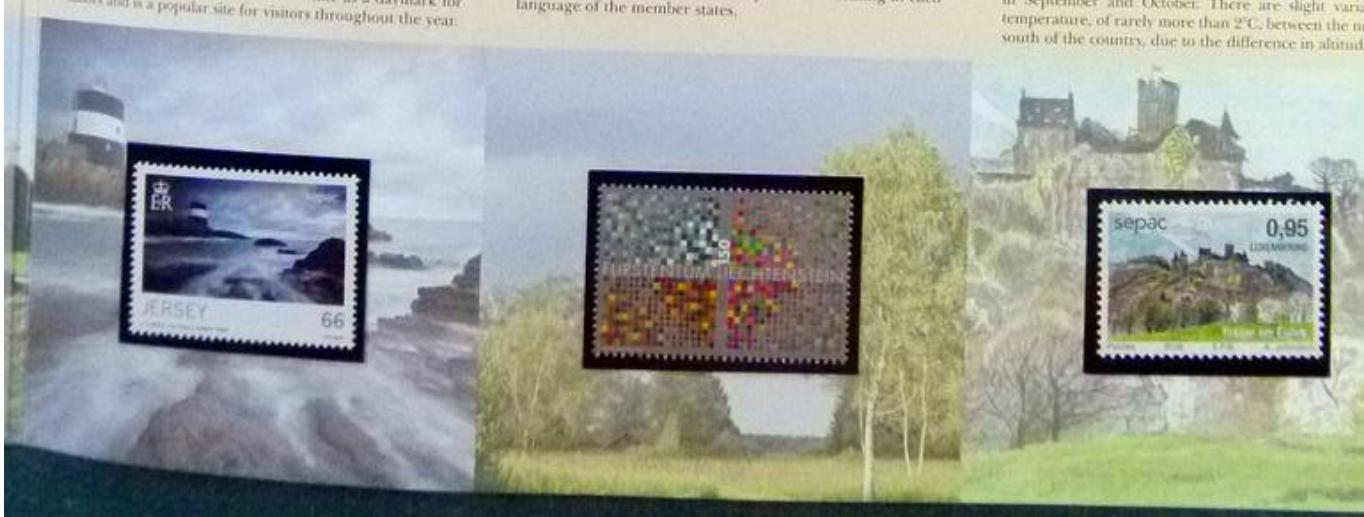

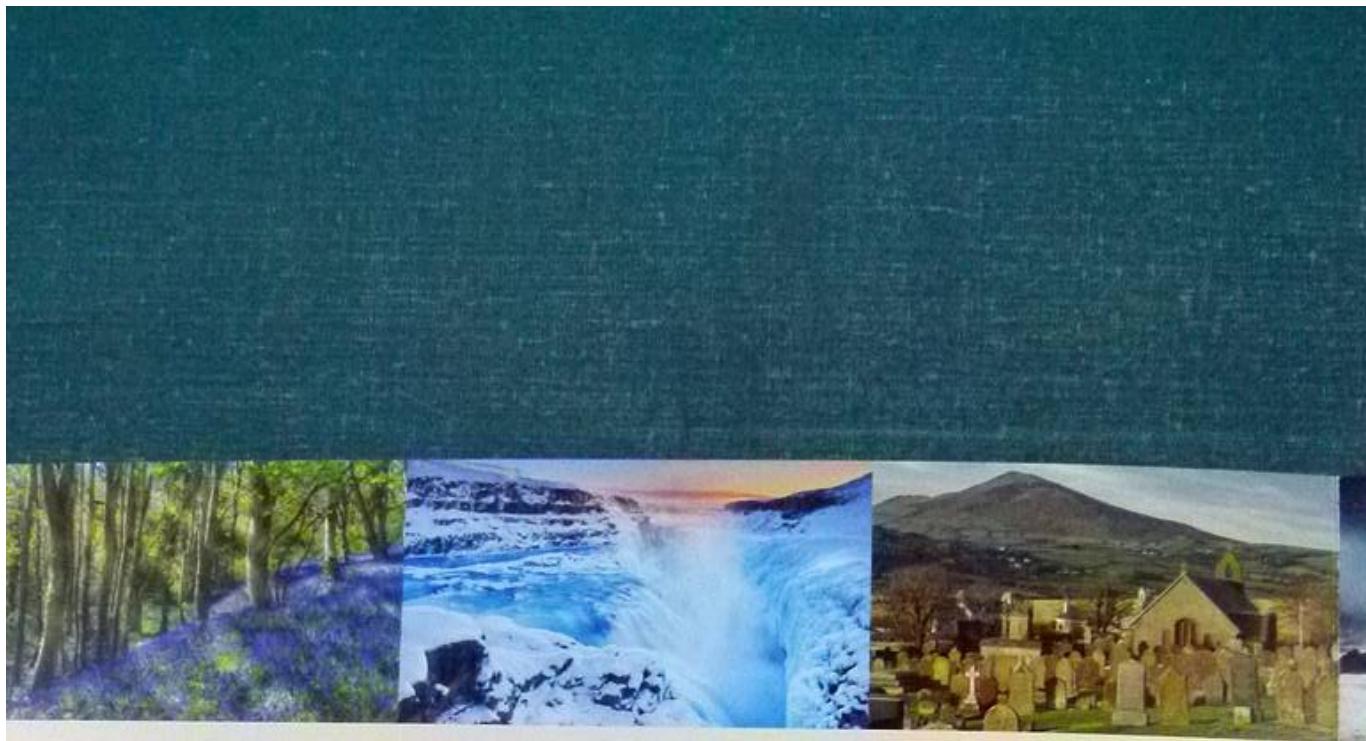

Foto nr.: 29

JERSEY

Holiday of Guernsey comprises the three separate islands of Guernsey, Alderney and Sark. It lies less than thirty miles from the French coast seventy miles from the south coast of England. The coastline comprises flat sandy beaches, secret coves, rugged harbours, and thanks to its temperate climate is host to a range of flora and fauna rarely found here in the British Isles.

Guernsey

In Guernsey there can be no more spectacular display of colours than in the island's Saumarez Park. The largest on the island, the park houses a range of gardens, including a bamboo walk, a Japanese garden, camellia lawn along with a picturesque rose garden walled garden. Our autumn stamp captures a majestic Ash 'Jaspidea' tree in glowing autumnal colour.

ICELAND

"The Land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and mighty glaciers. It has cool summers and long rather mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and more recent literature, its music and films. The population of around 332,000 lives mainly in the coastal areas.

The Seasons

Seasonal differences are pronounced in Iceland and changes in climate and nature are impressive. In spring the sun rises earlier and sets later. The colours of nature are fair and varied in autumn. Migrating birds practice aerobatics before flying off to warmer latitudes. Winter arrives with storms and snow and northern lights swaying across the sky on clear winter nights.

ISLE OF MAN

The Isle of Man has many interesting churches and chapels located in some beautiful town and rural locations. To the visitor they are peaceful retreats from the busy world but to residents they are often the active centre of their community. The Island's early ecclesiastical history is something of a mystery, and although historians think that parishes were organised at an earlier date, the establishment of such a system by our Scandinavian ancestors was set up later in the twelfth century, evidence of the Island's rich heritage.

St Patrick's Church Jurby

Situated prominently on the coast it is closely associated with the nearby Royal Air Force aerodrome (built for training purposes during World War II) and a number of military personnel are buried here. Home to a pre-Reformation font of red sandstone and a silver chalice (a rarity now in the Manx Museum) there are a number of ancient crosses to be found on this site.

Foto nr.: 30

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands.

The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

The Faroese Knife

The knife has always been the most important tool of the Faroese. This is signified by the old saying: "A knifeless man is a lifeless man" which indicates the need in everyday life to have a knife handy at all times. The knife was used in almost all activities undertaken in the old farmer-hunter society, by men, women and children. The knife was the Faroese universal tool.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Military Heritage - War Memorial

The Gibraltar War Memorial, also referred to as the British War Memorial, is located to the west of Line Wall Road in Gibraltar, the British Overseas Territory at the southern end of the Iberian Peninsula. The monument, which commemorates the fallen of the First World War, was sculpted by Jose Piquet Catoli of Barcelona, Spain and was constructed of Carrara marble.

GREENLAND

Greenland is the world's largest island with a total area of 2.2 million sq. km. Only some 410,000 sq. km are not covered by ice. The Greenland ice sheet is the second largest in the world, the exception of a few sheltered valleys in South. Greenland's climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 56,225 (January 2017 estimate) it is the least densely populated dependency or country in the world.

Local handicraft in Greenland

Greenland's population depends heavily on marine resources including sealing. In Greenland, sealing means much more than food on the table and housekeeping money. In fact, there is a long and proud Greenlandic tradition of using the entire seal that has been caught. It is a rich cultural heritage, which can be combined with aesthetically beautiful sealskin articles.

Foto nr.: 31

MONACO

Located in Southern Europe on the Northern central coast of the Mediterranean Sea, the Principality of Monaco is a constitutional monarchy headed by H.S.H. Prince Albert II. It is the second smallest country by size, in the world. The Principality offers a cosmopolitan international lifestyle. A gateway to Europe, residents of 139 different nationalities have decided to make Monaco their home. www.oecp-monaco.mc

Pottery

Always mindful of its artistic development, Monaco opened its own ceramics workshop in 1874. The first monégasque pottery produced abundantly and diversly. After its closing in 1884, Prince Louis I inaugurated the second pottery in 1907, which ceased its activities in 1914. A number of workshops produce ceramics to this day, carrying on the tradition of artistic pottery in Monaco.

MALTA

The Maltese Archipelago has been ruled by a succession of powers who left their mark on Maltese history including its traditional handicraft. Craft forms, such as weaving and pottery date back to prehistoric times. Cotton was introduced in around 870 A.D. whereas lace making became highly popular during the 16th century. A popular craft, which was and is still used to support Malta's fishing industry are the Bamboo Fish traps.

Traditional Handcrafts

MaltaPost's SEPAC stamp illustrates Maltese traditional handcraft and features 'Bamboo Fishing Traps'. These traps were traditionally made with a fine reed-like material, but these days are made out of nylon, which is virtually indestructible.

ÅLAND

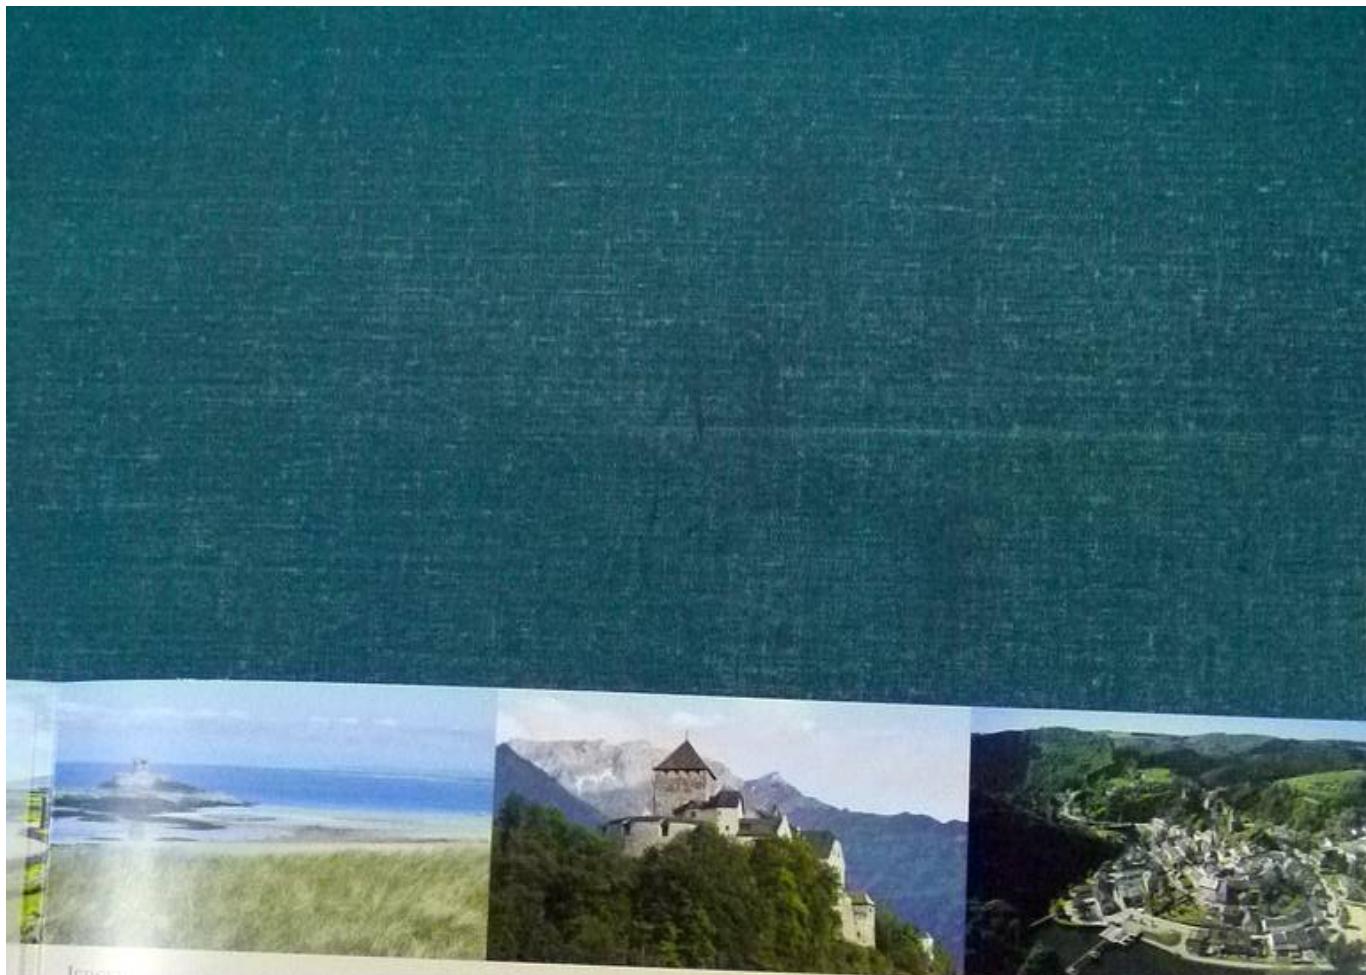

The arts and crafts tradition is very much alive in Åland. Local artisans combine old handicraft traditions and modern creativity. Characteristic is the connection to the Åland archipelago through choice of material, form and function. The level of craftsmanship is high with a great variety of productions from brightly coloured woven rugs and silk-screened textiles to delicate silver jewellery and trivets made from thick, knotted rope. The handicrafts are found in the shops of Mariehann or at the artisans' studios and shops.

Local crafts

The stamp depicts jewellery made from recycled material. The necklaces on the stamp were handmade from old leather garments and metallic bits. At the lower edge of the stamp, a pair of earrings made from ostrich feather down appears. The jewellery is designed and produced by Anna Karlsson in her tiny workshop in Godby, Åland. She mainly uses recovered material, mostly leather but also yarn, pieces of glass or discarded cartridge cases.

Foto nr.: 32

JERSEY

Situated between France and mainland Britain, visitors to Jersey often come to enjoy the Island's beaches and unspoilt beauty, and to learn about its heritage, and the remarkable abundance of archaeological and historical sites and finds which range from Neolithic, to Roman, to Gothic, and so on. With two substantial castles built under British command, a host of Napoleonic defence towers, and many German fortifications constructed by occupying forces during WWII, it is easy to understand why Jersey remains a source of fascination.

Ancient Artefacts

St Lawrence Pillar, situated inside the parish church of St Lawrence, has been repurposed throughout history. Uncovered during the last renovation of the church in 1891, the artefact is thought to have started life as a Roman pillar before being used as a gravestone in approximately 600 AD. The stone was then repurposed for another gravestone in 800 AD and this is when the interlaced carving was thought to have been added.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

Trades and Crafts – Goldsmith

The motif is graphically represented with pictograms placed on a coloured background. A stylised hand symbolizes the theme of trades and crafts. On the Liechtenstein SEPAC stamp depicting the "Goldsmith" profession (value: CHF 2.00), one of the oldest metalcrafts, the pictograms show a hammer, pliers, tweezers and screw clamp.

LUXEMBOURG

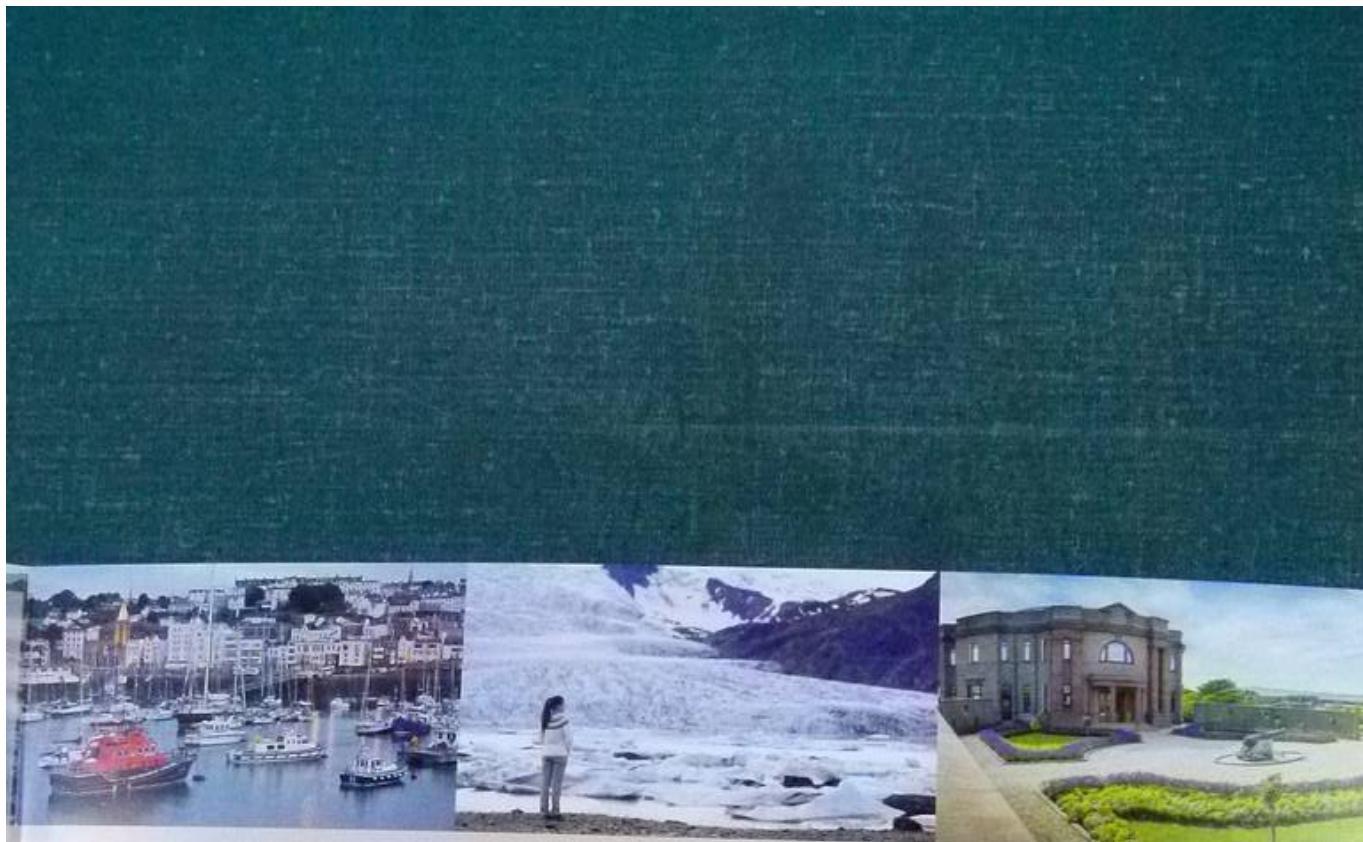

The craft sector is at the heart of Luxembourg's economic craft industry, which is made up of 6000 SMEs and represents companies in the Grand Duchy, offers stable and exciting to some 80,000 people. The craft sector is the largest employer in Luxembourg. It has a turnover of more than 11 billion euro contributes to more than 10% of the national GDP.

Green Fingers

"Green Fingers" is the name of the sculpture shown on this Sepac stamp. The sculpture was realized by the talented Els de Woude, a Dutch Artist working and living in Luxembourg. Creating art has always been her true passion. Her works in ceramics and painting. Her recent work is based on botanical maritime themes. She received in 2016 the jury award at the "Mains de Maîtres" exhibition.

Foto nr.: 33

GUERNSEY

The Bailiwick of Guernsey includes the island of Guernsey and four other islands - Alderney, Sark, Herm and Jethou. Guernsey lies less than thirty miles from the French coast and seventy miles from the south coast of England. The stunning coastline comprises flat sandy beaches, secret coves and rugged harbours and thanks to its temperate climate the island is host to a range of flora and fauna rarely found elsewhere in the British Isles.

The Guernsey Jumper

The knitted garment known as a 'Guernsey' first appears in the Middle Ages when people learnt how to knit with two or more needles. The jumper has not changed in design over the years, apart from the addition of family patterns for identification purposes for sailors. The traditional colour for a Guernsey is navy blue, but nowadays they are knitted in different colours, and are also made in cotton for summer wear.

ICELAND

"The Land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and mighty glaciers. It has cool summers and long rather mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and more recent literature, its music and films. The population of around 338,000 lives mainly in the coastal areas.

The Icelandic Sweater

The Icelandic SEPAC stamp features a common landmark of local handicraft: the woolen sweater. Solid and resistant, the "lopapeysa" was most likely inspired by different Nordic knitting traditions. Standardized in its traditional form in the late sixties, it has become increasingly popular. The pattern on the stamp, "Alafoss no. 51", designed by Mrs. Astrid Ellingsen, is certainly the most famous of all patterns.

ISLE OF MAN

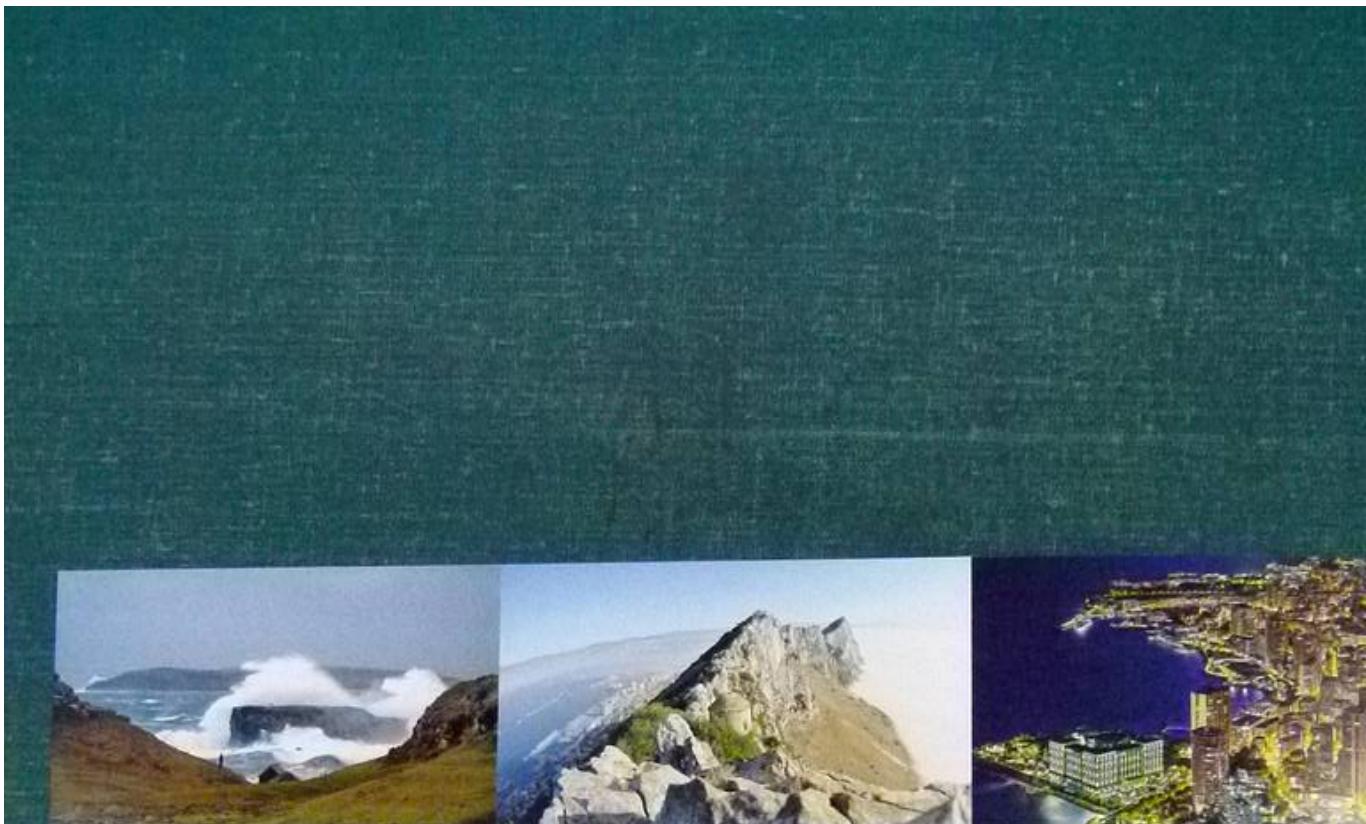

Amidst rolling countryside in the parish of Snaefell sits a remarkable house and estate known as Ardglass. Formerly the home to the subject of our SEPAC stamp Dr John C Taylor, this house enjoys both mountain and sea views; in one direction towards North Barrule and, in the other, to the Irish Sea and the lesser bays and harbours of the south of the Island.

Dr John C. Taylor OBE

The SEPAC theme of handicraft is embodied by the skill of the watchmaker and precision engineer in our stamp issue paying tribute to one of the greatest living British inventors and business leaders. Amongst Dr Taylor's many interests, the incredible Lynden Clock Collection is of world renown.

Foto nr.: 34

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands.

The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Torshavn.

Spectacular Views of Faroe Islands

They got a bit of a fright, the happy campers at Tórshavn's campground, when tremendous waves came crashing against the rocks just outside the place where they parked. Thousands of tourists visit the islands every year to see, feel and experience the mild North Atlantic summer season. However, if you want to experience the true playground of the sky and weather gods, you need only travel to the Faroes in the winter season.

GIBRALTAR

When you first see the Rock, whether it is from the air, from the sea or from the Costa del Sol, it is its impressive stature, towering isolated above the surrounding countryside, that causes the greatest impact. It has had this effect on people for many thousands of years. Gibraltar is a beacon which signals the position of the Strait of Gibraltar, the narrow neck which separates Europe from Africa and provides the only link between the Atlantic Ocean and the Mediterranean Sea.

Spectacular Views of Gibraltar - Catalan Bay

Catalan Bay is a small fishing village in Gibraltar. Historically, Catalan Bay had been populated by Genoese fishermen who were part of a much larger settlement pattern along the eastern coast of the Rock during the seventeenth and eighteenth centuries. During the nineteenth century only fishermen were permitted to live in Catalan Bay. The families who live in the village today are mainly descendants of these Genoese fishermen and are colloquially known as calafetos.

Monaco

Located in Southern Europe on the Northern extremity of the Mediterranean Sea, the Principality of Monaco is a sovereign monarchy headed by H.S.H. Prince Albert II. It is the smallest country, by size, in the world. The Principality enjoys a cosmopolitan international lifestyle. A gateway to Europe, Monaco is home to over 139 different nationalities have decided to make their home. www.oetc-monaco.mc

Spectacular view of Monaco

Nestled between the Mediterranean Sea and the Alpes, Monaco enjoys an exceptional setting. The picture shows a view on Port Hercules. Thanks to its temperate Mediterranean climate, Monaco has particularly mild winters. How could it be otherwise, when in February it snowed in Monaco and in the neighbouring Alpes? The contrast between the snow on the heights of the Principality and the shade of blue in the sea made for a spectacular view.

Foto nr.: 35

ÅLAND

The Åland landscape displays great diversity ranging from barren skerries to forests and fertile cultivated land and enclosed pastures on the main island. The bedrock in most parts of Åland is red rapakivi granite, which forms a characteristic feature of the landscape by giving rise to countless inlets, sounds, headlands and islands. The mosaic-like archipelago consists of close to 6,700 islands and skerries. Only about 60 of the islands are inhabited.

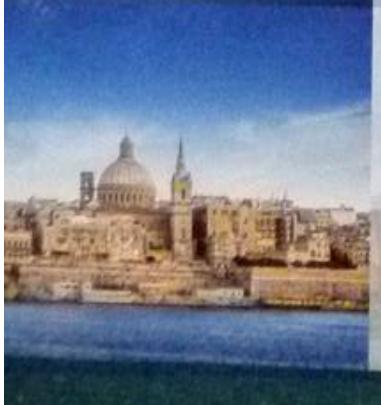

Spectacular views
The stamp illustrates the breath-taking scenery of waves breaking against the cliffs. Åland nature photographer Niels Nordlund captured the spectacular stamp motif on a December afternoon at Hammarudden, located some 9 kilometres west of Mariehamn.

Greenland

Greenland is the world's largest island with a total area of approx. 2.2 million square kilometres. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 56,300 it is the least densely populated country in the world.

Amazing view over Tasilag
Since September 1999 all of Greenland's postage stamps have been issued from POST Greenland's philatelic bureau in Tasilag, East Greenland. The beautiful photo that adorns the 2018 Greenlandic Septo stamp was taken from the top of Seaman's Mountain, southwest of Tasilag. The man who recorded the beautiful panoramic photo is Erwin Reinhäder of Austria.

MALTA

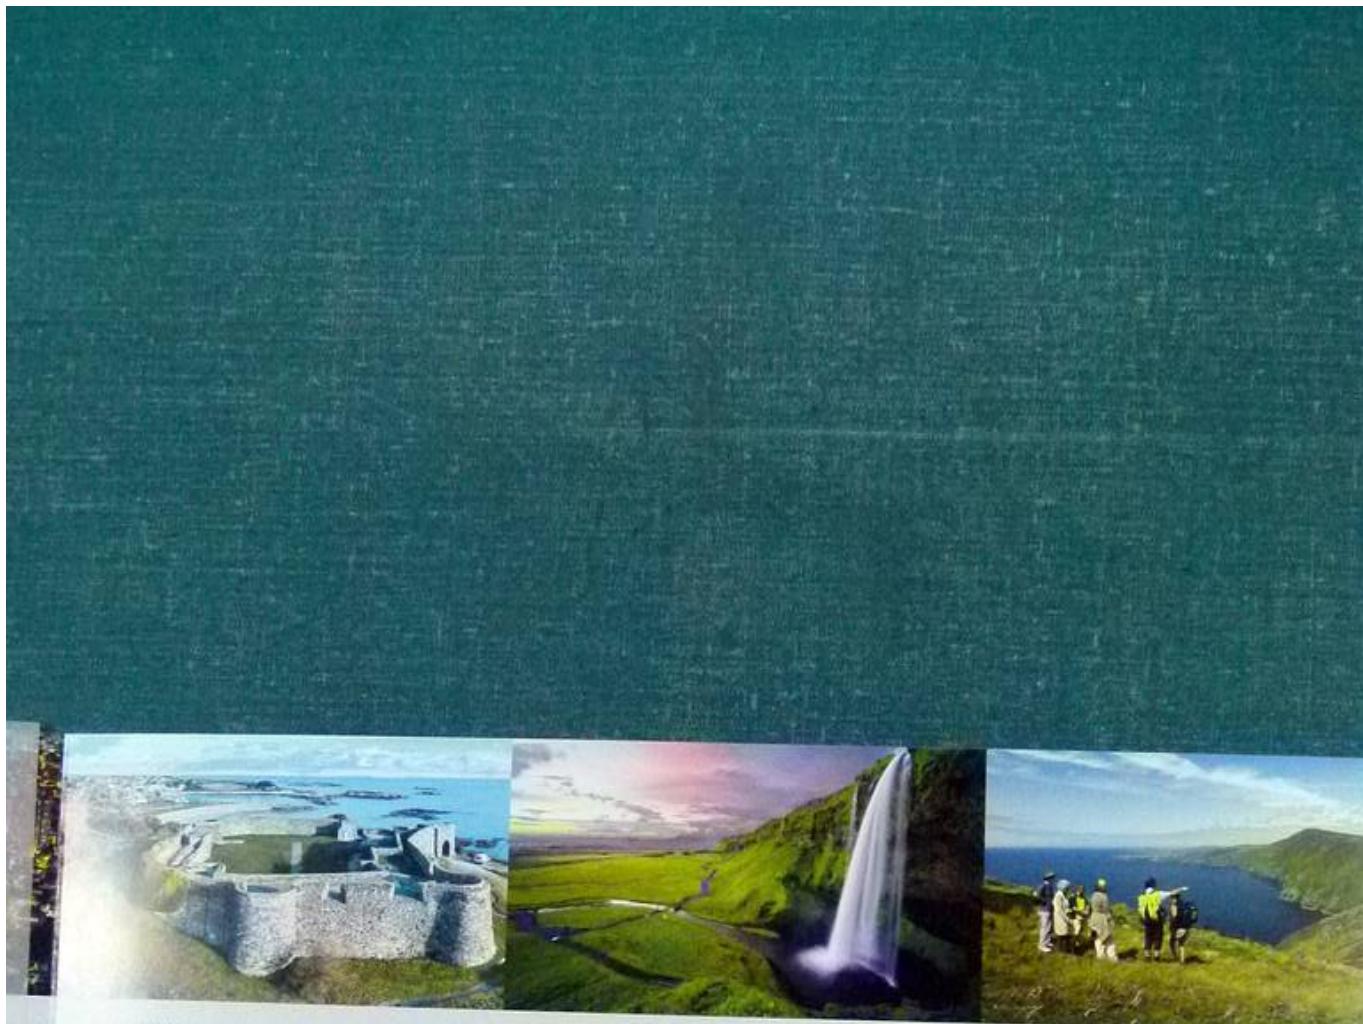

Malta's strategic location in the middle of the Mediterranean Sea has given it a rich and varied history. Nearly every major power who dominated the region has left a cultural imprint: the Phoenicians, Romans, Arabs, Aragonese, Knights of St. John, the French and finally the British. It achieved independence from the United Kingdom in 1964, became a Republic in 1974 and joined the European Union in 2004 – adopting the Euro as its national currency in 2008.

The Gozo Aqueduct
MaltaPost's SEPAC Stamp features the Gozo Aqueduct. Also known as 'ad-Darawessha', the aqueduct was built under the British Rule between 1839 and 1843. It covered a distance of 2 kilometres and supplied fresh water, bringing it from Għar Ilma (Water Cave) hill to Victoria, the capital city of Gozo.

MALTA

Foto nr.: 36

GUERNSEY

Guernsey, Alderney, Sark and Herm make up this small archipelago in the bay of St Malo. An incredibly picturesque group of islands, the Bailiwick has been described as offering stop-in-your-tracks scenery on a grand scale. Added to this are the islands' unique geographical position, which sets the scene for a fascinating heritage. The Bailiwick has been pivotal in battles between the UK and France and suffered occupation by the Germans during World War II.

Spectacular view of the Reservoir, Guernsey

Our set of stamps depicts aerial scenes of Guernsey not often showcased. A young Guernsey-based photographer 'The Drone Ranger', captured striking aerial scenes of the island from an elevated position. Guernsey has more than its fair share of stunning scenery, fascinating history and rich heritage. The reservoir in St Saviour's parish is situated in the rural interior of Guernsey and provides an important woodland habitat for local wildlife as well as the scenic 'Millennium Walk' trail.

ICELAND

"The Land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and mighty glaciers. It has cool summers and long, rather mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and more recent literature, its music and films. The population of around 349,000 lives mainly in the coastal areas.

Spectacular view of Iceland

Surrounded by mighty cliffs and overlooking the ocean, the awe-inspiring mountain Vestrahorn stands 454 metres on a headland situated 10 kilometres east of Höfn in Hornafjörður in southeastern Iceland. It is one of the few mountains in Iceland composed almost exclusively of gabbro with occurrences of granophyre. The region surrounding Vestrahorn is on the Environment Agency of Iceland's conservation list.

ISLE OF MAN

Seasonal changing seascapes and landscapes, with an array of beautiful flora and fauna combined with a wealth of heritage make for the perfect place to live. From time immemorial we have welcomed friends to our shores which has instilled in us a strong sense of community. You are very welcome.

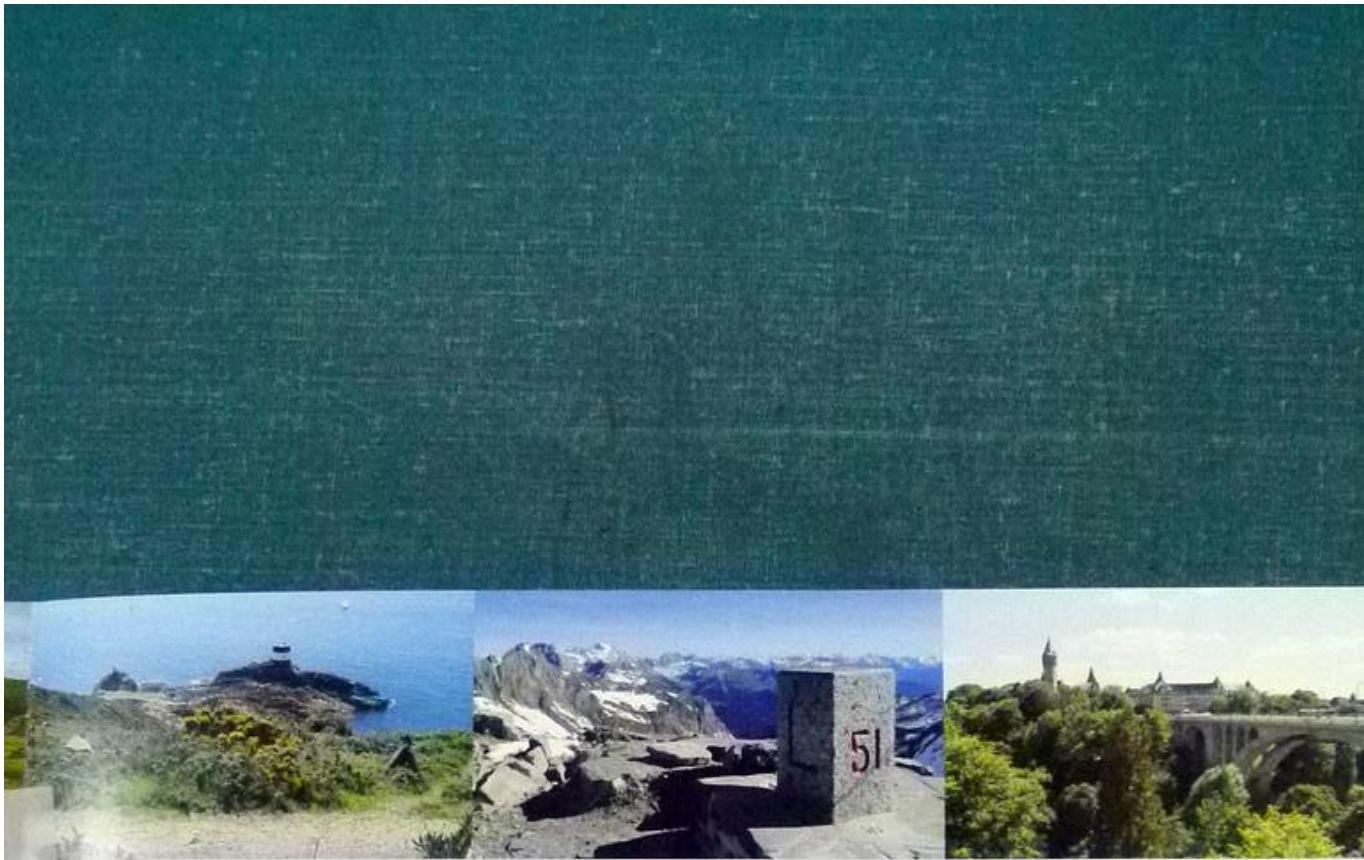

Year of our Island

2018 has been designated The Year of Our Island, we hope to be proud of as we celebrate the many positive aspects and working on our Island.

Isle of Man based professional photographer Simon selected images that we hope convey the variety of experiencing contrasting scenery that Manx residents have right on our doorsteps.

Foto nr.: 37

JERSEY

Jersey's central, southerly position in the Bay of St Malo, just 30 miles from France and 137 from the United Kingdom, makes it one of the warmest places in the British Isles. With mild winters and short autumns, the growing season comes early to Jersey and spring flowers are typically as early as February. Surrounded by tidal waters warmed by the Gulf Stream, visitors and locals alike can enjoy the Island's scenic beauty taking in wonderful cliff-top rambles, coastal walks and cycling along quiet lanes meandering through picturesque valleys.

Sea in Portelet Bay

Accessible by a long pathway, Portelet Bay is on the southwestern coast of the Island. The islet known as Ile au Guerlain can be walked on foot at low tide and is home to Janvrin's Tomb, the final place of Philippe Janvrin who died of the plague on board ship in 1721. Today, many people enjoy climbing up to the islet and watching ships sailing to and from the main port in the Island's capital, St Helier.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

Summit Crosses – Klausli

The folded layers of rock at "Klausli" present a fascinating sight. The stamp with the summit rising to a height of 2,585 metres above sea level serves as Liechtenstein's SEPAC stamp this year. The image depicts a breathtaking view of Liechtenstein's mountain landscape and gives a vague idea of just how impressive the alpine world of the small state is.

LUXEMBOURG

In the Grand-Duchy of Luxembourg one can enjoy the diverse landscapes of the nature parks in the Luxembourg Ardennes, also medieval castles and numerous hiking or mountain bike trails throughout the region. In the south of the country, one discovers the industrial past of the Red Rocks region, and its former steel-works sites. Oenophile? Discover the Moselle region with its steep vineyards.

Beaufort castle

Beaufort castle was built in 4 different construction periods between 1050 and 1650. In 1928 the new owner cleared the unoccupied ruins which had been neglected for 300 years. A short distance from the walls one realises that the ruins have almost merged into the calm, green and harmonious environment. A spectacular view.

Foto nr.: 38

FAROE ISLANDS

Situated in the North Atlantic Ocean only two hours by plane from mainland Europe, the Faroe Islands offer 1,289 kilometres of coastline and a proximity of no more than five kilometres to the ocean from any point of the islands.

The close proximity provides the visitor with a variety of experiences of nature – from dramatic landscapes meeting the wild ocean to the peacefulness of the mountains to the nightlife of the capital Tórshavn.

Old residential houses

The beautiful farmhouse in Kirkjubøur is the Faroe Islands' oldest inhabited log house – so old that its origins disappear in the fog of medieval history. The oldest parts of the building are two log houses and the so-called rokstova. The log houses have been renovated over time on the inside, but rokstovan remains unchanged, as it has been for centuries. A beautiful house and a magnificent example of old Faroese architecture.

Greenland

Greenland is the world's largest island with a total area of approx 2.2 million sq. km. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 56,300 it is the least densely populated country in the world;

Poul Egede's House in Ilulissat

The house that we have reproduced on this year's Greenlandic Sepac stamp was built back in 1751. The building is located in Ilulissat, a small settlement about 15 km south of Ilulissat, approximately 300 km north of the Arctic Circle. Once a traditional whaling town called Claushavn, nowadays a centre for a unique blend of tourism, nature, fisheries, cultural heritage and sustainability.

Monaco

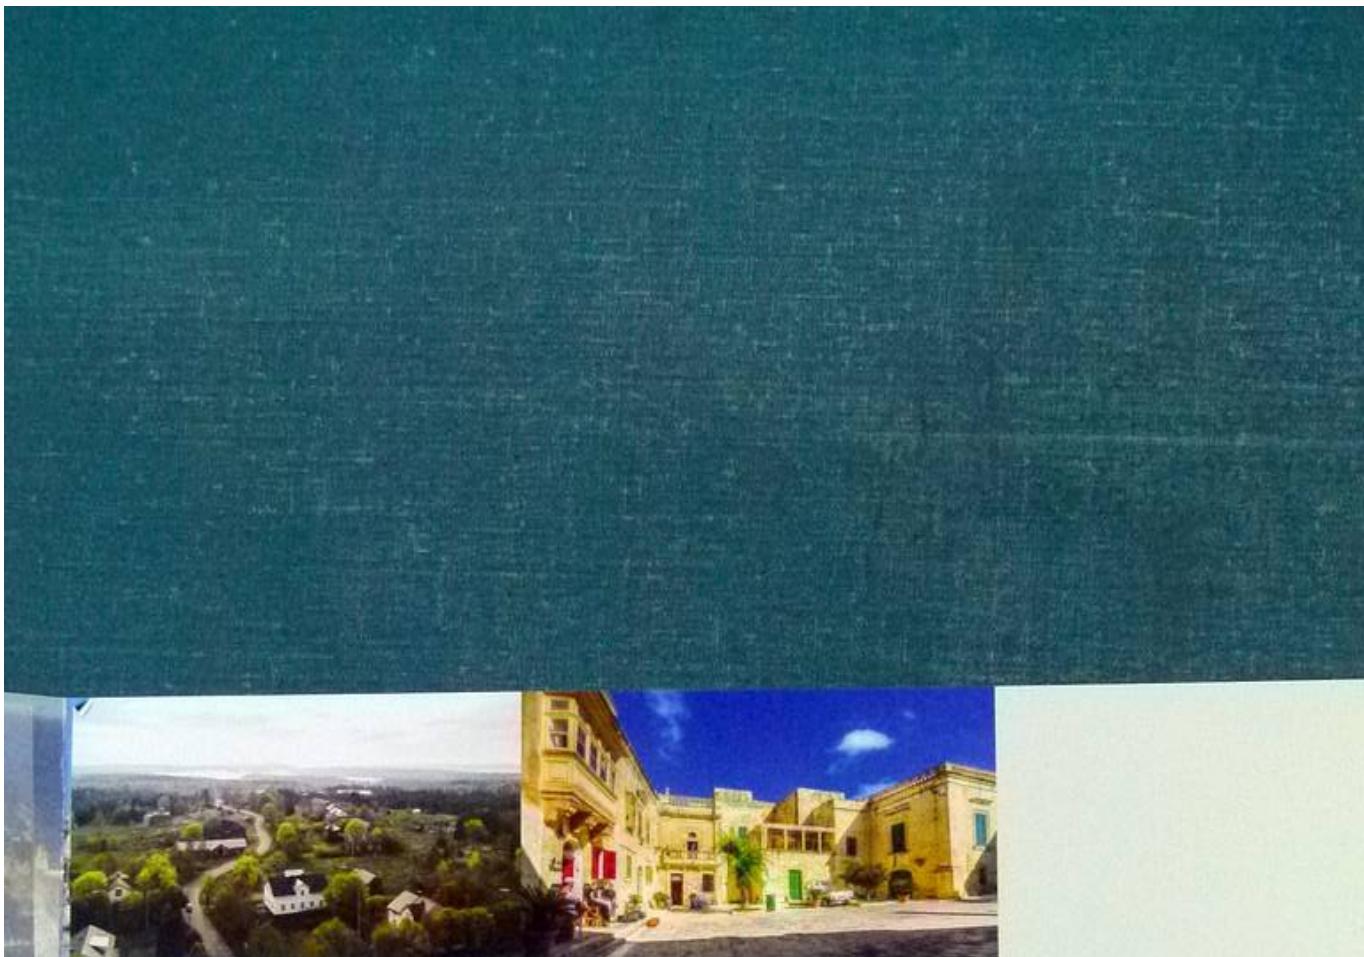

Located in Southern Europe on the Northern shores of the Mediterranean Sea, the Principality of Monaco is a constitutional monarchy headed by H.S.H. Prince Albert II. It is the smallest country by size, in the world. The Principality enjoys a cosmopolitan international lifestyle. A gateway to Europe, of 139 different nationalities have decided to make Monaco their home. www.oep-monaco.mc

Ancient house of Monaco

Nestled between the Mediterranean Sea and the Alpes, Monaco enjoys an exceptional setting. The evolution of looks forward to maintaining perfect harmony between tradition and modernity. The Monegasque stamp depicts a typical Monaco-Ville, the historic district of Monaco situated on a rocky peninsula.

Foto nr.: 39

ÅLAND

Traditionally, houses in Åland were built from dovetailed logs. In the 1800s, glassed-in verandas became popular and many houses started to be faced with industrially produced planed wood. The capital Mariehamn is associated with both picturesque wooden houses from early 1900s, designed by Finland's first female master-builder Hilda Hongell, and monumental buildings in a national romantic style by Lars Sonck, one of Finland's greatest architects, the Church of Mariehamn and the Town Hall among others.

Old residential buildings

Åland artist Kjell Ekstrom has illustrated a style of house and colour fashion that was popular in Åland from around 1900 until World War I. The planed paneling of the loft was painted in oil paint while red ochre was used for the carpentered and unplanned house body. The stamp features the manor house of the Jonesas farm in the village of Onnungsby, one of only a few preserved houses of this type in the Åland countryside today.

MALTA

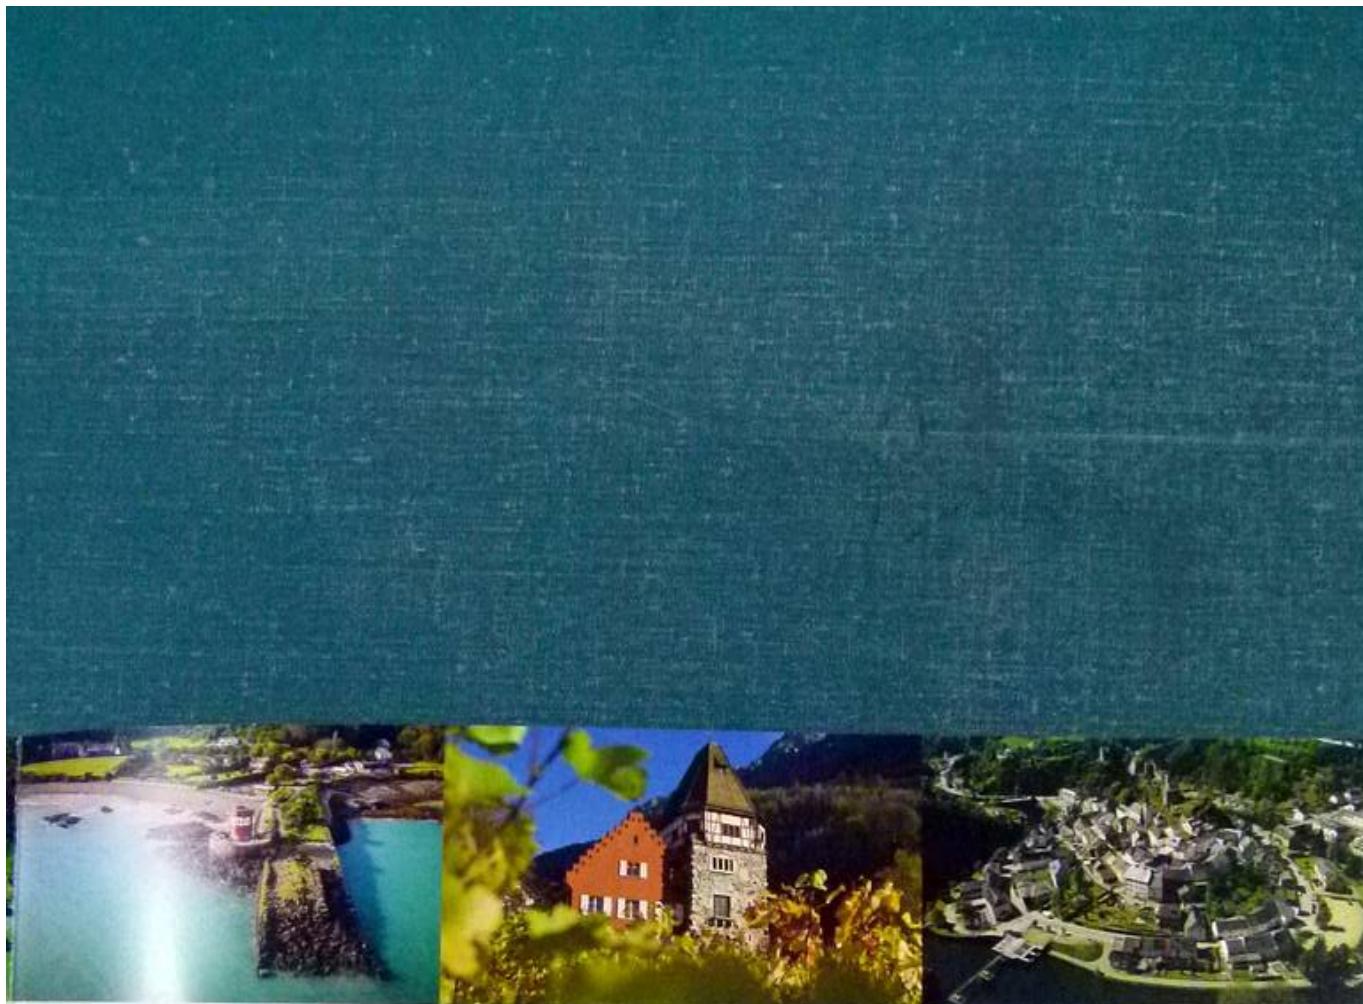

Malta's strategic location in the middle of the Mediterranean Sea has given it a rich and varied history. Nearly every major power who dominated the region has left a cultural imprint: the Phoenicians, Romans, Arabs, Aragonese, Knights of St. John, the French and, finally the British. It achieved independence from the United Kingdom in 1964, became a Republic in 1974 and joined the European Union in 2004 – adopting the Euro as its national currency in 2008.

Old Residential Houses

Malta's SEPAC Stamp features an old residential house found in many of Malta and Gozo's villages and towns. It depicts local tradesmanship in masonry work, woodwork and iron work. Such houses have today become an icon and a rarity, and are very much sought after by locals and foreigners.

Foto nr.: 40

JERSEY

Jersey, the largest and most southerly of the Channel Islands, is situated in the Bay of Mont St Michel off the north-west coast of France. The Island is divided into twelve parishes, with the capital of St Helier on the south coast. Rich in heritage and culture, Jersey has many buildings of historical and architectural importance. Magnificent castles, lighthouses and Napoleonic Martello Towers stand guard over its beautiful bays and the countryside boasts historic churches and old granite farmhouses.

Jersey Architecture - Hamptonne

Hamptonne Country Life Museum is a 15th century farm complex made up of three houses, a cider barn and stables. The property has been renovated by the three main heritage organisations in Jersey: the National Trust for Jersey, the Société Jersiaise and Jersey Heritage. The stamp shows Langlois House, one of the three houses on the complex. Originally built in 1445, it has some of the older architectural features in Jersey.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

The Red House

The Red House in Vaduz is a stepped gable structure to which a residential tower and wine press building are annexed. The building dates back to the late Middle Ages and has been extended with additional structural units over the centuries. Its dark red paint, from which the name "Rotes Haus" derives, can be traced back to at least the mid-19th century.

LUXEMBOURG

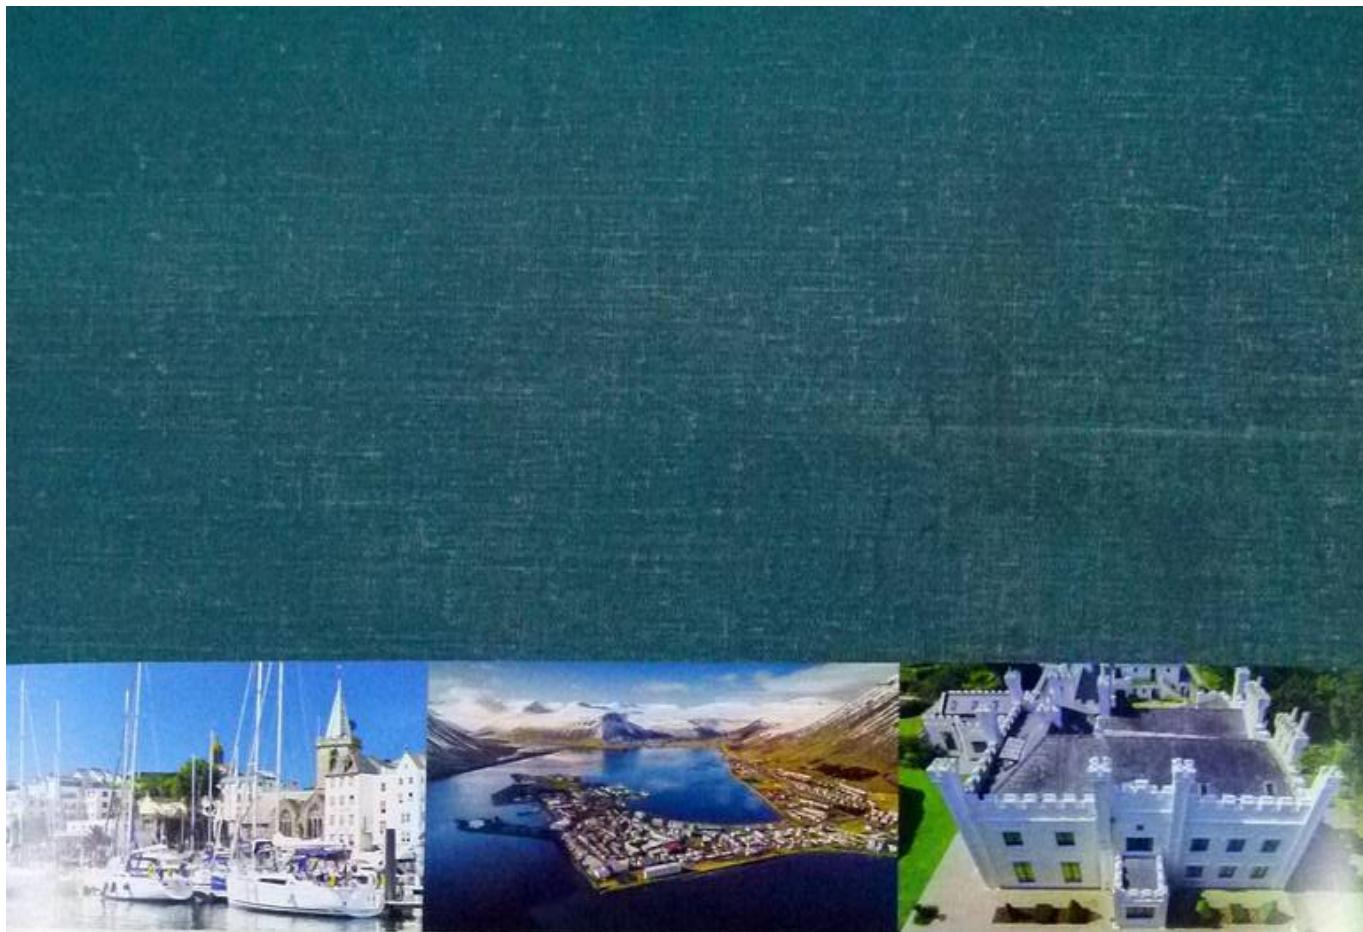

Luxembourg is the country par excellence where history witnesses rub shoulders with the avant-garde spirit of contemporary Luxembourg architecture. The many churches, abbeys, bridges and villas covering Luxembourg are as much part of the national architectural heritage as the houses themselves. They blend harmoniously with the surrounding architecture. Urban planning, architecture and engineering in Luxembourg, in dynamic evolution, make the country a laboratory at the forefront of new concepts in sustainable construction.

Villa Clivio

The Villa Clivio (built in 1908) is a hidden architectural jewel in Luxembourg-City, located in the inner courtyard of the BCEB bank. It is named after its builder, the entrepreneur Cesare Clivio who came from Varese in Lombardy (Italy) where the "Floreal" or "Liberty-style" architectural style was flourishing at that time.

Foto nr.: 41

GUERNSEY

Le Bailliwick of Guernsey, which includes Guernsey, Alderney, Sark and Herm, is self-governing, has its own currency and stamps at the same level of independence it has had since 1069. Guernsey's St Peter Port has been home to a busy harbour as far back as the Roman era. With its cobbled streets and picturesque street scenes, many consider St Peter Port to be one of Europe's prettiest harbour towns.

Hausmann House

A SEPAc stamp is housed in a miniature sheet featuring Hausmann House, the Guernsey home of Victor Hugo. He bought Hausmann House in 1856 after being exiled from France for voting Napoleon III in 1851.

Hugo spent 14 years living and working here, writing some of his most masterpieces and re-designing the space around him. The St Peter Port town house was the perfect canvas for Hugo to express himself and he set to work lavishly filling it with a mélange of styles.

ICELAND

"The Land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and mighty glaciers. It has cool summers and long, rather mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and more recent literature, its music and films. The population of around 349,000 lives mainly in the coastal areas.

The Factor's House in Isafjordur

The Factor's House in Nefstikauðstadir in Isafjordur in the West Fjords is one of the oldest houses in Iceland. It was built by Danish merchants in 1765 and is a prime example of the oldest types of residential buildings from the 18th century, having been in continuous use as a residence since the beginning. The Factor's House is originally a type of log house which has been well maintained throughout the centuries and has been protected since 1975.

ISLE OF MAN

Milntown house and gardens date from the 16th century. John McCrystyn, a Deemster between 1511-1533, merged his own Alkardale Estate.

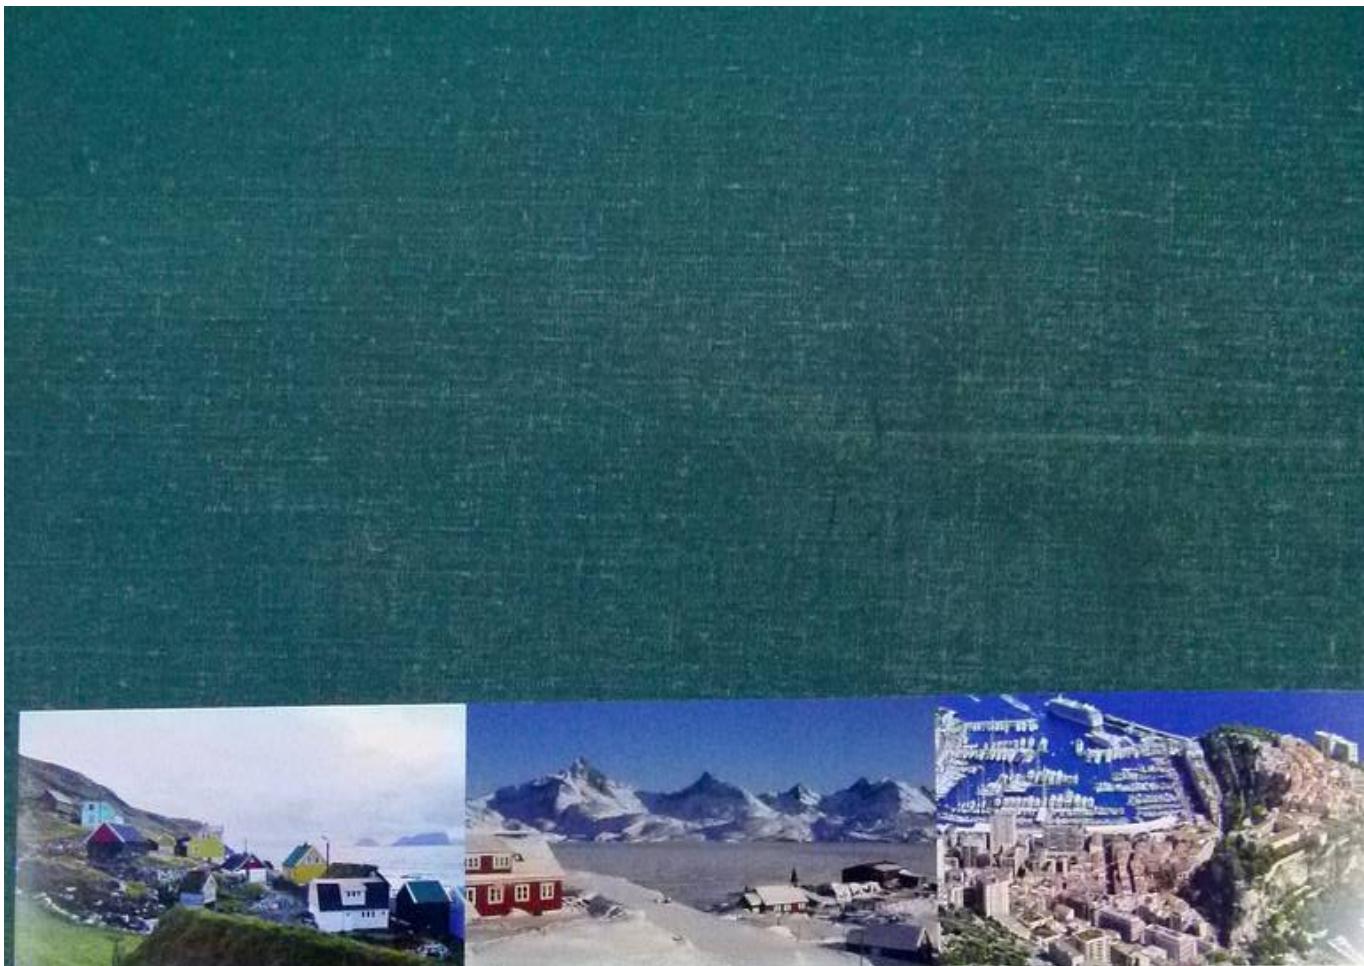

The McCrystyn name soon became written as Christian and Milntown was known as the Christian family seat until the death of William Bell Christian in 1886. The rebellious William Christian became a hero to the Manx people and was nicknamed Illian Dhone, or Brown William, on account of the colour of his hair.

Ronaldsway Farm

After the capture and execution of the Earl of Derby in England in 1651, Illian Dhone called a great gathering of 300 Manxmen at his Ronaldsway farm and inspired rebellion against Derby's rule. He arranged the bloodless transfer of power from the Royalists to the Parliamentarians and became a hero to the Manx people. Later arrested and arraigned for treason by the 8th Earl of Derby, his life was ended by firing squad at Hango Hill in January 1663.

Foto nr.: 42

FAROE ISLANDS

The Faroe Islands is an archipelago of 18 mountainous islands located halfway between Iceland and Scotland in the North Atlantic Ocean. The first known settlers, according to stories passed down through generations, were Irish monks in the sixth century. The islands' population of nearly 32,000 is spread out across the 17 inhabited islands. These islands are connected by excellent infrastructure linked together by a comprehensive road network and tunnel and ferry connections.

Moon Pigeons

One of the oldest Faroese artworks from approx. 1840 by Þóðrikur á Skarvanesi. A brightly coloured row of birds meets the eye, all in profile, slightly shifted to the rear of each other, each on its own small elevation.

They are made in gouache, i.e. water colour with high pigment concentration as well as a white dye which solidifies the colours while dimming them at the same time.

Greenland

Greenland is the world's largest island with a total area of approx. 2.2 million sq. km. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 57,000 it is the least densely populated country in the world.

Artwork in Greenland's National Collection

The artwork depicted is a watercolour by Christine Elisabeth Lund Deichmann (1869 – 1945). The title of the artwork is 'Mother pulling off her daughter's boots'. Christine, her husband and their daughter lived in Greenland from 1901 to 1910. As the wife of a doctor, Christine was able to paint many wonderful everyday portraits.

Monaco

Located in Southern Europe on the Northern central coast of Mediterranean Sea, the Principality of Monaco is a constitutional monarchy headed by H.S.H. Prince Albert II. It is the second smallest country, by size, in the world. The Principality offers a cosmopolitan international lifestyle. A gateway to Europe, over 130 different nationalities have decided to make Monaco their home. www.oetp-monaco.mc

Painting of the collection of the Prince of Monaco

In order to illustrate the common theme of "artwork in the collection", the Monegasque stamp represents L'Indolente painting by the impressionist painter Eva Gonzales (1849–1879) whose paternal grandfather was Monegasque. The work below is the collection of the Prince of Monaco.

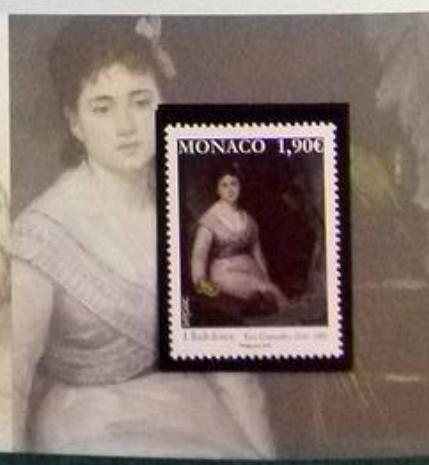

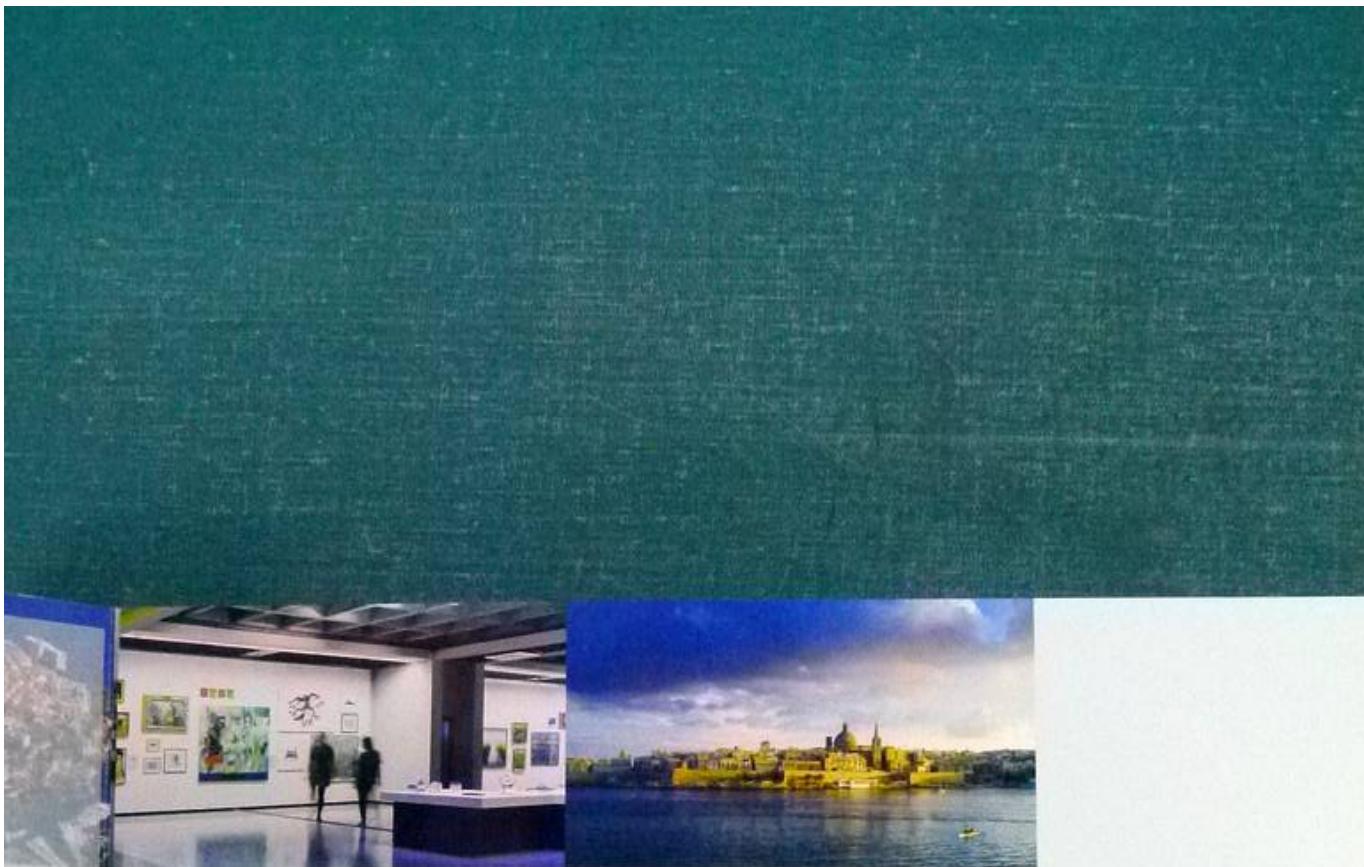

Foto nr.: 43

ÅLAND

Nature has been and remains the main source of inspiration for Åland artists, and international movements have had little influence. The collection of Åland Art Museum presents a broad spectrum of contemporary and old art from local artists or artists with a connection to Åland. One of the best-known artworks is 'Åland Peasant Bride' (1869) by Karl Emanuel Jansson, who belonged to the Düsseldorf School of Painting, but the collection also holds artworks of prominent Finnish and Swedish artists active in the Örnsköldsvik Artists' Colony (1886–1914).

Artwork in national collection

The 1976 Sahma triptych is on display at the Parliament of Åland. The painting was made of acrylic on panels by Henrik Nylund (1945–1982). During his short life and artistic career, he made a lasting imprint in the Åland worlds of art and culture. Debating as artist in 1971, he was fully autodidact and created both simple drawings and monumental paintings in ink, oil and watercolour.

MALTA

The islands of Malta, which include sister islands Gozo and Comino, are situated in the Mediterranean Sea, 60 miles south of Sicily. With a history spanning over 7000 years, and at the crossroads of strategic maritime routes, Malta has been a home, stronghold, trading post and refuge to many civilization.

Artwork in national collection

The stamp portrays artwork by Edward Caruana Dingli – one of Malta's foremost painters of the early 20th century. The original painting is exhibited at MUZA, the National Community Art Museum of Malta.

The stamp features the annual procession of Corpus Christi as it snakes past the facade of St. John's co-Cathedral in Valletta. Sombre in intent yet festive in spirit, the artist successfully captures a moment in time. Painted in 1927, it illustrates to perfection Caruana Dingli's style.

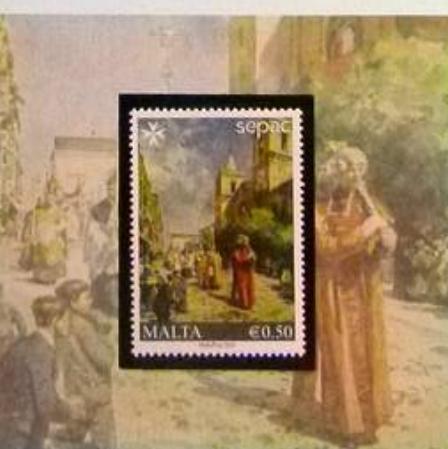

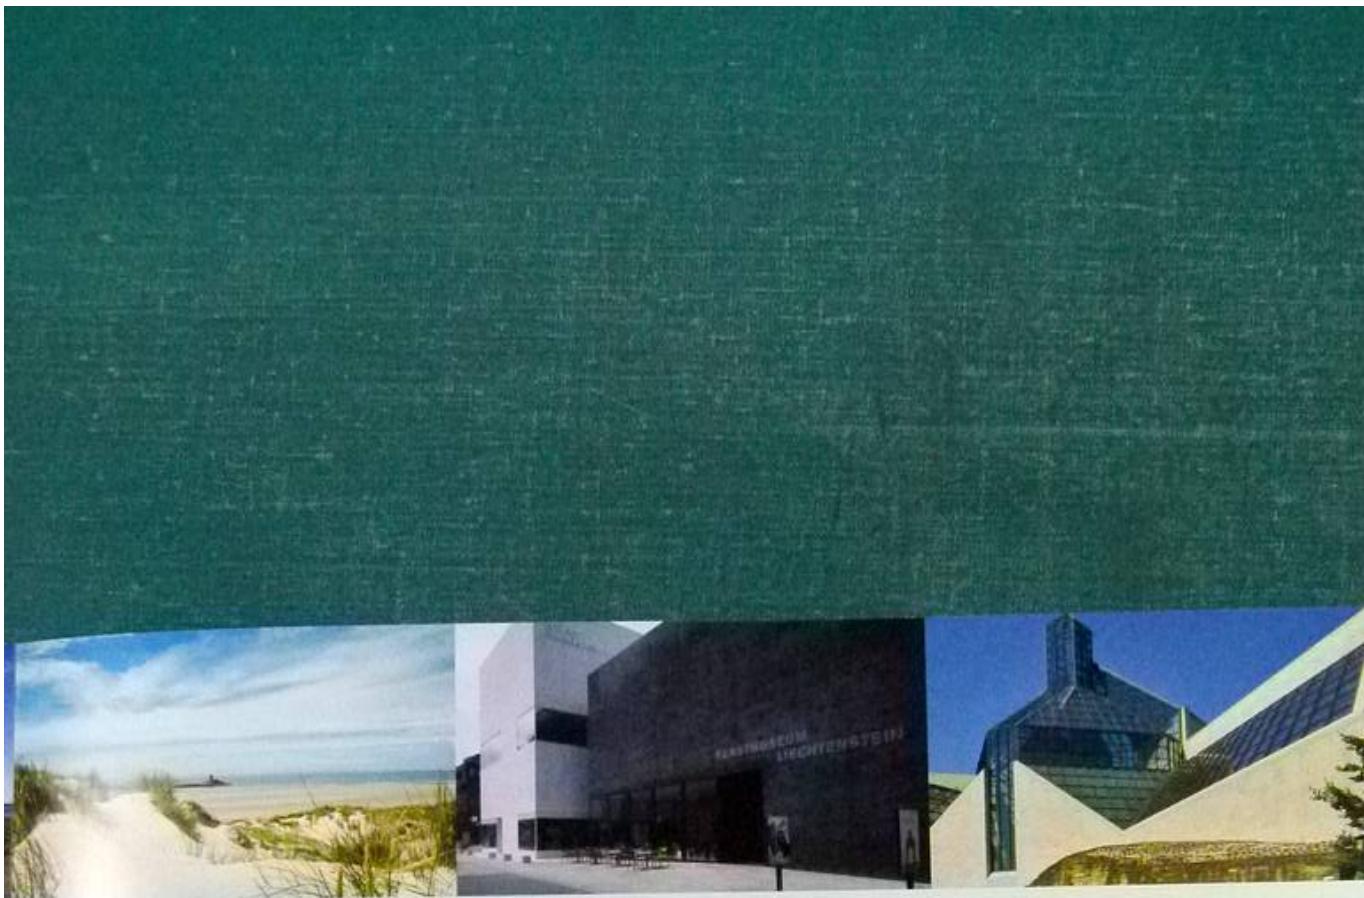

Foto nr.: 44

JERSEY

The largest of the Channel Islands, Jersey is located off the north-west coast of France. Surrounded by beautiful beaches, it boasts one of the largest tidal ranges in the world. In fact, when at low tide, the island almost doubles in size. Jersey is known for its produce; Jersey Royal potatoes, celebrated for their unique flavour, have been grown in the Island for 140 years, whilst Jersey cows produce some of the creamiest milk in the world.

Jersey Artists – Claude Cahun

Claude Cahun was a French surrealist photographer, sculptor and writer. Best known for her self-portraits, she is famous for creating some of the most enigmatic photographic images of the 20th century. Cahun lived in Jersey with her partner Marcel Moore from 1937 until her death in 1954. The Jersey Heritage Trust collection represents the largest repository of Cahun and Moore's work.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

Untitled (Indian Banner: World)

The original "Untitled (Indian Banner: World)" by American artist Matt Mullican from 1982 is a printed cotton banner measuring over two by two metres. It shows a stylised globe in a red frame. The Kunstmuseum collection houses several works by Matt Mullican. Life and death, living space and society as well as perception of the world are themes that he uses to reflect his experience of the world.

LUXEMBOURG

Mudam Luxembourg – Musée d'Art Moderne Grand-Duc Jean / Ie Ming Pei Architect Design opened in 2006. Through its collective exhibitions, programs and partnerships, Mudam Luxembourg aims to advance its mission to collect, present and make accessible the most relevant art of our times, for the largest public possible. The work "Many spoken words" is one of the highlights of the collection. ©Photo Rémi Villaggi / Mudam Luxembourg

Many spoken words – Su Mei Tse

Through this work, as much visual as it is sonorous, the artist pays homage to literature, evoking the infinite potential of words and the eternal renewing of creation. The multiple and incessant dialogues of Many Spoken Words make the fluidity of the spirit, words and creativity perceptible, and leave indelible traces.

Foto nr.: 45

GUERNSEY

The Bailiwick of Guernsey, which includes Guernsey, Alderney, Sark and Herm, is self-governing, has its own currency and stamps and enjoys the same level of independence it has had since 1066. Guernsey's St Peter Port has been home to a busy harbour as far back as the Roman era. With its cobbled streets and picturesque seafarant murals, many consider St Peter Port to be one of Europe's prettiest harbour towns.

Cobo Wild Flowers in Pink Pot

Guernsey's stamps showcase the work of local artists. Our SEPAC stamp depicts a painting, 'Cobo Wild Flowers in Pink Pot', by artist Olympia McEwan, a Fine Art graduate who takes inspiration from Japanese imagery and the history of art in which flowers are a symbol of happiness, affection and virtue. The wild flowers portrayed can often be found on Guernsey's verges and wild spaces.

ICELAND

"The land of Fire and Ice" is the home of fiery volcanoes, impressive mountain ranges and mighty glaciers. It has cool summers and long, rather mild winters. What distinguishes the Icelandic scenery is its unique natural beauty, spectacular contrasts and the absence of pollution. The country is well known for its ancient and more recent literature, its music and films. The population of around 349,000 lives mainly in the coastal areas.

Skjaldbreiður

Iceland's preeminent landscape artist Jón Stefánsson (1881-1962) composed the oil painting Skjaldbreiður in 1937. 1060 m high with a 300m wide crater, the shield volcano Skjaldbreiður (broad shield in Icelandic) is a well-known landmark for all Icelanders. Its eruption around 9000 ago formed the lava fields of Þingvellir, where the Icelandic Parliament was founded in 930.

ISLE OF MAN

The Douglas promenade sweeps from the Sea Terminal to the Derby Castle Electric Train Station and is the sight that greeted millions of tourists since Victorian times. Three kilometres of stonework and iron railings form the wall that protects the promenade walkway and faces the 'o' of 'Refuge' built by Sir William Hillary, himself a former Douglas art school graduate Michael Sandle RA, in a bronze informed by a drawing by Norman Sayle RI.

The Douglas School of Art

The School originated in the 1880s and generations of Manx owe a debt of gratitude to a succession of dedicated, talented fondly-remembered practitioners. Norman Sayle RI (1926-2003) remains the most celebrated and admired artist and lecturer recent times and his Douglas Promenade Railing watercolor one of the most popular works with visitors to the Island's National Collection.

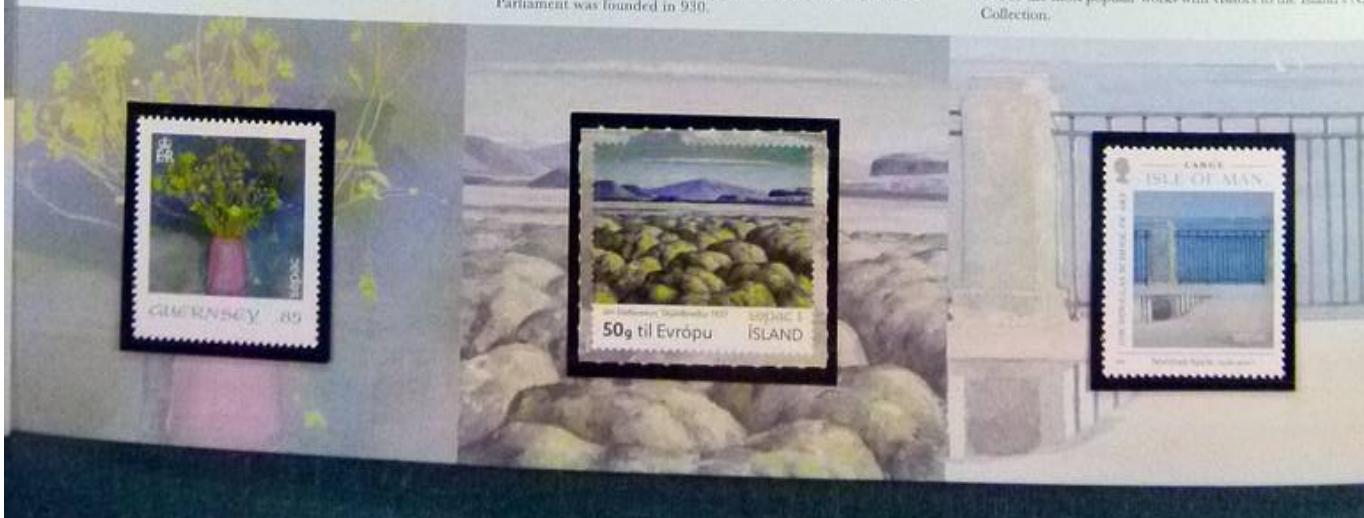

Foto nr.: 46

FAROE ISLANDS

The Faroe Islands is an archipelago of 18 mountainous islands located halfway between Iceland and Scotland in the North Atlantic Ocean. The first known settlers, according to stories passed down through generations, were Irish monks in the sixth century. Today the islands' population of 52,000 is spread out across the 17 inhabited islands. These islands are connected by excellent infrastructure linked by together by a comprehensive road network and tunnel and ferry connections.

Faroe Islands on historical maps II

The stamp illustrates Sebastian Münster's map "Septentrionales regiones" from 1570. Sebastian Münster (1488-1552) was the most important geographer of the sixteenth century. He was also famous for his iconic chart of sea monsters and beasts, both mythical creatures and real. His Cosmographia, published in 1544, spread geographical knowledge wide over Europe. He died May 1552 in Baed of the Black Death.

Greenland

Greenland is the world's largest island with a total area of approx. 2.2 million sq. km. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 57,000 it is the least densely populated country in the world.

Historical maps of Greenland

POST Greenland's 2021 Sepac stamp was created by illustrator and graphic artist Nuka K. Godfredsen. While working on the stamp, Nuka was inspired by an old map of Greenland that showed Gustaf Holm's and G. C. Amdrup's 1884 – 85 and 1900 sailing routes, as well as maps of the coast north east of Tasiilaq according to the diagrams that were prepared for Holm, Amdrup and Kruse by W. Thalbitzer.

Monaco

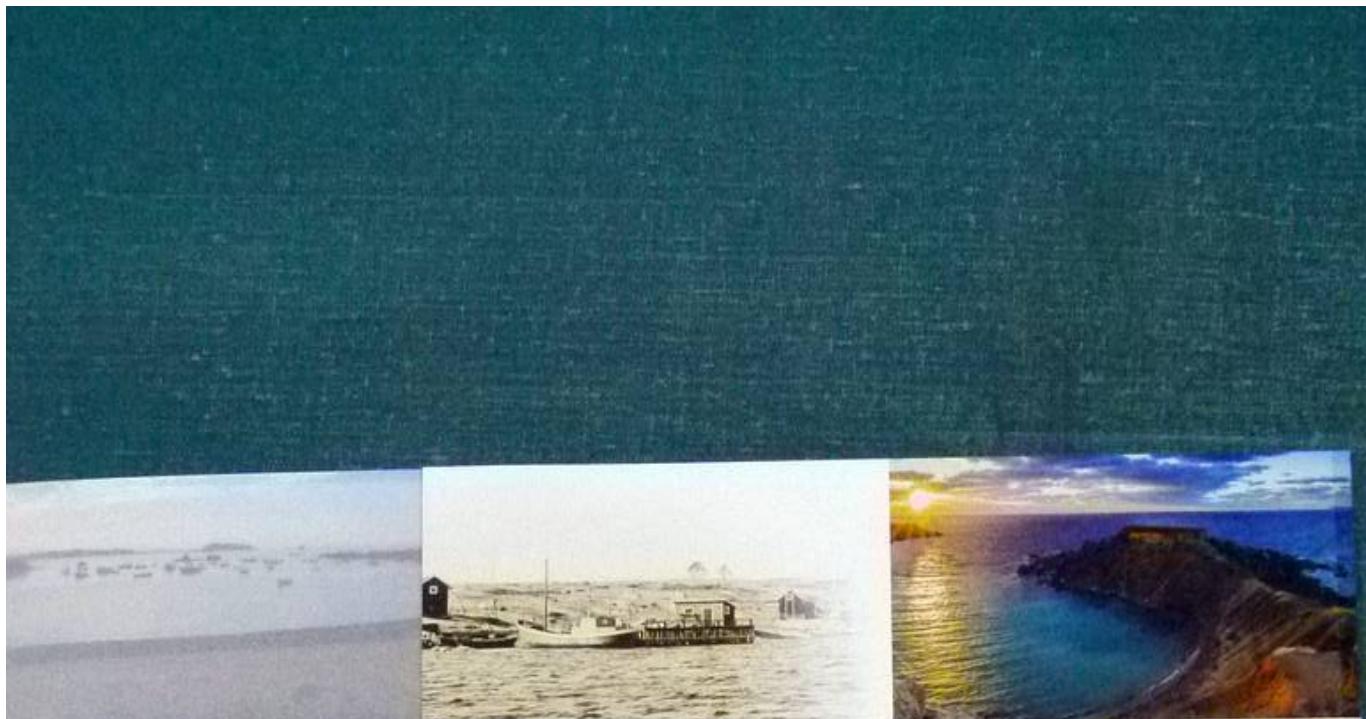

Located in Southern Europe on the Northern central coast Mediterranean Sea, the Principality of Monaco is a constitutional monarchy headed by H.S.H. Prince Albert II. It is the smallest country, by size, in the world. The Principality has a cosmopolitan international lifestyle. A gateway to Europe, of 139 different nationalities have decided to make Monaco home. www.oep-monaco.com

Old map of the Principality of Monaco

In order to illustrate the common theme of "old maps", the Monegasque stamp depicts a map of the Principality of Monaco from 1914. This map gives the opportunity to see the spectacular evolution of the Monegasque territory. The Principality has intensified in a century. New districts have emerged, particularly to median lands reclaimed from the sea.

GUERNSEY

The Bailiwick of Guernsey, which includes Guernsey, Alderney, Sark and Herm, is self-governing, has its own currency and although at the same level of independence it has had since 1868, its islands are a constant source of inspiration for creating unique and collectable stamp issues. Since our postal dependence in 1869 Guernsey Post has built a global reputation for the quality of their stamps and the diversity of the subjects covered.

Guernsey Old Maps - John Speed's Gurnsey 1611

John Speed was one of the most famous British mapmakers of the 17th century and is best known for his ingenuity. 'A chart of the Island of Great Britain' atlas of 1611. Considered over 25 years as one of the most influential atlases of the British Isles ever made. On the Bailiwick map local towns and places are clearly visible although some have evolved more than others.

ÅLAND

Åland is situated at the heart of the Baltic Sea. The archipelago consists of more than 6,500 skerries and islands, but less than 60 of them are inhabited. Bridges and cable ferries link many islands, while car ferries connect the more remote islands of the archipelago. One of the best ways to explore the unspoiled nature, varied landscape and red granite cliffs is by boat. Sailing in Åland makes for an interesting exercise in navigation, and up-to-date marine charts are important when cruising around the islands.

Historical nautical chart

The stamp shows a hand-made nautical chart from 1747 from the collections of Swedish Military Archives. The map was drawn up by Swedish pilot officer Jonas Hahn (1703–1759). Rodhamn is situated some 10 nautical miles off Mariehamn and has served as a sheltered harbour for seafarers throughout the centuries as seen in the top image from Åland Museum. Today, it is a popular guest marina.

MALTA

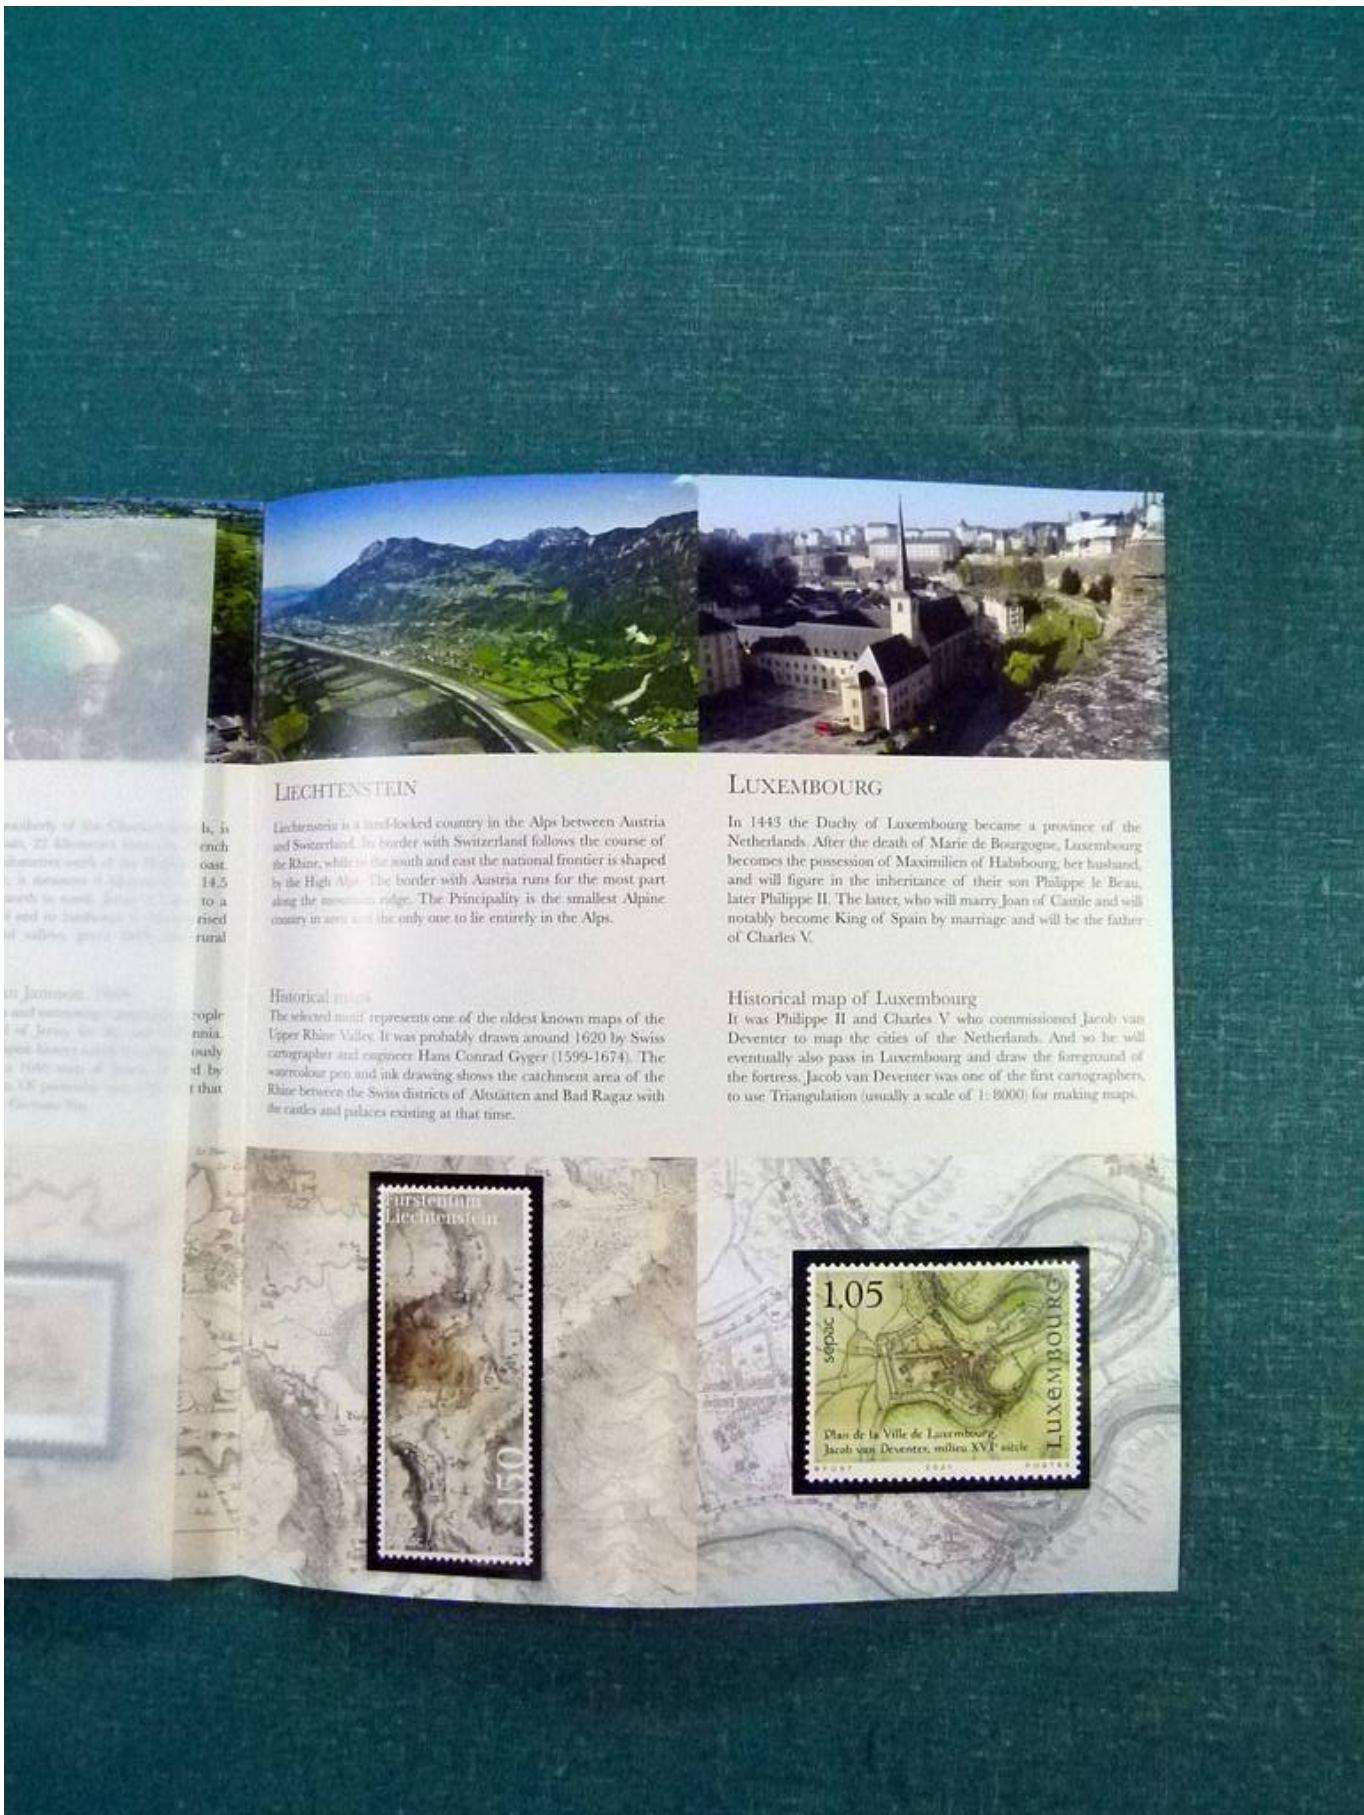

Strategically located in the middle of the Mediterranean Sea Malta has one of the most unique and varied history in the world. Nearly every major power who dominated the region has left a cultural imprint: the Phoenicians, Romans, Arabs, Aragonese, Knights of St. John, the French and, finally the British. It achieved independence from the United Kingdom in 1964, became a Republic in 1974 and joined the European Union in 2004 – adopting the Euro as its national currency in 2008.

Historical Map of Malta

Throughout the years different European cartographers managed to map the Maltese island. The SEPAC stamp features a map drawn by a Dutch cartographer Johannes Janssonius. This was first published in Amsterdam in c.1650 and bears the title 'INSLVIAE MELITAE Volgo MALTE Nova et accurata Descriptio' within a highly decorative cartouche. It also shows the arms of the Order of Saint John and an inset plan of Valletta.

Liechtenstein is a landlocked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the High Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine country in area and the only one to lie entirely in the Alps.

Historical maps

The selected motif represents one of the oldest known maps of the Upper Rhine Valley. It was probably drawn around 1620 by Swiss cartographer and engineer Hans Conrad Gyger (1599-1674). The watercolour pen and ink drawing shows the catchment area of the Rhine between the Swiss districts of Altstätten and Bad Ragaz with the castles and palaces existing at that time.

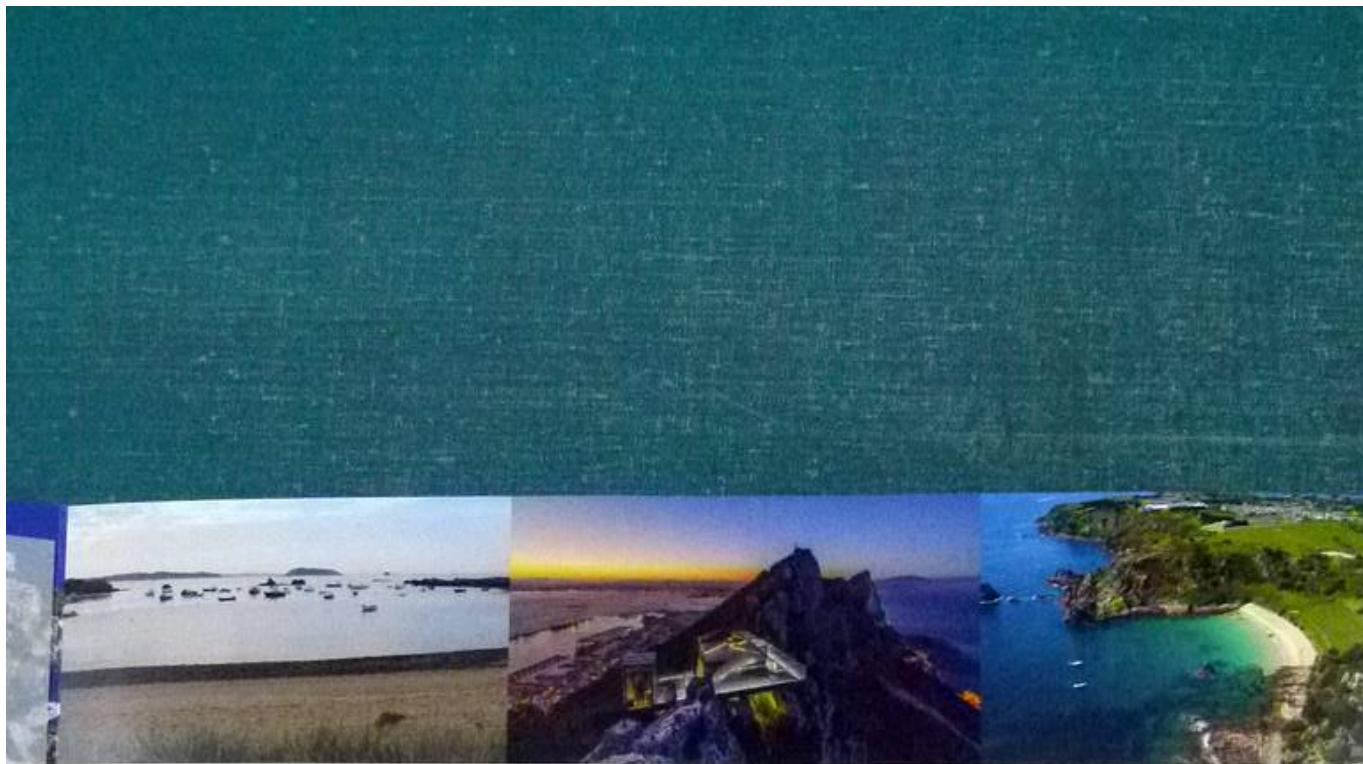

LUXEMBOURG

In 1443 the Duchy of Luxembourg became a province of the Netherlands. After the death of Marie de Bourgogne, Luxembourg becomes the possession of Maximilian of Habsbourg, her husband, and will figure in the inheritance of their son Philippe le Beau, later Philippe II. The latter, who will marry Joan of Castile and will notably become King of Spain by marriage and will be the father of Charles V.

Historical map of Luxembourg

It was Philippe II and Charles V who commissioned Jacob van Deventer to map the cities of the Netherlands. And so he will eventually also pass in Luxembourg and draw the foreground of the fortress. Jacob van Deventer was one of the first cartographers to use Triangulation (usually a scale of 1: 8000) for making maps.

GUERNSEY

The Bailiwick of Guernsey, which includes Guernsey, Alderney, Sark and Herm, is self-governing, has its own currency and stamps and enjoys the same level of independence it has had since 1066. The Islands are a constant source of inspiration for creating memorable and collectable stamp issues. Since our postal independence in 1969, Guernsey Post has built a global reputation for the quality of their stamps and the diversity of the subjects covered.

Guernsey Old Maps - John Speed's Garmsey 1611
John Speed was one of the most famous British mapmakers of the 17th century and is best known for his important 'Theatre of the Empire of Great Britaine' atlas of 1611. Assembled over 15 years it is one of the most influential atlases of the British Isles ever published. On the Bailiwick map local names and places are still recognisable although some have evolved more than others.

Gibraltar

Standing 340 metres directly above sea level, Gibraltar's Skywalk offers breath-taking 360° views spanning three countries and two continents and links to other sites within the Gibraltar Nature Reserve, Upper Rock including the thrilling Windsor Suspension Bridge and the famous Apes' Den via a series of walking trails. Built on the foundations of an existing WWII base structure, the Skywalk is designed to withstand wind speeds of over 150km/hour.

Gibraltar Historic Maps

The Gibraltar Historic Maps one pound stamp features an ancient map of Gibraltar which forms part of a set of five stamps. The maps featured on the stamps can be found exhibited at the Gibraltar National Archives and the one-pound stamp carries the official SEPAC logo.

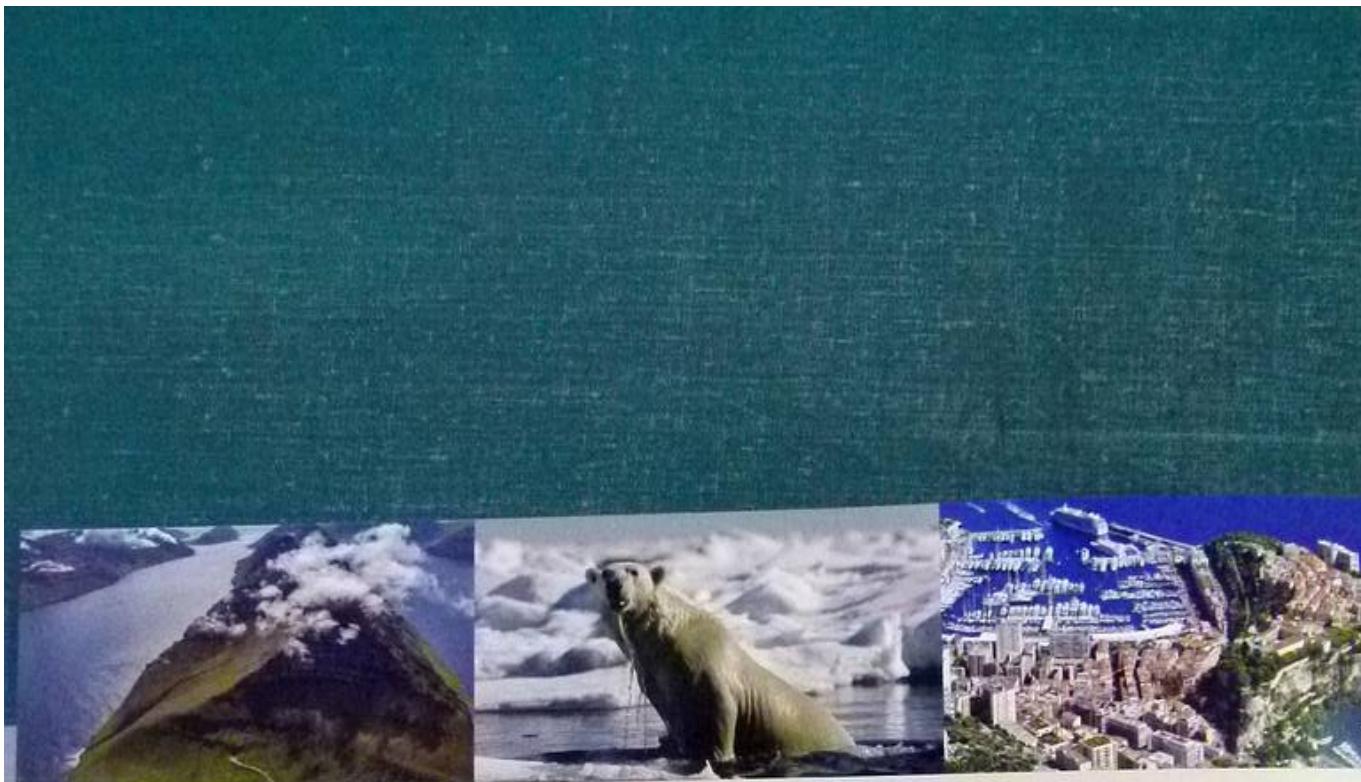

JERSEY

Jersey, the largest and most southerly of the Channel Islands situated in the Bay of St Malo, 22 kilometres from the coast of Normandy and 137 kilometres south of the UK. Roughly rectangular in shape, it measures 8 kilometres by 5.5 kilometres and is tilted from north to south. Jersey's population of around 110,000 and its landscape is characterised by dramatic coastlines, inland valleys, green fields and countryside.

Historic Jersey Maps - Jan Jansson, 1646
Known for its dangerous waters and interesting topography Jersey has been mapping the island of Jersey for the past 400 years. However, Jersey's early cartographic history could be even longer. The stamp shows a 1646 map of Jersey by Dutch cartographer Jan Jansson. Of particular note is that Jansson places the Island in the German Sea.

Foto nr.: 50

FAROE ISLANDS

The Faroe Islands is an archipelago of 18 mountainous islands located halfway between Iceland and Scotland in the North Atlantic Ocean. The first known settlers, according to stories passed down through generations, were Irish monks in the sixth century. Today the islands' population of 52,000 is spread out across the 17 inhabited islands. These islands are connected by excellent infrastructure linked together by a comprehensive road network and tunnel and ferry connections.

Faroe Islands on historical maps II

The stamp illustrates Sebastian Münster's map "Septentrionales regiones" from 1578. Sebastian Münster (1488-1552) was the most important geographer of the sixteenth century. He was also famous for his iconic chart of sea monsters and beasts, both mythical creatures and real. His Cosmographia, published in 1544, spread geographical knowledge wide over Europe. He died May 1552 in Basel of the Black Death.

Greenland

Greenland is the world's largest island with a total area of approx. 2.2 million sq. km. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. FAROE ISLANDS

The Faroe Islands is an archipelago of 18 mountainous islands located halfway between Iceland and Scotland in the North Atlantic Ocean. The first known settlers, according to stories passed down through generations, were Irish monks in the sixth century. Today the islands' population of almost 54,000 is spread out across the 17 inhabited islands. The islands are connected by excellent infrastructure linked together by a comprehensive road network and tunnel and ferry connections.

Local beverages

The old Faroese brewery Føroya Þjóð (1888) has for almost a century and a half supplied the Faroese with beverages, be it beer or soft drinks of various kinds - and in recent years, stronger liquors which enjoy great success in the domestic market.

The stamp features Simun í Vágí who started the brewery and designed the iconic logo, the Faroese ram which also is featured on the stamp.

GREENLAND

Greenland is the world's largest island with a total area of approx. 2.2 million sq. km. The Greenland ice sheet is the second largest in the world. With the exception of a few sheltered valleys in the south, the climate is arctic and the average temperature during the warmest month of the year does not exceed 10°C. With a population of 57,000 it is the least densely populated country in the world.

Bottled Greenland Ice Cap Water

The water from the Greenland ice sheet is packaged in bottles of various sizes. It creates drinking water of an outstanding quality. Bottled Greenlandic ice cap water is sold as a product, both in Greenland and on the international market. Artist Lisbeth Karline has in a very creative manner painted the stamp design. In the process, she melted ice collected in the nearby harbour of Ilulissat.

MONACO

Located in Southern Europe on the Northern coast of the Mediterranean Sea, the Principality of Monaco is a hereditary monarchy headed by H.S.H. Prince Albert II. It is the second smallest country, by size, in the world. The Principality offers a cosmopolitan international lifestyle. A gateway to luxury, Monaco of 139 different nationalities have decided to make their home: www.octp-monaco.com

Monegasque beer

In order to illustrate the common theme of "local beverages", a postage stamp of the Principality of Monaco pays tribute to Monegasque beer, made since 1905 at the former brewery in the Fontvieille district.

Foto nr.: 52

GUERNSEY

The Bailiwick of Guernsey, which includes Guernsey, Alderney, Sark and Herm, is self-governing, has its own currency and stamps and enjoys the same level of independence it has had since 1066. The Islands are a constant source of inspiration for creating memorable and unique stamps. Since our postal independence in 1969 Guernsey has built a global reputation for the quality of their stamps and the diversity of the subjects covered which includes our first ever stamp this year.

Guernsey's new pale lager Breda Beer

Seagulls are very clever creatures with a keen sense of smell, great vision and have a taste for human food. Our roguish Seagull is seen trying to steal from a glass of delicious Breda beer. Guernsey's Breda beer won a silver award at the International Brewing Awards back in 2013. Rendall's Brewery have been turning mashed barley, hops, water and yeast into this popular 5% abv pale lager since 2008.

ÅLAND

Åland is situated at the heart of the Baltic Sea. The archipelago province savours its local culinary heritage and has many small-scale producers of food and beverages. Due to long mild autumns, it is possible to cultivate many kinds of crops in Åland. The islands are considered to be the apple orchard of Finland. Cheese and other dairy products, craft beers, ciders, juices, lemonades, chocolates, and bonbons flavoured with fruit and berries such as apples, pears, sea-buckthorn, lingonberries, or blackcurrants are examples of Åland delicacies.

Sea-buckthorn juice

Åland is one of a few areas in Finland where sea-buckthorn grows wild. It thrives on sandy and pebbly beaches. Sea-buckthorn is the most nutritious wild berry growing in Finland, containing essential vitamins, antioxidants, and fats. Juices and other products are made from pressed sea-buckthorn berries. For the stamp image, photographer Tiina Tahvanainen used her grandmother's 100-year-old juice bottles filled with sea-buckthorn juice.

JERSEY

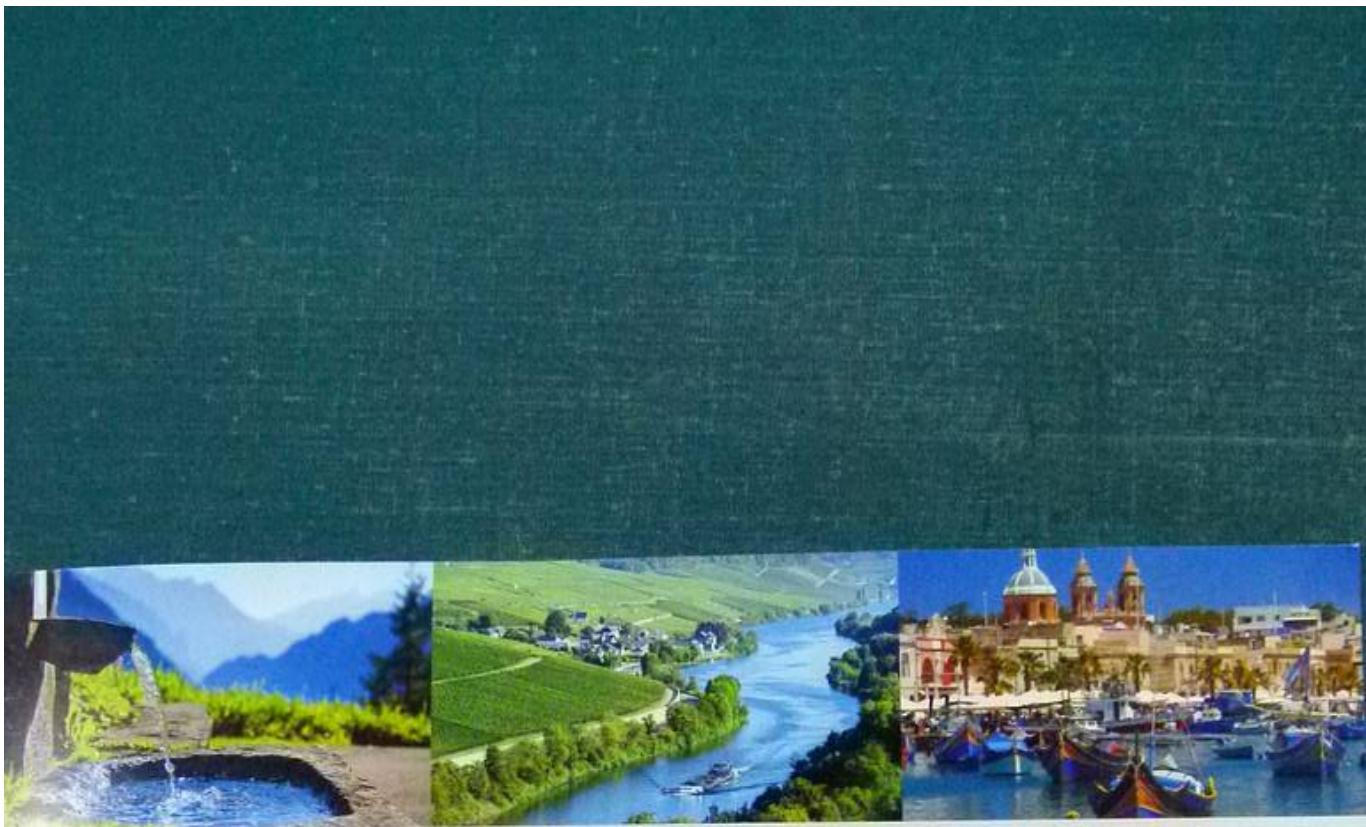

Said to be the sunniest place in the British Isles, Jersey lies 30 kilometres from the French coast of Normandy. The location allows visitors to benefit from its close proximity to the United Kingdom whilst enjoying a feel of continental Europe. Jersey's unique geographic location provides lots of sunlight and, as such, the Island has a vibrant agriculture and a long culinary tradition which encompasses Jersey Royal potatoes, Jersey dairy and local cider.

Jersey Cider

Cider has been made in Jersey, from locally grown apples, for at least 500 years. At one time, cider making was a major industry. Apple crushers can still be found around the island, although few are still used for their intended purpose. A cider crusher and cider press at Hampton Court Live Music brought to life each year for the annual Jersey Cider Festival. Fresh cider is made and Jersey's cider heritage is celebrated.

LIECHTENSTEIN

Liechtenstein is a land-locked country in the Alps between Austria and Switzerland. Its border with Switzerland follows the course of the Rhine, while to the south and east the national frontier is shaped by the Alps. The border with Austria runs for the most part along the mountain ridge. The Principality is the smallest Alpine state and the only one to lie entirely in the Alps.

Local beverages

Although unimaginable for most people in many parts of the world, people in the Alps enjoy drinking fresh water straight from the tap. In Liechtenstein, about half of the drinking water consumed each year is obtained from groundwater, the other half from spring water. The strictest controls and continuous optimisation of the supply technology ensure a high standard of quality of the drinking water.

LUXEMBOURG

The Moselle extends to the east of the country. The region is named after the river that forms the 42km natural border between the Grand Duchy and Germany. However, this peaceful watercourse is anything but a dividing line. It reflects the open character of a region in which one of the most important means of the European unification process was signed: the Schengen Agreement.

With its relatively mild climate, the Moselle valley is above all a traditional wine-growing region

Moselle wines

The Luxembourg Moselle is best known for its white, still and sparkling wines. Riesling, a racy and fruity wine with mineral notes, is probably the most famous of the country's wines. Luxembourg has a wide range of grape varieties and thus offers amateurs an assortment for all tastes.

MALTA

Strategically located in the middle of the Mediterranean Sea, Malta has one of the most unique and varied history in the world. Nearly every major power who dominated the region has left a cultural imprint: the Phoenicians, Romans, Arabs, Aragonese, Knights of St. John, the French and, finally the British. It achieved independence from the United Kingdom in 1964, became a Republic in 1974 and joined the European Union in 2004 – adopting the Euro as its national currency in 2008.

Local beverages

Kinnie, Malta's own favourite soft drink, is a unique tasting bitter-sweet soft drink with orange flavouring and aromatic herbs. The Kinnie portfolio is produced, marketed, and distributed by Simonds Farsons Cisk plc.
